Chem

Name	Value	Units	Range	Abnormal
Rubella Virus Ab IgG	POSITIVE	AI		
Interpretation: INTERPRETATION(S): Negative: Patient is presumed to be non-immune to Rubella infection Equivocal: Obtain an additional sample for re-testing Positive: Patient IgG levels are consistent with immunity to Rubella infection				

Varicella Zoster Virus Ab Negative

Interpretation:**INTERPRETATION(S): Interpretation:**

Negative: Patient is presumed to be non-immune or has not had prior exposure to the respective virus.

Equivocal: IgG status not determined for respective analyte. Obtain an additional sample within 2-3 weeks for re-testing.

Positive: Patient considered immunized to respective virus either through previous viral exposure or vaccination.

Comments: This test is used for assessment of IgG antibody production due to vaccination-induced immunity or past exposure to the Measles, Mumps, Rubella, or VZV viruses. This assay is performed on the BioPlex 2200. Icteric, lipemic, hemolyzed or heat inactivated sera can cause erroneous results and should be avoided.

Rubeola Virus Ab IgG	Equivocal
Mumps Virus Ab IgG	Positive

Hepatitis B Virus Surface Ag on 05 Apr 2021

Collection Date: 05 Apr 2021

Site/Specimen: SERUM

Ordering Clinician: LONG, JEFFERY
R.Comment:
Chem

Name	Value	Units	Range	Abnormal
Hepatitis B Virus Surface Ag	NONREACTIVE/NEGATIVE			

Interpretation:

Heterophilic, e.g. human anti-mouse, antibodies in the serum or plasma of certain individuals are known to cause interference with immunoassays. These antibodies may be present in blood samples from individuals regularly exposed to animals or who have been treated with animal serum products.

Individuals recently vaccinated for hepatitis B may give a transient positive result for HBsAg because of its presence in the vaccine.

HBsAg results should only be used and interpreted in the context of the overall clinical picture. A negative test result does not exclude the possibility of exposure to or infection with hepatitis B virus. Levels of HBsAg may be undetectable both in early infection and late after infection. In rare cases HBsAg tests do not detect certain HBV mutant strains.

PHILLIP

Comment:

Chem

Name	Value	Units	Range	Abnormal
SARS-CoV-2 Ag	NEGATIVE			

Interpretation:

This test detects both viable (live) and non-viable, SARS-CoV and SARS-CoV-2. Test performance depends on the amount of virus (antigen) in the sample and may or may not correlate with viral culture results performed on the sample.

A negative test result may occur if the level of antigen in a sample is below the detection limit of the test.

False negative results may occur if a specimen is improperly collected, transported, or handled.

Positive results do not rule out co-infections with other pathogens.

Positive test results do not differentiate between SARS-CoV and SARS-CoV-2.

This test has not been FDA cleared or approved. This test has been authorized by FDA under an EUA for use by laboratories certified under CLIA 1988.

Aspartate Aminotransferase	17	U/L	(14-52)
GFR Calculated	105		

Interpretation:

>=90 mL/min/1.73m2 = Normal
60 -89 mL/min/1.73m2 = Mildly decreased GFR
30-59 mL/min/1.73m2 = Moderately decreased GFR
15-29 mL/min/1.73m2 = Severely decreased GFR
< 15 mL/min/1.73m2 = Kidney failure

This is an estimated glomerular filtration rate (eGFR) only. The value has been derived from the Chronic Kidney Disease - Epidemiology (CKD-Epi) Collaboration Equation. The calculation automatically takes patient sex into account, but CHCS cannot automatically adjustment the formula for African American (AA) patients, therefore two GFR results are reported - GFR-NON AA(GFR CALC) and GFR-AA(GFR CALC AA). As with all estimations, results may not be valid for certain sub-groups including: pediatric patients (0-17 years old), severely hypoalbuminemic patients, patients not in steady state (including acute renal failure), dialysis patients, and patients with atypical body habitus. Results will not be reported on patients under 18 years of age.

Some pharmacological therapeutics are dosed based on older versions of the eGFR. Where deemed necessary, refer to Pharmacy for assistance or more information.

GFR Calculated Black	120

JONATHAN ADIN

Comment:

Chem

Name	Value	Units	Range	Abnormal
Glucose-6-Phosphate Dehydrogenase	15.2	U/g Hgb	7-20.5	

Interpretation:**INTERPRETATION(S): All persons below our lower limit of 7 are considered "Deficient".**

Values greater than the upper limit of our reference range are considered "Normal" in accordance with guidance from the Tietz Textbook on Clinical Chemistry, which states that values greater than the upper limit of the reference range are encountered in any condition associated with younger than normal RBC's (as in hemolytic anemias not due to G6PD deficiency), but are of no clinical significance.

Specimen: 3-5 mL whole blood (EDTA tube, Lavender top - do not use twist-off caps). Do not freeze G6PD samples. Refrigerated samples are good for only 7 days; ship ASAP after collection. Excessive leukocytes or platelets, which are high in G6PD, may interfere in the assay. Reticulocytes have higher G6PD levels than mature erythrocytes, so samples should not be collected after a severe hemolytic crisis.

G6PD reported value is a calculation based on G6PD and hemoglobin values.

This test was developed and its performance characteristics evaluated by BAMC Reference Chemistry Laboratory. It has not been cleared or approved by the U.S. Food Drug Administration (FDA). FDA does not require this test to go through premarket FDA review. The test is used for clinical purposes and should not be regarded as investigational or for research.

This laboratory is certified under the Clinical Laboratory Improvement Amendments of 1988 ("CLIA") as qualified to perform high complexity clinical laboratory testing.

Report Text

Transabdominal sonographic images of the pelvis with no prior exam for comparison. There is a single live intrauterine pregnancy in the fundal aspect of the uterus. A small subchorionic hemorrhage is present. The crown-rump length of the fetus measures 1.5 cm. A yolk sac is identified. The fetal heart rate is normal at 169 bpm. The right ovary is unremarkable. There is a probable corpus luteal cyst on the left. Normal vascular flow seen within the bilateral ovaries with color and spectral Doppler. No pelvic free fluid.

IMPRESSION: Single live intrauterine pregnancy with estimated gestational age by crown-rump length measurement of 7 weeks and 6 days corresponding to an EDD of 12/2/2021.

Report Text

MRI of the brain without contrast with no prior exam for comparison. There is normal signal throughout the brain parenchyma. No evidence of a mass. The ventricles, sulci and subarachnoid cisterns are normal in size and configuration. No restricted diffusion. No susceptibility artifact. There is a small mucous retention cyst in the left maxillary sinus.

IMPRESSION: Unremarkable noncontrast MRI of the brain.

Report Text:

Transabdominal sonographic images of the pelvis with no prior exam for comparison. There is a single live intrauterine pregnancy in the fundal aspect of the uterus. A small subchorionic hemorrhage is present. The crown-rump length of the fetus measures 1.5 cm. A yolk sac is identified. The fetal heart rate is normal at 169 bpm. The right ovary is unremarkable. There is a probable corpus luteal cyst on the left. Normal vascular flow seen within the bilateral ovaries with color and spectral Doppler. No pelvic free fluid.

IMPRESSION: Single live intrauterine pregnancy with estimated gestational age by crown-rump length measurement of 7 weeks and 6 days corresponding to an

Screening Last Updated by BOATRIGHT, BROOKE ANN @ 31 Mar 2021 1052 CDT

Reason(s) For Visit (Chief Complaint): Education About Health Care (New): Initial Coaching Session;

LMP: 10 Jan 2020.

S/O Note Written by BOATRIGHT, BROOKE ANN @ 31 Mar 2021 1053 CDT

Reason for Visit

Visit for: Initial Coaching Session.

Subjective

Client desires to know body composition and lose body fat, weight.

A/P Written by BOATRIGHT, BROOKE ANN @ 31 Mar 2021 1053 CDT

1. Other specified counseling Z71.89

Procedure(s): - (96160) Prev Medicine Admin Of Health Risk Questionnaire Patient-Focused

Note Written by BOATRIGHT, BROOKE ANN @ 31 Mar 2021 1103 CDT

Client arrived for Initial Coaching Session. Educator thanked client for filling out AWC HWT and explained the value of this tool. Educator went over AWC staff's credentials, scope of practice, and AWC mission/purpose. Client and educator discussed session agenda, the coaching model/relationship and expectations going forward. Educator addressed client's expectations moving forward. Reviewed and administered Health Assessment with client. #####Client is identified as Low Risk per ACSM Risk Stratification. Client may require medical clearance for exercise testing. Client wants to know what her bfp is and also wants to know how many calories she should be consuming in order to lose weight. #####NUTRITION: Client cooks at home half the time and eats out half the time. When she cooks at home she tends to cook chicken and veggies, and eat healthier. However, when she eats out, she stated it is not healthy. FITNESS: PT, weight lifting and running. SLEEP: 6 hours, but she says it varies from 4-6. Educator informed her the goal is 7-9 and asked if she would be willing to try and improve her sleep. She said she would try to go to bed earlier and get at least 7. STRESS: Pretty high right now bc she just recently switched units and has a new job, she is the maintenance platoon leader and has more responsibility, so with responsibility comes stress. #####Client Goals: lose bfp, she will set a goal after she does the bodpod. ##### Client states confidence in this/these goal(s) as: n/a out of 10. Client motivators: n/a. #####Client's current exercise: WL 2x/wk for 25 min. Running 2x/wk @10m/m for 20 min. #####Discussed AWC resources available to client and made the following recommendations based on client's goals and health concerns: Resting Metabolic Analysis, Body Composition Testing, Fueling for Health Class. Coaching Skills utilized during session: Active Listening, Open-Ended Inquiry. Health Coaching topics covered: Nutrition, Physical Activity/Fitness, Sleep, Stress, Tobacco. Coaching Time: 30 BAK

Disposition Written by BOATRIGHT, BROOKE ANN @ 31 Mar 2021 1054 CDT

Disposition: Released w/o Limitations

Follow up: as needed in the ARMY WELLNESS CENTER clinic. - Comments: Encouraged client to return for follow up in 30 days for Resting Metabolic Analysis, Body Composition Testing, Fueling for Health Class, Performance Optimization.

Discussed: Alternatives with Patient who indicated understanding. - Comments: Educator offered health coaching and information pertaining to client's health and wellness goals. Educator addressed client's questions and concerns.

Health and Wellness

Health and wellness goals: Lose Body Fat, Increase Strength, Gain Muscle, Lose Weight, General Fitness

Smoking and Drinking Habits

Tobacco use habits: Never Smoked

Alcohol Consumption

Safety

How often do I drive after drinking? Not once during the past year

How often do I use a seat belt when I drive or ride as a passenger in a car? Always

How often do I wear a helmet when you ride a motorcycle, all-terrain vehicle, or bicycle? Always

Dietary Habits

About how many cups of fruits and vegetables do I eat per day? One

How often do I eat high fiber foods? 3-5 days a week

How often do I eat low-fat foods? 3-5 days a week

How often do I eat high sugar desserts? 3-5 days a week

How often do I eat high fat desserts? Less than 3 days a week

How often do I eat foods high in sodium? 3-5 days a week

Exercise Habits

I currently exercise.

I engage in moderate intensity aerobic activity 180 minutes per week.

I engage in vigorous intensity aerobic activity 180 minutes per week.

I engage in muscle strengthening activities 120 days per week.

Other

I get 6 hours of sleep per night

Army Physical Fitness Test (APFT) Performance

Testing Date: 7/10/2019

Two Mile Run Event Completed: Yes

Two Mile Run Time: 15:30

Pushup Event Completed: Yes

Total pushups: 35

Situp Event Completed: Yes

Total situps: 60

Did you pass this APFT? Yes

What was the minimum number of points required to pass this APFT? 180

Met 2 Mile MSK Injury Risk Criteria – No

2-mile run time was good

Did not meet 2-mile run time criteria for musculoskeletal injury risk

ACSM Risk Stratification - Low

Your risk for cardiovascular disease is Low

Perceived Stress Scale - High

How often have you been upset because of something that happened unexpectedly? Sometimes (2)

How often have you felt that you were unable to control the important things in your life? Sometimes (2)

How often have you felt nervous and stressed? Fairly Often (3)

How often have you felt confident about your ability to handle your personal problems? Fairly Often (1)

How often have you felt that things were going your way? Sometimes (2)

How often have you found that you could not cope with all the things you had to do? Never (0)

How often have you been able to control irritations in your life? Fairly Often (1)

How often have you felt that you were on top of things? Fairly Often (1)

How often have you been angered because of things that were outside of your control? Almost Never (1)

How often have you felt difficulties were piling up so high that you could not overcome them? Fairly Often (3)

Self Efficacy Scale

Improve my physical fitness: Almost Always True (7)

Improve my diet and nutrition habits: Almost Always True (7)

Improve my stress management skills: Almost Always True (7)

Quit or cut back on tobacco use: N/A (N/A)

Improve my sleeping habits: Usually True (6)

Drink alcoholic beverages in moderation: N/A (N/A)

Yessenia is a 22 years old female referred to our clinic for self-reported seizure event

On the end of August patient was going through the drive-through Covid 19 testing which is needed as a routine check. She did have the nasal swab and immediately felt lightheaded after that her husband said she was gasping for air and her whole body shook for few seconds then she tried to speak but nothing came up for

Progress Notes (continued)

Radhi, Fatma A, MD at 11/30/2020 8:00 AM (continued)

few seconds then she woke up and in the first few seconds she was confused and did not know where she was but after that she was back completely to normal. Patient went to the emergency room after that and had MRI of the brain that we reviewed today which was normal. She also had EKG that showed normal sinus rhythm she also had normal CBC and CMP as per the referral documents

Patient previously had fainting events on 2 occasion 1 time when she was giving blood and another time when she received shots. Patient is concerned because her maternal grandfather had brain aneurysm

No history of brain concussion or childhood seizure disorder

Past Medical History

The patient has no past medical history on file.

No past surgical history on file.

Medication

No outpatient medications have been marked as taking for the 11/30/20 encounter (Initial consult) with Radhi, Fatma A, MD.

Allergies

No Known Allergies

Family History

The family history includes No Known Problems in her father and mother; Other in her maternal grandfather.

Social History

The patient reports that she has never smoked. She has never used smokeless tobacco. She reports that she does not drink alcohol or use drugs.

Patient's medications, allergies, past medical, surgical, social and family histories were reviewed and updated as appropriate.

Report Text:

MRI of the brain without contrast with no prior exam for comparison. There is normal signal throughout the brain parenchyma. No evidence of a mass. The ventricles, sulci and subarachnoid cisterns are normal in size and configuration. No restricted diffusion. No susceptibility artifact. There is a small mucous retention cyst in the left maxillary sinus.

IMPRESSION: Unremarkable noncontrast MRI of the brain.

1. Syncope and collapse

Plan/Comment(s): - Patient was contacted via phone for TeleHealth encounter. Patient was verified by full name and DOB. The patient was not examined today due to CDC social distancing recommendations in light of the COVID-19 pandemic.

22 yo active duty female with self-reported seizure event that occurred approx 3 days ago. The patient reports that shortly after undergoing a nasopharyngeal swab for COVID-19 screening she lost consciousness and was witnessed "convulsing" on the ground for 15-20 seconds by her spouse. She states that she felt confused and extremely exhausted after the event. She does not recall the event specifically, and does not recall having an aura. EKG performed in the ED following the event NSR. CBC/CMP WNL. Pt endorses family history of unspecified neurological disorders.

Medical Record

AMIEVA, YESSANIA

DOB: 19 May 1998 SSN: ***-**-1668 DoD ID: 1548801377

Created: 04 Aug 2023

Patient adamantly requests a neurological consultation and evaluation. Discussed with the patient that most likely her event was vasovagal in nature, as she has a previous history of vasovagal syncope with immunization. However, I think it is reasonable to request further workup as the patient does endorse a family history and will be required to be in an austere environment due to her occupation. No seizure precautions/profile indicated at this time due to etiology most likely being vasovagal in nature, however we did discuss strict return precautions. Pt agreed to proposed plan of care. All questions are answered to the patient's satisfaction.

Radiology(ies):

S/O Note Last Updated by PITTMAN, TIFFANY LEA @ 03 Sep 2020 1427 CDT**Chief complaint**

The Chief Complaint is: Neurology Referral.

History of present illness

The Patient is a 22 year old female.

LATE ENTRY: ASSESSMENT PERFORMED -- 02SEP2020

Medic Note- PT is a 22 year old female contacted over the phone for a second opinion on an ER follow up. PT was seen in the ER on 29AUG2020 for seizure like symptoms. She received a Covid-19 test on 29AUG2020 when she started to feel dizzy for 10 seconds then was observed to be convulsing, gasping and then freezing for 1 minute. There was no trauma to the head.

PROVIDER NOTE (PA-C): I agree with the above stated assessment (I have reviewed the assessment for historical accuracy but not for spelling errors).

Visit is not deployment-related. Military duty-related information A PHA has been completed in past year.

Pain currently 0/ 10 (no pain).

She does not think she may be pregnant.

DoD/VA Pain Rating Scale: Past week pain severity 0/ 10 - No pain.

....

Attending Physician: CPT Pittman. Discussed with attending who concurs with the plan.

YES - Patient is able, motivated, and willing to learn about their healthcare.

PHQ-2 Depression Screen Negative. Score:0.

Patient HAS NOT been in a situation where they were being verbally or physically hurt, threatened, or made to feel afraid.

Patient has received other care since their last visit with this clinic.

Patient is NOT currently on a profile/limited duty chit.

Current medication

Ethinyl Estradiol + Norgestimate, (Ortho Tri-Cyclen Lo), Tablet, Oral

1. Syncope and collapse

Plan/Comment(s):

- Patient was contacted via phone for TeleHealth encounter. Patient was verified by full name and DOB. The patient was not examined today due to CDC social distancing recommendations in light of the COVID-19 pandemic.

22 yo active duty female with self-reported seizure event that occurred approx 3 days ago. The patient reports that shortly after undergoing a nasopharyngeal swab for COVID-19 screening she lost consciousness and was witnessed "convulsing" on the ground for 15-20 seconds by her spouse. She states that she felt confused and extremely exhausted after the event. She does not recall the event specifically, and does not recall having an aura. EKG performed in the ED following the event NSR. CBC/CMP WNL. Pt endorses family history of unspecified neurological disorders.

Patient adamantly requests a neurological consultation and evaluation. Discussed with the patient that most likely her event was vasovagal in nature, as she has a previous history of vasovagal syncope with immunization. However, I think it is reasonable to request further workup as the patient does endorse a family history and will be required to be in an austere environment due to her occupation. No seizure precautions/profile indicated at this time due to etiology most likely being vasovagal in nature, however we did discuss strict return precautions. Pt agreed to proposed plan of care. All questions are answered to the patient's satisfaction.

Radiology(ies):

- Order Date: 09/03/2020 14:33 ; Procedure: MRI, BRAIN (WO CONTRAST)PKG; Clinical Impression: 22 yo active duty female with self-reported seizure event that occurred o/a 8/29/2020. Pt we reported history of repeat syncopal episodes.; Priority: Routine; Start Date: 09/03/2020

Consult(s):

- Referred To: NEUROLOGY (Routine); Specialty: NEUROLOGY; Clinic: SPEC-NETWORK; Provisional Diagnosis: Syncope and collapse; Order Date: 03 Sep 2020 1432

Disposition Written by PITTMAN, TIFFANY LEA @ 03 Sep 2020 1436 CDT

Disposition: Released w/o Limitations

Follow up: as needed .

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding.

Administrative Options: Consultation requested

Chief complaint

The Chief Complaint is: Neurology Referral.

History of present illness

The Patient is a 22 year old female.

02SEP2020

Medic Note- PT is a 22 year old female contacted over the phone for a second opinion on an ER follow up. PT was seen in the ER on 29AUG2020 for seizure like symptoms. She received a Covid-19 test on 29AUG2020 when she started to feel dizzy for 10 seconds then was observed to be convulsing, gasping and then freezing for 1 minute. There was no trauma to the head.

Visit is not deployment-related. Military duty-related information A PHA has been completed in past year.

Pain currently 0/ 10 (no pain).

She does not think she may be pregnant.

DoD/VA Pain Rating Scale: Past week pain severity 0/ 10 - No pain.

....

Attending Physician: CPT Pittman. Discussed with attending who concurs with the plan.

YES - Patient is able, motivated, and willing to learn about their healthcare.

PHQ-2 Depression Screen Negative. Score:0.

Patient HAS NOT been in a situation where they were being verbally or physically hurt, threatened, or made to feel afraid.

Patient has received other care since their last visit with this clinic.

Patient is NOT currently on a profile/limited duty chit.

Current medication

Ethinyl Estradiol + Norgestimate, (Ortho Tri-Cyclen Lo), Tablet, Oral

The Chief Complaint is: F/u from ER.

History of present illness

The Patient is a 22 year old female.

22 year old female present to the clinic today for a f/u from the ER. SM states that she went to the ER after having a seizure during her Covid test. She states that during her test, she passed out and started convulsing. SM spouse states that she convulsed for about 15-20 seconds, was pretty out of it, and couldn't speak when she came too about 1 minute later. States that they had them pull aside and then instructed them to go to the ER to be further evaluated. SM states hasn't had any other issues since then.

A/P Last Updated by MCMILLAN, TYLER S @ 01 Sep 2020 1601 CDT

1. Syncope and collapse R55

Plan/Comment(s): - 22 yo F presents for ER follow up accompanied by her spouse. Transient LOC lasting 10-15 seconds witnessed by spouse during COVID swab, regaining lucidity in about one minute. History of vasovagal syncope with immunizations. Had not eaten prior to covid swab. Presentation is typical for vasovagal syncope. Complete neuro exam including cranial nerves normal. Has upcoming NTC rotation and they are concerned about this. Her and husband are persistent in requesting a neurology referral. I do not feel that this is necessary given the presentation and do not feel that she needs any profile restrictions. I have advised her to inform nurse any time she receives an immunization or blood draw and to eat and stay hydrated prior. I have encouraged her to seek a second opinion and/or NTC concerns. PVUA.

2. Encounter for issue of repeat prescription Z76.0

Plan/Comment(s): - Advised patient to use back up contraception while taking antibiotic.
Medication(s): - Medication: TRI-LO-SPRINTEC EQ-TRIPHASIC ORAL TAB; SIG: TAKE ONE TABLET BY MOUTH EVERY DAY #3 RF1; Comment: please issue 90 day supply

Transition of Care

LMP: 10 Jan 2020.

Note Written by SARNOSKI,ALEXIS JAY @ 31 Aug 2020 0922 CDT

1st attempt to contact SM on 31August2020 @ 0920 without success- unable to leave contact information due mailbox being full.

Note Written by SARNOSKI,ALEXIS JAY @ 31 Aug 2020 1028 CDT

SM was contacted via phone regarding ER visit 29August2020.

Discharge Diagnosis: Vasovagal syncope episode, UTI

SM does understands discharge diagnosis.

SM symptoms have improved since ER visit and is currently on ABT for UTI. Cpt. Fetzer was contacted regarding SM due to seizure like activity and SM was scheduled to go to NTC. ER had recommended follow up with PCM but SM is on quarantine follow up to NTC. Per Cpt. Fetzer, SM is disqualified for NTC until seen by PCM and possibly Neurology. SM was scheduled an appt on 09/01/2020 @ 0940 with Dr. McMillian.

There are no new problems related to ER visit.

The ER did discharge SM with medication. Medication reconciliation completed. List of meds: Bactrim.

Discharge instructions: Increase fluids, rest, follow up with PCM closely.

SM understood discharge instructions and did not have additional questions.

There were additional testing ordered.

SM does live with someone to help with recovery.

Post discharge services were no needed.

Follow up appointment: 09/01/2020 @ 0940 with Dr. McMillian.

SM understands and agreed with purposed plan of care.

IACH-Immunization questionnaire MTF Version: 3 If any answers are "YES" to questions, it does not necessarily mean person should not be vaccinated, Refer to the ACIP guidelines or check with a provider before immunizing, if any answers are "YES". Click here to add comment on Questionnaire as a whole.

1. Is the person sick? And/or has pt. had a fever in the last 24hrs?

Mild illnesses (such as Otitis Media, Upper Respiratory Infections, and Diarrhea) or persons taking antibiotics are NOT a contraindication to vaccines. However, as a precaution with moderate or severe illness, all vaccines should be delayed until the illness has improved.

~No

2. Any allergies to vaccine components or the vaccine itself? Allergy to LATEX, Medications, Foods or Any Vaccines? (Please update AHLTA as needed).

** History of anaphylactic reaction such as hives, wheezing or difficulty breathing, or circulatory collapse or shock (not fainting) from a previous dose of vaccine or vaccine component is a contraindication for further doses** (If any are "YES" Please explain in comments section) ~No 3. Any serious reactions to any vaccines in the past? (If YES, please list in comments + update AHLTA-ALLERGY section) (History of anaphylactic reaction (see question 2) to a previous dose of vaccine or vaccine component is a contraindication for subsequent doses. History of encephalopathy within 7 days following DTP/DTaP is a contraindication for further doses of pertussis-containing vaccine. Precautions to DTaP (not Tdap) include the following: (a) seizure within 3 days of a dose, (b) pale or limp episode within 48 hours of a dose, (c) continuous crying for 3 hours within 48 hours of a dose, and (d) fever of 105 degrees F within 48 hours of a previous dose.) ~No 4. Do you have a long-term health problem with Asthma, Lung disease, Heart disease, Kidney disease, metabolic disease (e.g., Diabetes), Anemia or a Blood disorder?

Persons with any of these health conditions should NOT be given the live attenuated influenza vaccine (LAIV). Instead, they should be vaccinated with the injectable influenza vaccine.

~No N/A

5. Does person have Cancer, Leukemia, AIDS, or any other Immune system problem?

Live vaccines (e.g., MMR, Varicella, Zoster [shingles], and LAIV) are usually contraindicated in immunocompromised people. However, there are exceptions. For details, consult the ACIP recommendations.

~No

6. Has person been on high doses of steroids in the past month or anticancer drugs in the past 3 months?

In accordance with general recommendations for use of live-virus vaccines, if taking high doses of systemic steroids (i.e., 2mg/kg or greater of Prednisone) for 2 weeks or greater DO NOT vaccinate until steroid therapy has been discontinued for 1 month or longer. For details on vaccinating with live-virus vaccines to persons on anticancer drugs or stem cell transplants refer to the ACIP recommendations and or the person's provider.

~No

7. Has the pt., sibling, or a parent had a Seizure; has the child had a Brain or other Nervous System Problem?

(Dtap and Tdap are contraindicated in children who have a hx of encephalopathy within 7d following DTaP. An unstable progressive Neurologic problem is a precaution to the use of Dtap and Tdap, and a progressive neurologic disorder in a teen is a precaution to the use of Td. For children with Stable neurologic disorders (including seizures) unrelated to a vaccination, or for children with degrees F within 48 hours of a previous dose.) ~No

4. Do you have a long-term health problem with Asthma, Lung disease, Heart disease, Kidney disease, metabolic disease (e.g., Diabetes), Anemia or a Blood disorder?

Persons with any of these health conditions should NOT be given the live attenuated influenza vaccine (LAIV). Instead, they should be vaccinated with the injectable influenza vaccine.

~No N/A

5. Does person have Cancer, Leukemia, AIDS, or any other Immune system problem?

Live vaccines (e.g., MMR, Varicella, Zoster [shingles], and LAIV) are usually contraindicated in immunocompromised people. However, there are exceptions. For details, consult the ACIP recommendations.

~No

6. Has person been on high doses of steroids in the past month or anticancer drugs in the past 3 months?

In accordance with general recommendations for use of live-virus vaccines, if taking high doses of systemic steroids (i.e., 2mg/kg or greater of Prednisone) for 2 weeks or greater DO NOT vaccinate until steroid therapy has been discontinued for 1 month or longer. For details on vaccinating with live-virus vaccines to persons on anticancer drugs or stem cell transplants refer to the ACIP recommendations and or the person's provider.

~No

7. Has the pt., sibling, or a parent had a Seizure; has the child had a Brain or other Nervous System Problem?

(Dtap and Tdap are contraindicated in children who have a hx of encephalopathy within 7d following DTaP. An unstable progressive Neurologic problem is a precaution to the use of Dtap and Tdap, and a progressive neurologic disorder in a teen is a precaution to the use of Td. For children with Stable neurologic disorders (including seizures) unrelated to a vaccination, or for children with a family hx of seizures, vaccinate as usual. (-for further details please see www.cdc.gov/vaccines for further information) ~No 8. During the past year, has the person received a transfusion of blood or blood products, or been given a medicine called immune (gamma) globulin or an antiviral drug?

Certain live-virus vaccines (e.g., MMR, MMRV, Varicella, ZOS, and Flu MIST) may need to be deferred, depending on several variables. Consult the most recent ACIP recommendations on intervals between Antiviral drugs, immune globulin or blood product administration and Live Virus Vaccines.

~No

9. Are you currently Pregnant, Breastfeeding or plan to become pregnant during the next 4 weeks?

*** Live virus vaccines (e.g., MMR, VAR, ZOS, and LAIV) are contraindicated in the month before and during pregnancy. Sexually

SECTION I

What is your last name?: AMIEVA

What is your first name?: YESSENIA

What is today's date?: 07/Jan/2020

What is your date of birth?: 19/May/1998

What is your age?: 21

What is your social security number?: 595751668

What is your gender?: Female

What is your DoD ID number (formerly EDIPI)?: 1548801377

What is your service branch?: Army

What is your status?: Active Duty

What is your pay grade?: O1

What is your unit name?: C co, 304th MI BN

What is your Duty Station / Location?: Fort Huachuca, AZ

What is your Unit Identification Code (UIC)?: W1E88B

Is this your first Periodic Health Assessment (PHA)?: Yes

Are you enrolled in a secure messaging system with your health care provider (RelayHealth, MiCare, or Patient Portal)?: Dont Know

Current contact information: (Address, at least one phone, and at least one email are required; At least one phone or email must be checked) (Select preferred method): Other Phone(S)

What is your other phone number?: 786-316-8898

What is your current email address?: yessenia.amieva.mil@mail.mil

What is your current address?: 800 N Lenzner Ave, Sierra Vista

What is your current state?: AZ

What is your current zip code?: 85635

What is the name of a point of contact who can always reach you?: Joshua Journet

What is your point of contact's phone number?: 786-201-7037

What is your point of contact's email address?: joshua.journet@hotmail.com

What is your point of contact's address?: 15426 W St

What is your point of contact's state?: LA

What is your point of contact's zip code?: 71459

SECTION II

How many total deployments have you had in the past 5 years?: I Have Never Deployed

Are you going to deploy within the next 120 days?: No

SECTION III

What is your military occupational code (for example: MOS, AOC, AFSC, NEC or Designator Code)?: 35D

What are your typical military job duties (for example : driving a truck, fueling machinery, lifting heavy equipment, working on a computer)?: Office duties, lifting light equipment

Does your military specialty require an operational duty physical exam (for example: flight, jump, dive, missile, submarine, PRP, Special Forces)?: No

Are you currently enrolled in a medical surveillance/occupational health program (for example: hearing conservation, radiation health, healthcare worker monitoring, etc.)?: No

In the last 30 days how often have you consumed Sugar-Sweetened Beverages?: [1 Or 2 Servings Per Week](#)

In the PAST 30 DAYS, which of the following products have you used on at least one day? Mark all that apply.: [None](#)

Which of the following best describes your past tobacco use?: [I Have Never Used Tobacco Products](#)

Are you regularly exposed to secondhand smoke, a mixture of smoke that comes from the burning end of a cigarette, cigar, or pipe, and the smoke breathed out by the smoker (housemate, carpool, work environment)?: [No](#)

During the last 2 weeks, how many hours of sleep did you get on most days?: [5 To Less Than 7 Hours](#)

During the last 2 weeks, have you felt impaired or unable to adequately perform due to sleepiness or poor quality sleep?: [No](#)

Have you had any unexplained weight loss or gain since your last PHA (or if this is your first PHA, in the PAST 12 MONTHS)?: [No](#)

Sexually transmitted infections or diseases (STIs/STDs) are common. Risk factors for these include, but are not limited to (choose an answer based on your risk):

- A new sex partner in the past 3 months
- More than one sex partner in the last 12 months
- Sexually active women less than 25 years of age
- Inconsistent use of latex condoms (not using latex condoms every time)
- Men who have sex with men
- Sexual contact with person(s) with known STIs/STDs or known risk of STIs/STDs
- Exchanged money or drugs for sex
- Injection drug use

: [I Am Not At Risk](#)

Since your last PHA (or if this is your first PHA, in the PAST 12 MONTHS), what, if anything, have you and your partner used to keep from getting pregnant? Mark all that apply.: [Condoms, Withdrawal Or Pulling Out, Emergency Contraception \(Such As Plan B\)](#)

SECTION VIII

Which of the following best describes your recent pregnancy history?: [I Am Not Pregnant Now, And Was Not Pregnant Or Delivered In The Past 12 Months](#)

Have you had a total hysterectomy (uterus and cervix removed)?: [No](#)

Are you postmenopausal and no longer experiencing menstrual cycles?: [No](#)

Are you currently taking folic acid or a vitamin containing folic acid?: [No](#)

Do you have heavy and/or irregular menstrual cycles/pain or premenstrual syndrome (PMS)?: [No](#)

Do you have recurrent urinary tract infections (more than 3 in the past 12 months)?: [No](#)

Have you had a Pap test (cervical cancer screening) within the PAST 3 YEARS?: [No](#)

Do you have a history of gestational diabetes?: [No](#)

SECTION X

Based on the scale above, rate the amount of pain you have had, on average, over the PAST 24 HOURS.:

What prescriptions or over-the-counter medications are you CURRENTLY taking, NOT INCLUDING vitamins, or nutritional supplements? Include ANY medications or over-the-counter products you are ROUTINELY taking such as Tylenol, Advil, Sudafed, and/or aspirin.: [None](#)

Since your last PHA (or if this is your first PHA, in the PAST 12 MONTHS), have you received care or treatment for any medical and/or mental health condition(s) from a CIVILIAN or NON-MILITARY facility? This includes privately paid elective surgeries.: [No](#)

Are you concerned about any other health condition(s) or health risk exposures not already addressed?: [No](#)

I acknowledge I am responsible to report medical (including mental health) and health issues that may affect my readiness to deploy or fitness to continue serving in an active status in accordance with Department of Defense Instruction 6025.19, Individual Medical Readiness. As a condition of continued participation in military service, I must report significant health information to my chain of command. In addition, I will authorize and facilitate disclosures of all health information by any non-DoD health care provider(s) to the Military Health System (MHS) and/or to my respective Reserve Component: [I Acknowledge](#)

SECTION XI

Are you planning to separate or retire within the next year from Active Duty or Reserve Duty (activated for greater than 30 continuous days) or do you intend to file a claim for disability compensation with the Veterans Benefits Administration?: [No](#)

1. ASSESSMENT, OCCUPATIONAL, SERVICE MEMBER PERIODIC HEALTH ASSESSMENT (PHA) DOCUMENTED ON DD3024

Plan/Comment(s): - Chart Reviewed/Data Evaluated/Patient Seen and PHA questionnaire reviewed. PHA completed in MODS and signed. A copy of the SM's completed PHA was loaded into this encounter at the time of the visit for ease of retrieval and review. SM is instructed to follow-up with their PCM for any acute issues and for further management of any chronic conditions. Patient counseled on healthy lifestyle choices including dietary management, the importance of regular vigorous exercise, attaining adequate sleep, employing safe sex practices, and avoidance of harmful substances such as tobacco and alcohol. Per AR 40-501 Chap 5 SM is deployable. Answered all questions.

Patient will need immunization and glasses. Counseled to follow up with Pap appointment

2. Encounter for other contraceptive management

Plan/Comment(s): - Patient requested birth control. Last menstrual cycle 1 week ago. Pregnancy test pending. Patient counseled to pick up medication tomorrow. Patient verbalized understanding.

Medication(s): - Medication: NORG/EE (ORTHO-TRI-CYCLEN LO EQ) PO TAB; SIG: TAKE ONE TABLET DAILY BY MOUTH IN SEQUENCE IN PACKAGE #3 RF3

Laboratory(ies): - Ordered By: SINNOTT, JONATHAN A; Lab Test: HCG QL; Collection Priority: Routine

3. Other specified counseling

Plan/Comment(s): - 21-year-old active duty service female due for a Pap smear. Patient counseled to make appointment. Patient verbalized understanding.

4. Encounter for screening for depression

Plan/Comment(s): - Negative depression screening. Patient read on immunizations unable to complete until May. Counseled the patient that she is amber on dental. And that she will need glasses. Patient verbalized understanding.

Disposition Last Updated by SINNOTT, JONATHAN A @ 21 Jan 2020 1059 USMST

Disposition: Released w/o Limitations

Follow up: as needed with PCM.

Discussed: Diagnosis, Medication(s)/Treatment(s), Alternatives, Potential Side Effects with Patient who indicated understanding.

Chief complaint

The Chief Complaint is: PHA.

History of present illness

The Patient is a 21 year old female.

<<Note accomplished in TSWF-CORE>>

21 year old female service member in clinic with goal to complete PHA. Denies any pain, will schedule pap, will go to lab, will get hep B by May 2020. She will stop by optometry today to obtain order for 2nd pair glasses and inserts, Sm verbalized understanding.
Pain currently 0/ 10 (no pain).

DoD/VA Pain Rating Scale: Past week pain severity 0/ 10 - No pain.

....

Patient has NOT received other care since their last visit with this clinic.
Patient HAS NOT been in a situation where they were being verbally or physically hurt, threatened, or made to feel afraid.

YES - Patient is able, motivated, and willing to learn about their healthcare.

PHQ-2 Depression Screen Negative. Score:0.

Current medication

Including OTC meds, vitamins, herbals, etc.

none per SM UTD 1/21/20.

Past medical/surgical history
