AUTHORIZATION FOR DISCLOSURE OF MEDICAL OR DENTAL INFORMATION		
PRIVACY ACT STATEMENT		
In accordance with the Privacy Act of 1974 (Public Law 93-579), the notice informs you of the purpose of the form and how it will be used. Please read it carefully.		
AUTHORITY: Public Law 104-191; E.O. 9397 (SSAN); DoD 6025.18-R.		
PRINCIPAL PURPOSE(S): This form is to provide the Military Treatment Facility/Dental Treatment Facility/TRICARE Health Plan with a means to request the use and/or disclosure of an individual's protected health information.		
ROUTINE USE(S): To any third party or the individual upon authorization for the disclosure from the individual for: personal use; insurance; continued medical care; school; legal; retirement/separation; or other reasons.		
DISCLOSURE: Voluntary. Failure to sign the authorization form will result in the non-release of the protected health information.		
This form will not be used for the authorization to disclose alcohol or drug abuse patient information from medical records or for authorization to disclose information from records of an alcohol or drug abuse treatment program. In addition, any use as an authorization to use or disclose psychotherapy notes may not be combined with another authorization except one to use or disclose psychotherapy notes.

AUTHORIZATION FOR DISCLOSURE OF MEDICAL OR DENTAL INFORMATION		
PRIVACY ACT STATEMENT		
In accordance with the Privacy Act of 1974 (Public Law 93-579), the notice informs you of the purpose of the form and how it will be used. Please read it carefully.		
AUTHORITY: Public Law 104-191; E.O. 9397 (SSAN); DoD 6025.18-R.		
PRINCIPAL PURPOSE(S): This form is to provide the Military Treatment Facility/Dental Treatment Facility/TRICARE Health Plan with a means to request the use and/or disclosure of an individual's protected health information.		
ROUTINE USE(S): To any third party or the individual upon authorization for the disclosure from the individual for: personal use; insurance; continued medical care; school; legal; retirement/separation; or other reasons.		
DISCLOSURE: Voluntary. Failure to sign the authorization form will result in the non-release of the protected health information.		
This form will not be used for the authorization to disclose alcohol or drug abuse patient information from medical records or for authorization to disclose information from records of an alcohol or drug abuse treatment program. In addition, any use as an authorization to use or disclose psychotherapy notes may not be combined with another authorization except one to use or disclose psychotherapy notes.		
SECTION I - PATIENT DATA		
1. NAME (Last, First, Middle Initial) <i>Amieva, Yessenia</i>	2. DATE OF BIRTH (YYYYMMDD) <i>19980519</i>	3. SOCIAL SECURITY NUMBER <i>595-75-1668</i>

### OBSTETRICS INTAKE FORM

Please complete the following. Leave items blank that you do not understand and your provider will clarify them for you.  
Name: Yessenia Amieva Partner/Souse: Soshay Sourt Phone: 786-316-5898  
Date: 11-30-22 Email: —

#### Menstrual History:

How old were you when you started menstruating? 14  
When was the first day of your last period? Breast Feeding  
Do you have irregular periods?  yes  no  
If yes, have your periods always been irregular?  yes  no  
Do you bleed between periods?  yes  no

Periods:

Length of menstrual cycle (7-28 days) 24-30 days  
# days you bleed 3-5 days

Days of flow: 3 heavy 1 mod 1 light

#### Health Maintenance:

Last pap smear May 2021 - Neg  
 Flu vaccine Nov-10-2021  
 COVID vaccine Yes

#### Contraception:

What methods have you used to prevent pregnancy?  
 Tubal ligation  Vasectomy  IUD  
 Nexplanon  Depo Provera  Birth control pills  
 Condoms  Other:

#### Pregnancy:

How many times have you been pregnant? 2  
Miscarriages: — Abortions: — Living children: 1  
Vaginally  Cesarean Section —

Are you currently breastfeeding?  yes  no

#### Surgical History:

 (Please list all surgeries and year performed)

Tonsillectomy  Appendectomy  
 Adenolectomy  Gallbladder 9-15-22  
 Myomectomy  Breast  
 Other surgeries: —

Any known reactions to anesthesia? None

#### Medical History:

 Have you ever had?

Cancer  yes  no  
Diabetes/Gestational Diabetes  yes  no  
Blood clots in your legs or lungs  yes  no  
Stroke or Heart attack  yes  no  
High blood pressure  yes  no  
Depression, anxiety, PTSD, bipolar  yes  no  
Abnormal pap.  yes  no  
Sexually transmitted disease  yes  no  
High or low thyroid  yes  no  
Kidney disease  yes  no  
Migraines  yes  no  
Asthma/TB  yes  no  
Blood transfusion  yes  no  
Endometriosis  yes  no  
Fibroids  yes  no  
PCOS  yes  no

hx of Bell's Palsy - 2014

#### \*\*Other Medical History

EPP  
6-1-23

Amieva, Yessenia  
DOB: 05/19/1998 Female / 24  
DOS: 11/30/2022  
DoD ID: 1548801377  
FIN: 45347456

#### Medications/Vitamins/Supplements (list dose):

PNV  
-Fry's Eye

#### Drug Allergies:

 None or List below  
(incl. drug reaction): —

#### Lifestyle:

Do you feel safe at home?  yes  no  
Do you smoke/vape/smokeless tobacco  yes  no  
Do you drink now?  yes  no

Prior to pregnancy?  yes  no  
If you do drink alcohol, how many drinks per week —

Do you use recreational drugs  
(including marijuana)?  yes  no

What is your occupation? Active duty

#### Marital Status:

Single  Married  Man  Woman  
 Separated  Widowed  Domestic Partner  
 Divorced

#### Family History: (parents/siblings)

Please list relationship and age at diagnosis

Breast cancer PGM  
 Ovarian cancer —  
 Colon cancer —  
 Uterine cancer —  
 Bleeding or clotting disorder —  
 High Blood Pressure PGM  
 Pre-eclampsia —  
 Diabetes —  
 Adverse reaction to anesthesia —  
 Other: Heart attacks mom

#### Genetic Screening:

 Include patient, father of baby, or anyone in the family

Muscular Dystrophy  Tay-Sachs  Congenital Heart Defect  
 Down Syndrome  Neural Tube Defects  
 Sickle Cell Disease or Trait  Hemophilia  Thalassemia  
 Cystic Fibrosis  Huntington's Chorea  Multiple births  
 Mental Retardation/Atrophy  Lupus  Metabolic Disorders  
 Autoimmune Disorders  Recurrent pregnancy loss  
 Patient or baby's father with birth defects not listed  
 Other inherited genetic or chromosomal disorders

Please list None for me

#### Review of Systems:

 Do you currently have? None for me

Fever  Chills  Nausea  Vomiting  Cough  
 Shortness of Breath  Chest Pain  Breast pain  
 Breast Discharge  Constipation  Diarrhea  
 Rectal bleeding  Abdominal pain  Joint pain  
 Pain with urinating  Blood in your urine  Frequent urination  
 Urinary Incontinence  Hot flashes

MEDICAL RECORD-SUPPLEMENTAL MEDICAL DATA	
For use of this form, see AR 40-68; the proponent agency is the Office of The Surgeon General.	
REPORT TITLE PATIENT RIGHTS, ADVANCE DIRECTIVES, AND PROTECTED HEALTH INFORMATION	OTSG APPROVED (Date) (YYYYMMDD)

(1) PATIENTS RIGHTS: I have been provided a copy of the pamphlet "Patient's Bill of Rights and Responsibilities". I understand that IACH provides a Patient Representative, and that this Representative is available to ensure my rights as a patient, to review any complaints I may have, and when possible resolve my complaint(s). I understand my rights as a patient to request a Medical Power of Attorney. I have been briefed by the Admissions and Disposition staff on how to request a Medical Power of Attorney.

(2) ADVANCE DIRECTIVES: I have been provided with a copy of the IACH pamphlet "Advance Directives". I understand that even if I have an advance directive I may expect to make decisions in collaboration with my physician regarding my care, including the right to accept or refuse medical or surgical treatment and to be informed of the consequences. I am not required to have an advance directive in order to receive care.

(a) I understand that the terms of an advance directive will be followed by IACH to the extent permitted by law and in accordance with policies and procedures. The staff and physicians of IACH will not be able to follow the terms of my advance directive until I provide a copy to the staff.

(b) I have executed an Advance Directive for Healthcare. YES        NO YA

(c) A copy of my Advance Directive is on file with IACH. YES        NO YA

(d) A copy of my Advance Directive is attached to this form. YES        NO YA

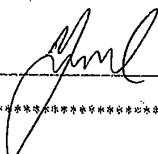

(3) AUTHORIZATION FOR THE USE AND DISCLOSURE OF PROTECTED HEALTH INFORMATION: I have been provided a "Notice of Privacy Practices" pamphlet which explains my rights regarding my PHI. The following instructions affect how IACH will treat the release of my PHI. All instructions will expire 24 hours after I am discharged.

IACH will list all patients in the Inpatient Directory. IACH will disclose your name, and the location at which you are receiving care to anyone that calls and inquiring for you by name. Your religious affiliation may also be released only to members of the clergy. IACH will release a minimum amount of information to authorized public and private entities to assist and coordinate disaster relief efforts and coordinate uses and disclosures to family or other individuals involved in your health care. Additionally, we may use or disclose PHI to notify or assist in notifying a family member, personnel representative, or any other person who is responsible for your care at your location.

(a) YA I permit IACH medical staff to disclose my PHI to persons who inquire about me. I understand that my PHI may be shared between providers and staff IAW Regulations; IACH may discuss my PHI regarding my current admission, treatment, and recovery with member of my family, a close friend or any person I identify.

(b)        I direct that IACH shall NOT disclose my PHI to persons who inquire about me. I understand that my PHI may be shared between providers and staff IAW Regulations; and IACH is required to notify a soldier's commander of a service member's location and condition.

### **Scheduled Procedure**

laparoscopic cholecystectomy

### **History of Present Illness**

Patient woke in the middle of the night last Friday with back pain. Soon the pain radiated to the front of her belly. She felt there was pain across her upper abdomen that seemed to be worse than the back pain. The back pain was still there. The pain was severe. It was associated with nausea. She has not had anything like this before. The pain lasted for about an hour , then it decreased in severity. For the next hour the pain was not as bad but seemed to wax and wane in severity. She presented to the ED where she had an eval that showed gallstones. Since then she has been taking some bentlyl and stayed on a low fat diet. She has not had any further issues. She is breastfeeding.

## **Consultation Notes**

### **Assessment/Plan**

#### 1. Fetal demise from miscarriage

24yo G2P1 at 16+5w gestation by 12week US with subchorionic hematoma diagnosed today with MAB. Formal US showed absent FCA, confirmed by bedside US. VS wnl with no active bleeding on exam. Due to recent heavy bleeding and fetal parts through the cervix, recommend delivery today. Pt is A+ does not require rhogam.

Discussed management options to include induction of labor vs. D&E. Reviewed that with induction she can see fetus, and hold if desired, usually delivered intact. With induction it can be a long process, pain with cramping and contractions can be managed with IV pain meds, there is potential that she may need a D&C for retained placenta which is more common at this gestational age, it may not be successful, and there is risk of infection, heavy bleeding and need for blood transfusion.

Discussed that for a D&E, it is done quickly, they are already in the OR and have better management of bleeding, you can ensure all tissue is out. Risks include damage to surrounding structures, uterine perforation, and likelihood fetus will not be removed intact. Similar to IOL, there is risk of bleeding, infection, need for blood transfusion, though risk is less with D&E.

For either case if significant bleeding were to arise not controlled by any medication available there is potential for hysterectomy to save her life.

After discussion of management options, patient desires to proceed with IOL.

- There is currently no availability on L&D here at IACH, discussed transfer to KU for IOL, patient is agreeable
- accepting provider: Dr. Megan Thomas
- vitals are wnl with mild anemia on CBC, stable for transfer
- will transfer via EMS in case she develops heavy bleeding or starts delivering fetus en route
- all questions and concerns addressed
- awaiting EMS for transfer
- Gabbitas P.A. ED provider aware of plan

Heather Valenzuela, MD  
CPT, MC  
Department of OBGYN  
Irwin Army Community Hospital

### **Subjective**

Ms. Amieva is a 24yo G2P1 at 16+5w gestation presenting to the ED for increased VB today that was bright red. She has had brown discharge more recently, then today had period like bleeding, requiring her to change her pad every 30-60mins due to soaking through pad. She has been having cramping, mild. She denies n/v, fever, chills, cp, sob, dysuria, abnormal discharge or odor.

### **OB CONSIDERATIONS:**

1. COVID positive, will need 3rd trimester growth scan
2. Large Subchorionic hemorrhage on 12w US 50% size of gestational sac (4x4x3cm)
- repeat US 12/1/22 at 14weeks, bleed is smaller in size (25% GS, 3x3x1.7cm)

### **Assessment/Plan**

#### **1. Cholelithiasis**

We discussed the recommendation for a laparoscopic cholecystectomy. We discussed the risks, benefits, and alternatives to surgery. The risks include, but are not limited to: pain, infection, bleeding, damage to adjacent structures, and the need for further surgery. There is a 1 in 200 risk of injury to the bile ducts. There is a 1 in 400 risk of chronic diarrhea as a result of removing the gallbladder. We discussed the possible need for conversion to an open cholecystectomy, and the possible need for an intraoperative cholangiogram (IOC). All of their questions were answered. The patient voiced understanding of the proposed surgery and its inherent risks, and consented to proceed with a laparoscopic cholecystectomy, possible open, possible IOC.

-stop Bentyl as this is contraindicated in breastfeeding

-low fat diet discussed

-HCG for preop

-repeat CBC and CMP today so I can see results preop

Orders:

Basic Metabolic Panel

CBC w/ Diff

### **Subjective**

Patient woke in the middle of the night last Friday with back pain. Soon the pain radiated to the front of her belly. She felt there was pain across her upper abdomen that seemed to be worse than the back pain. The back pain was still there. The pain was severe. It was associated with nausea. She has not had anything like this before. The pain lasted for about an hour , then it decreased in severity. For the next hour the pain was not as bad but seemed to wax and wane in severity. She presented to the ED where she had an eval that showed gallstones. Since then she has been taking some bentyl and stayed on a low fat diet. She has not had any further issues. She is breastfeeding.

### **Medications**

#### **Inpatient**

No active inpatient medications

#### **Home**

Prenatal Multivitamins with Folic Acid 1 mg oral tablet, 1 tab(s), Oral, Daily, 3 refills

Refresh Plus ophthalmic solution, 1 drop(s), Eye-Both, every 2 hr, PRN, 6 refills

### **Imaging Results**

(09/02/2022 07:36 CDT US Abdomen Limited)

#### **\* Final Report \***

### **Reason For Exam**

Abdominal pain, right upper quadrant

### **Report**

REASON FOR STUDY: Abdominal pain, right upper quadrant

Technique: Multiple transabdominal grayscale, color ultrasound images of the abdomen were obtained limited to the right upper quadrant.

Comparisons: None available.

### **Findings:**

The gallbladder wall thickness is 2 mm. 1.8 cm gallstone at the gallbladder fundus. No pericholecystic fluid. Negative sonographic Murphy sign. The common bile duct measures 5.8 mm in diameter at the porta hepatis. No visualized choledocholithiasis. Normal caliber main portal vein with normal hepatopetal flow. The remaining interrogated structures in the right upper quadrant are unremarkable.

SUBJECT: Medical Statement for **Amieva, Yessenia**

Ms. Yessenia Amieva is a patient of the OB/GYN clinic at Irwin Army Community Hospital. Ms. Amieva suffered a miscarriage on 18APR23. At this time, the patient should have been granted 7 days of convalescent leave and a postpartum profile should indicate that Ms. Amieva may return to regular PT after 30 days according to AR 2022-06.

Please contact the OB/GYN at 785-239-7794 for any further questions or concerns.

Very Respectfully,

Rachel Lumb, BSN, RN  
OB/GYN Women's Health Clinic  
Irwin Army Community Hospital

Ms. Amieva has been given this letter to distribute as she desires

Subject: RE: ER f/u

Caller Name: Amieva, Yessenia; Caller Number: H (786) 316-8898, M (786) 316-8898

She was diagnosed with a subchorionic hemorrhage that appeared to be about 50% the size of her gestational sack at 12weeks gestation, had reduced in size during her 14week visit, approximately 24% of gestational sack. Fetus looked well and imaging suggestive of area clotting off and starting to resorb. She presented to the ED twice for evaluation of spotting and brown discharge on 05 and 06 DEC. Plan on 06DEC was to place an MFM consult.

Pt contacted and provided reassurance and previous findings as well as normal FCA on evaluation in ED. Discussed that she will continue to have spotting while the subchorionic hemorrhage is present, and that will be her new "normal." Discussed going to the ED if she is having heavy period-like VB, passing large clots, or if she is having intense cramping pain. We are putting in the referral to MFM today for repeat US and evaluation with plan for growth scan in the 3rd trimester.

I provided encouragement to stay positive and that many patients with this finding carry to term, even though there is a risk for miscarriage and preterm delivery, it is hard to predict that outcome.

Pt was understanding, desires the MFM referral, pt will be contacted for appt. She is to contact us if she does not hear from them within the week.

Patient states that she received voicemail regarding memo, however states that she is still spotting today and is wanting to know if she needs to go back to the ED. Patient states her spotting has remained the same, dark brown in color when she wipes. Denies any abdominal cramping, clots, or passage of tissue. Patient given option to wait and see if things change with bleeding, i.e color change, increase in flow, or abdominal cramping, or if bleeding resolves or may be reevaluated in ED if she is concerned. Patient verbalized an understanding and had no further questions or concerns at this time.

Medications on hand were reviewed and crossed referenced with the medication reconciliation documented on the discharge instructions. The patient's response to the medication and barriers to adherence were assessed. Additional medication administration education was provided as needed (e.g. potential side effects, dose, route, frequency and indication etc.).

### **8. Patient/Caregiver**

Verbalized understanding of proper medications available.

### **9. Can you please tell me about your upcoming follow-up appointments to include any laboratory or radiology appointments?**

Confirmed and reviewed specialist provider follow up appointment with: SM has appt for OB but will call the appt line to change the appt due to quarantine.

### **10. Were there any discharge home services scheduled or durable medical equipment ordered?**

No: Discharge home services were not scheduled and / or durable medical equipment was not ordered.

### **Have I answered all of your questions or concerns today?**

Yes

Caregiver/Patient instructed to call 911 if they are experiencing a life threatening emergency such as chest pain or trouble breathing.

No other questions , comments, or concerns.

### **Addendum by SEAL-RESCH, KELLY L, LPN on November 21, 2022 09:15:23 CST**

SM called back and states that her spotting has stopped and she is waiting for OB to reach out for an appt. Currently breastfeeding her 11 month old but is not sure she is getting enough milk and asked about adding Whole milk to diet, it's fine but only whole milk being that the baby still needs the fat in the milk. States she will keep her phone with her as to not miss call from OB.

The following sheet(s) are the Patient Education Leaflets for Amieva, Yessenia

Gastroenterology

## **Minimally Invasive Cholecystectomy, Care After**

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

### **What can I expect after the procedure?**

After the procedure, it is common to have:

- Pain at your incision sites. You will be given medicines to control this pain.
- Mild nausea or vomiting.
- Bloating and possible shoulder pain from the gas that was used during the procedure.

### **Follow these instructions at home:**

#### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed an antibiotic medicine, take or use it as told by your health care provider. **Do not** stop using the antibiotic even if you start to feel better.
- Ask your health care provider if the medicine prescribed to you:
  - Requires you to avoid driving or using machinery.
  - Can cause constipation. You may need to take these actions to prevent or treat constipation:
    - Drink enough fluid to keep your urine pale yellow.
    - Take over-the-counter or prescription medicines.
    - Eat foods that are high in fiber, such as beans, whole grains, and fresh fruits and vegetables.
    - Limit foods that are high in fat and processed sugars, such as fried or sweet foods.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Discharge Documentation***

### **Incision care**

- Follow instructions from your health care provider about how to take care of your incisions. Make sure you:
  - Wash your hands with soap and water for at least 20 seconds before and after you change your bandage (dressing). If soap and water are not available, use hand sanitizer.
  - Change your dressing as told by your health care provider.
  - Leave stitches (sutures), skin glue, or adhesive strips in place. These skin closures may need to be in place for 2 weeks or longer. If adhesive strip edges start to loosen and curl up, you may trim the loose edges. **Do not** remove adhesive strips completely unless your health care provider tells you to do that.
- **Do not** take baths, swim, or use a hot tub until your health care provider approves. Ask your health care provider if you may take showers. You may only be allowed to take sponge baths.
- Check your incision area every day for signs of infection. Check for:
  - More redness, swelling, or pain.
  - Fluid or blood.
  - Warmth.
  - Pus or a bad smell.

### **Activity**

- Rest as told by your health care provider.
- Avoid sitting for a long time without moving. Get up to take short walks every 1–2 hours. This is important to improve blood flow and breathing. Ask for help if you feel weak or unsteady.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- **Do not** play contact sports until your health care provider approves.
- **Do not** return to work or school until your health care provider approves.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.

### **General instructions**

- If you were given a sedative during the procedure, it can affect you for several hours. **Do not** drive or operate machinery until your health care provider says that it is safe.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Discharge Documentation***

- Keep all follow-up visits as told by your health care provider. This is important.

#### **Contact a health care provider if:**

- You develop a rash.
- You have more redness, swelling, or pain around your incisions.
- You have fluid or blood coming from your incisions.
- Your incisions feel warm to the touch.
- You have pus or a bad smell coming from your incisions.
- You have a fever.
- One or more of your incisions breaks open.

#### **Get help right away if:**

- You have trouble breathing.
- You have chest pain.
- You have increasing pain in your shoulders.
- You faint or feel dizzy when you stand.
- You have severe pain in your abdomen.
- You have nausea or vomiting that lasts for more than one day.
- You have leg pain.

#### **Summary**

- After your procedure, it is common to have pain at the incision sites. You may also have nausea or bloating.
- Follow your health care provider's instructions about medicine, activity restrictions, and caring for your incision areas. **Do not** do activities that require a lot of effort.
- Contact a health care provider if you have a fever or other signs of infection, such as more redness, swelling, or pain around the incisions.
- Get help right away if you have chest pain, increasing pain in the shoulders, or trouble breathing.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Pharmacology

## **General Anesthesia, Adult, Care After**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Discharge Documentation***

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

### **What can I expect after the procedure?**

After the procedure, the following side effects are common:

- Pain or discomfort at the IV site.
- Nausea.
- Vomiting.
- Sore throat.
- Trouble concentrating.
- Feeling cold or chills.
- Feeling weak or tired.
- Sleepiness and fatigue.
- Soreness and body aches. These side effects can affect parts of the body that were not involved in surgery.

### **Follow these instructions at home:**

**For the time period you were told by your health care provider:**

- Rest.
- **Do not** participate in activities where you could fall or become injured.
- **Do not** drive or use machinery.
- **Do not** drink alcohol.
- **Do not** take sleeping pills or medicines that cause drowsiness.
- **Do not** make important decisions or sign legal documents.
- **Do not** take care of children on your own.

### **Eating and drinking**

- Follow any instructions from your health care provider about eating or drinking restrictions.
- When you feel hungry, start by eating small amounts of foods that are soft and easy to digest (bland), such as toast. Gradually return to your regular diet.
- Drink enough fluid to keep your urine pale yellow.
- If you vomit, rehydrate by drinking water, juice, or clear broth.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

### ***Discharge Documentation***

#### **General instructions**

- If you have sleep apnea, surgery and certain medicines can increase your risk for breathing problems. Follow instructions from your health care provider about wearing your sleep device:
  - Anytime you are sleeping, including during daytime naps.
  - While taking prescription pain medicines, sleeping medicines, or medicines that make you drowsy.
- Have a responsible adult stay with you for the time you are told. It is important to have someone help care for you until you are awake and alert.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you smoke, **do not** smoke without supervision.
- Keep all follow-up visits as told by your health care provider. This is important.

#### **Contact a health care provider if:**

- You have nausea or vomiting that does not get better with medicine.
- You cannot eat or drink without vomiting.
- You have pain that does not get better with medicine.
- You are unable to pass urine.
- You develop a skin rash.
- You have a fever.
- You have redness around your IV site that gets worse.

#### **Get help right away if:**

- You have difficulty breathing.
- You have chest pain.
- You have blood in your urine or stool, or you vomit blood.

#### **Summary**

- After the procedure, it is common to have a sore throat or nausea. It is also common to feel tired.
- Have a responsible adult stay with you for the time you are told. It is important to have someone help care for you until you are awake and alert.
- When you feel hungry, start by eating small amounts of foods that are soft and easy to digest (bland), such as toast. Gradually return to your regular diet.
- Drink enough fluid to keep your urine pale yellow.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.

### **Hospital Course**

The patient was admitted in spontaneous labor and augmented with amniotomy. She progressed to complete dilation and effected the NSVD of a viable female neonate. A vaginal laceration was noted and repaired. The patient has had an uncomplicated postpartum course. She has remained afebrile throughout her hospital stay. She is ambulating well, tolerating a regular diet, urinating without difficulty, reports normal bowel activities and has no breast or leg pain. Lochia flow is diminishing.

## **General Anesthesia, Adult, Care After**

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

### **What can I expect after the procedure?**

After the procedure, the following side effects are common:

- Pain or discomfort at the IV site.
- Nausea.
- Vomiting.
- Sore throat.
- Trouble concentrating.
- Feeling cold or chills.
- Feeling weak or tired.
- Sleepiness and fatigue.
- Soreness and body aches. These side effects can affect parts of the body that were not involved in surgery.

### **Follow these instructions at home:**

**For the next 24 hours:**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Discharge Documentation***

- Rest.
- **Do not** participate in activities where you could fall or become injured.
- **Do not** drive or use machinery.
- **Do not** drink alcohol.
- **Do not** take sleeping pills or medicines that cause drowsiness.
- **Do not** make important decisions or sign legal documents.
- **Do not** take care of children on your own.

### **Eating and drinking**

- Follow any instructions from your health care provider about eating or drinking restrictions.
- When you feel hungry, start by eating small amounts of foods that are soft and easy to digest (bland), such as toast. Gradually return to your regular diet.
- Drink enough fluid to keep your urine pale yellow.
- If you vomit, rehydrate by drinking water, juice, or clear broth.

### **General instructions**

- If you have sleep apnea, surgery and certain medicines can increase your risk for breathing problems. Follow instructions from your health care provider about wearing your sleep device:
  - Anytime you are sleeping, including during daytime naps.
  - While taking prescription pain medicines, sleeping medicines, or medicines that make you drowsy.
- Have a responsible adult stay with you for the next 24 hours. It is important to have someone help care for you until you are awake and alert.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you smoke, **do not** smoke without supervision.
- Keep all follow-up visits as told by your health care provider. This is important.

### **Contact a health care provider if:**

- You have nausea or vomiting that does not get better with medicine.
- You cannot eat or drink without vomiting.
- You have pain that does not get better with medicine.
- You are unable to pass urine.
- You develop a skin rash.
- You have a fever.
- You have redness around your IV site that gets worse.

### **Get help right away if:**

- You have difficulty breathing.
- You have chest pain.
- You have blood in your urine or stool, or you vomit blood.

### **Summary**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

## **Minimally Invasive Cholecystectomy, Care After**

This sheet gives you information about how to care for yourself after your procedure. Your health care provider may also give you more specific instructions. If you have problems or questions, contact your health care provider.

### **What can I expect after the procedure?**

After the procedure, it is common to have:

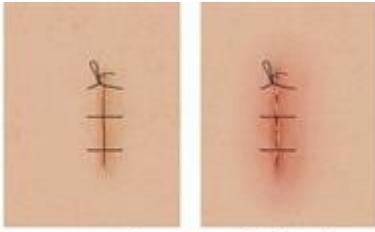

- Pain at your incision sites. You will be given medicines to control this pain.
- Mild nausea or vomiting.
- Bloating and possible shoulder pain from the gas that was used during the procedure.

### **Follow these instructions at home:**

#### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed an antibiotic medicine, take or use it as told by your health care provider. **Do not** stop using the antibiotic even if you start to feel better.
- Ask your health care provider if the medicine prescribed to you:
  - Requires you to avoid driving or using machinery.
  - Can cause constipation. You may need to take these actions to prevent or treat constipation:
    - Drink enough fluid to keep your urine pale yellow.
    - Take over-the-counter or prescription medicines.
    - Eat foods that are high in fiber, such as beans, whole grains, and fresh fruits and vegetables.
    - Limit foods that are high in fat and processed sugars, such as fried or sweet foods.

#### **Incision care**

Normal  
incision

Infected  
incision

- Follow instructions from your health care provider about how to take care of your incisions. Make sure you:

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Discharge Documentation***

- Wash your hands with soap and water for at least 20 seconds before and after you change your bandage (dressing). If soap and water are not available, use hand sanitizer.
- Change your dressing as told by your health care provider.
- Leave stitches (sutures), skin glue, or adhesive strips in place. These skin closures may need to be in place for 2 weeks or longer. If adhesive strip edges start to loosen and curl up, you may trim the loose edges. **Do not** remove adhesive strips completely unless your health care provider tells you to do that.
- **Do not** take baths, swim, or use a hot tub until your health care provider approves. Ask your health care provider if you may take showers. You may only be allowed to take sponge baths.
- Check your incision area every day for signs of infection. Check for:
  - More redness, swelling, or pain.
  - Fluid or blood.
  - Warmth.
  - Pus or a bad smell.

### **Activity**

- Rest as told by your health care provider.
- Avoid sitting for a long time without moving. Get up to take short walks every 1–2 hours. This is important to improve blood flow and breathing. Ask for help if you feel weak or unsteady.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- **Do not** play contact sports until your health care provider approves.
- **Do not** return to work or school until your health care provider approves.
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.

### **General instructions**

- If you were given a sedative during the procedure, it can affect you for several hours. **Do not** drive or operate machinery until your health care provider says that it is safe.
- Keep all follow-up visits as told by your health care provider. This is important.

### **Contact a health care provider if:**

- You develop a rash.
- You have more redness, swelling, or pain around your incisions.
- You have fluid or blood coming from your incisions.
- Your incisions feel warm to the touch.
- You have pus or a bad smell coming from your incisions.
- You have a fever.
- One or more of your incisions breaks open.

### **Get help right away if:**

- You have trouble breathing.
- You have chest pain.
- You have increasing pain in your shoulders.
- You faint or feel dizzy when you stand.
- You have severe pain in your abdomen.
- You have nausea or vomiting that lasts for more than one day.
- You have leg pain.

### **Summary**

- After your procedure, it is common to have pain at the incision sites. You may also have nausea or bloating.

Patient Name: **Amieva, Yessenia**

## **Common Emergency Awareness Tips**

**IS IT A STROKE?** Act **FAST** and Check for these signs:

**FACE** Does the face look uneven?

**ARM** Does one arm drift down?

**SPEECH** Does their speech sound strange?

**TIME** Call 9-1-1 at any sign of stroke

## **Heart Attack Signs**

**Chest discomfort:** Most heart attacks involve discomfort in the center of the chest and lasts more than a few minutes, or goes away and comes back. It can feel like uncomfortable pressure, squeezing, fullness or pain.

**Discomfort in upper body:** Symptoms can include pain or discomfort in one or both arms, back, neck, jaw or stomach.

**Shortness of breath:** With or without discomfort.

**Other signs:** Breaking out in a cold sweat, nausea, or lightheaded.

Remember, **MINUTES DO MATTER**. If you experience any of these heart attack warning signs, call **9-1-1** to get immediate medical attention!

### **Breastfeeding and Cracked or Sore Nipples**

Breastfeeding can be challenging, especially during the first few weeks after childbirth. It is normal to have some tenderness in your nipples when you start to breastfeed your new baby, even if you have breastfed before.

Cracked or sore nipples are often caused by a poor latch, which refers to the way your baby's mouth attaches to your nipple to breastfeed. Soreness can also happen if your baby is not positioned properly at your breast.

### **How does this affect me?**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Discharge Documentation***

Cracked or sore nipples can be painful. If breastfeeding is too painful or your baby has a poor latch, you may have problems completely emptying your breasts during a feeding. This may lead to problems such as overfilling of your breasts with milk (engorgement), infection, or a decrease in milk supply.

### **How does this affect my baby?**

If a poor latch is the cause of cracked or sore nipples, your baby may also have problems getting enough breast milk during a feeding.

### **Follow these instructions at home:**

#### **Breastfeeding strategy**

- Make sure your baby is latched on to your breast and positioned correctly.
- Try different breastfeeding positions to find one that works the best.
- Start breastfeeding by having your baby feed from the less sore breast first.
- Make sure you break your baby's latch before removing him or her from the breast. To do this:
  - Insert your little finger between your nipple and your baby's gums.

#### **If you use a breast pump:**

- Make sure the flange fits properly over your nipple. A poor-fitting flange can cause nipple damage.
- Start by setting the pump to a low setting, and gradually increase the pump strength as needed. Too high of a setting may cause damage to your nipple.

#### **Breast care**

Ensure that your breasts stay moisturized and healthy by:

- Avoiding the use of soap on your nipples.
- Wearing a supportive bra. Avoid wearing underwire-style bras or tight bras.
- Air drying your nipples for 3–4 minutes after each feeding.
- Using only cotton bra pads to absorb any breast milk that leaks. Be sure to change the pads if they become soaked with milk.
- Using lanolin on your nipples after nursing. If you use pure lanolin, you do not need to wash it off before feeding your baby again. Pure lanolin is not poisonous (toxic) to your baby.
- Massaging some breast milk into your nipples:
  - Use your hand to squeeze out a few drops of breast milk (hand express).
  - Gently massage the milk into your nipple.
  - Let your nipple air-dry.

### **Contact a health care provider if:**

- You have nipple pain.
- You have soreness or cracking that lasts more than 1 week.

### **Summary**

- It is normal to have some tenderness in your nipples when you start to breastfeed your new baby. However, you should contact your health care provider if you have nipple pain.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Discharge Documentation***

- Cracked or sore nipples are most often caused by a poor latch or improper positioning.
- To help with cracked or sore nipples, make sure your baby is latched on to your breast and positioned correctly, and keep your nipples healthy and moisturized. Use lanolin or expressed milk on your nipples. Avoid washing your nipples with soap.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Document Released: 07/25/2018 Document Revised: 07/25/2018 Document Reviewed: 07/25/2018 Elsevier Interactive Patient Education © 2019 Elsevier Inc.

## **Home Care Instructions for Mom**

After discharge, you may discover that you still have questions about body changes, activity, and care during the next few weeks. The following information should be helpful in answering many of your questions.

### **ACTIVITY**

- Gradually resume your daily activities at home.
- Allow time for rest periods during the day and nap while your newborn sleeps.
- Avoid heavy lifting (more than 20 lb) and strenuous work or sports for the next 2 weeks. Slow to moderate walking is usually safe. Increase your activity as your body tolerates.

### **VAGINAL FLOW AND RETURN OF YOUR MENSTRUAL PERIOD**

- Vaginal flow may continue for 4 to 6 weeks after delivery.
- Usually the amount decreases and the color of blood gets lighter.
- Bright red blood and an increased flow may reoccur if you have been too active.
- Call your caregiver if you are soaking more than 1 pad an hour or passing large golfball sized clots.
- Menstrual periods will usually return 6 to 8 weeks after delivery.
- If you are breastfeeding, your period will return anywhere from 8 weeks to the time you stop breastfeeding.

### **PERINEAL CARE**

- Use the peri bottle and change pads each time you go to the bathroom.
- Use towelettes in place of toilet paper until stitches are healed.
- Take warm tub baths for 15 to 20 minutes.
- Continue to use medicated pads or pain relieving spray.
- **Do not** use tampons or douches, or have vaginal/anal sex until after your postpartum visit in the clinic.
- Wipe from front to back.

### **BOWELS AND HEMORRHOIDS**

- Drink at least 6 to 8 glasses of non-caffeinated fluids per day.
- Eat fiber-rich diet with whole grains, raw fruits, and vegetables.
- Take frequent warm tub baths if hemorrhoids are a problem.
- Avoid straining when having a bowel movement.
- Over-the-counter medicines and stool softeners can be used as directed by your caregiver.

### **NUTRITION**

- Eat a well-balanced diet that includes the basic food groups.
- **Do not** try to lose weight quickly by cutting back on calories.
- If you are breastfeeding, drink at least 8 to 10 glasses of non-caffeinated fluid per day and increase your intake by 600 calories a day.
- Take your prenatal vitamins until your postpartum checkup or until your caregiver tells you to stop.

### **BREASTFEEDING**

If you are **not** breastfeeding:

- Wear a good tight-fitting bra.
- Limit fluid intake after 1 or 2 days after delivery, or as directed, if your breasts are becoming engorged.
- Avoid nipple stimulation and apply cool (not icy cold) compresses to the breasts for comfort as needed.
- Avoid drinking alcohol and caffeinated drinks.
- Mild over-the-counter pain medication recommended by your caregiver is helpful for breast discomfort.
- Medications to dry up breast milk are not recommended.

If you are breastfeeding:

- Encourage your newborn to breastfeed if you think he or she is hungry.
- Wash your hands before breastfeeding.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Discharge Documentation***

- Clean your breasts with warm water before nursing.
- Start to encourage feeding 8 to 12 times a day for 10 to 15 minutes on each breast in the beginning to help stimulate milk production and train your newborn.
- Avoid water and formula supplements for your newborn unless otherwise directed.
- Have your newborn seen by his or her caregiver 3 to 5 days after delivery and again at 2 to 3 weeks to evaluate his or her progress with breastfeeding.
- Call your newborn's caregiver if you think he or she is not gaining weight or may be losing weight.

### **POSTPARTUM BLUES**

Following delivery, your body goes through a drastic change in hormone levels. You may find yourself crying for no apparent reason and unable to cope with all the changes a newborn brings. Get support from your partner and friends. Give yourself time to adjust. If these feelings persist after several weeks, contact your caregiver or other professionals that can help you.

Call your local emergency department, go to the emergency room, or get help right away from a relative, friend, or neighbor if you feel you are about to harm yourself, your newborn, or anyone else.

### **EXERCISES**

Start Kegel exercises right after delivery. You can do it while standing, sitting, or lying down. Tighten your stomach muscles and the muscles surrounding your birth canal. Hold for a few seconds and then relax. Repeat 5 times each time. Make Kegel exercises a part of your daily routine to maintain the muscle tone that supports your vagina, bladder, and bowels.

### **INTIMACY AND SEXUALITY**

New parents need time to adjust to each other intimately and sexually after giving birth. Try to spend time as a couple discussing ways to adjust to your infant, your new schedule, and how to meet both your desires and needs. Counseling can be helpful in deeply troubled cases.

If you are breastfeeding or not yet having a menstrual period, you can get pregnant. Use some form of birth control to prevent getting pregnant. Talk to your caregiver about the birth control choices that are available to you for your situation.

### **SEEK IMMEDIATE MEDICAL CARE IF:**

- Drainage increases from the episiotomy or tear site, or the drainage starts to smell bad.
- You soak pads with blood in 1 hour or less.
- You have severe lower abdominal pain or cramping.
- You have a bad smelling vaginal discharge.
- You have increased rather than decreased pain around stitches or swelling, redness, or hardness in area.
- You have an oral temperature above 100.4° F (38.0° C), not controlled by medicine.
- You have pain or redness in the calf of the leg.
- You feel sick to your stomach (**nausea**) and throw up (**vomit**) for 12 hours.
- You have sudden, severe chest pain.
- You have shortness of breath.
- You have painful or bloody urination.
- You have visual problems.
- You develop a severe headache.
- An area of your breast is red and sore, and you have a fever. You may feel like you have flu symptoms.

### ***Discharge Documentation***

**T**houghts of hurting yourself or your baby

**Call your OB health care Provider if you have:**

(On off hours, weekends, and holiday's go to your nearest ER)

**B**leeding, soaking through one pad/hour, or blood clots, the size of an egg or bigger

**I**ncision that is not healing

**R**ed or swollen leg, that is painful or warm to touch

**T**emperature of 100.4o F or greater

**H**eadache that does not get better, even after taking medicine, or headache with vision changes

**Trust your instincts, ALWAYS get medical care if you are not feeling well or have questions or concerns.**

**These POST-BIRTH warning signs can become life-threatening if you don't receive medical care right away because:**

- Pain in chest, obstructed breathing or shortness of breath (trouble catching your breath) may mean you have a blood clot in your lung or a heart problem
- Seizures may mean you have a condition called eclampsia
- Thoughts or feelings of wanting to hurt yourself or your baby may mean you have postpartum depression
- Bleeding (heavy), soaking more than one pad in an hour or passing an egg-sized clot or bigger may mean you have an obstetric hemorrhage
- Incision that is not healing, increased redness or any pus from episiotomy or C-section site may mean you have an infection
- Redness, swelling, warmth, or pain in the calf area of your leg may mean you have a blood clot
- Temperature of 100.4°F or higher, bad smelling vaginal blood or discharge may mean you have an infection
- Headache (very painful), vision changes, or pain in the upper right area of your belly may mean you have high blood pressure or post birth preeclampsia

Filed: 12/22/22 0741	Creation Time: 12/22/22 0738	Status: Signed
Editor: Martinelli, Emily J. D., MD (Resident)		Cosigner: Linscheid, Caitlin R, MD at 12/22/22 1409

#### Discharge Summary

**Name:** Yessenia Amieva  
**Medical Record Number:** 2279841      **Account Number:** 537732378  
**Date Of Birth:** 5/19/1998      **Age:** 24 y.o.  
**Admit date:** 12/20/2022      **Discharge date:** 12/21/2022

**Discharge Attending:** Linscheid

**Discharge Summary Completed By:** Emily J. D. Martinelli, MD

**Service:** Obstetrics

**Reason for hospitalization:**

Pregnancy [Z34.90]

Fetal demise before 20 weeks with retention of dead fetus [O02.1]

**Primary Discharge Diagnosis:**

Same as Above

**Hospital Diagnoses:**

Hospital Problems

Active Problems

\* (Principal) Fetal demise before 20 weeks with retention of dead fetus

#### Significant Past Medical History

History of Bell's palsy

#### Allergies

Patient has no known allergies.

#### Brief Hospital Course

The patient was admitted and the following issues were addressed during this hospitalization: (with pertinent details including admission exam/imaging/labs).

Pt was transferred to KUMC from IACH due to 16 week intrauterine fetal demise. She had induction with mifepristone/misoprostol and then misoprostol. She delivered a non-viable male infant spontaneously and the placenta followed shortly after.

And ANORA was sent for genetic testing, and APAS labs were also sent.

She will follow up with her home OB provider. Discharged on postpartum day #0

#### Items Needing Follow Up

Pending items or areas that need to be addressed at follow up: NA

Release to patient Immediate

##### Regular Diet

You have no dietary restriction. Please continue with a healthy, balanced diet.

##### Activity as Tolerated

It is important to keep increasing your activity level after you leave the hospital. Moving around can help prevent blood clots, lung infection (pneumonia) and other problems. Gradually increasing the number of times you are up moving around will help you return to your normal activity level more quickly. Continue to increase the number of times you are up to the chair and walking daily to return to your normal activity level. Begin to work toward your normal activity level at discharge.

##### Report These Signs and Symptoms

Please contact your doctor if you have any of the following symptoms: temperature higher than 100 degrees F, uncontrolled pain, persistent nausea and/or vomiting, difficulty breathing, chest pain, severe abdominal pain, headache, unable to urinate, unable to have bowel movement, drainage with a foul odor or vaginal bleeding soaking more than 1 pad an hour for 2 or more hours.

### **Hospital Course**

The patient was admitted in spontaneous labor and augmented with amniotomy. She progressed to complete dilation and effected the NSVD of a viable female neonate. A vaginal laceration was noted and repaired. The patient has had an uncomplicated postpartum course. She has remained afebrile throughout her hospital stay. She is ambulating well, tolerating a regular diet, urinating without difficulty, reports normal bowel activities and has no breast or leg pain. Lochia flow is diminishing.

Procedures

SVD

Repair of laceration

Episiotomy

Amniotomy

### **Significant Findings**

None

### **Rhogam**

Not indicated

### **Physical Exam**

#### **Most Recent Vitals & Measurements**

**T:** 36.7 °C (Oral) **TMIN:** 36.6 °C (Oral) **TMAX:** 37.0 °C (Oral) **HR:** 88(Monitored) **RR:** 16 **BP:** 131/72

General: NAD

Cardio: regular rate, adequate perfusion, no excessive pedal edema

Respiratory: nonlabored breathing, equal rise and fall of the chest

Abdominal: soft, no fundal tenderness, no rebound or guarding. Fundus Firm at U-2

Skin: intact, warm

LE's: no pitting edema present

### **Discharge Plan**

Fetal heart baseline rate range 160 to 180

Gestation period, 40 weeks

Normal pregnancy in primigravida

Obstetric high vaginal laceration

Single live birth

Spontaneous vaginal delivery

Discharge home in stable condition with infant

Return precautions:

-Vaginal bleeding with saturation of pads, >1/hr for >2 hours

-Fever >100.4

-Foul smelling vaginal discharge with fever or with abdominal pain

-Breast redness and tenderness

-Thoughts of harming yourself or your baby

Post op instructions

- May shower with soap and water but avoid oils and lotions

- Diet as tolerated

Patient Name: **Amieva, Yessenia**

### **WH Patient Education Note**

Patient Education Materials Follows:

## **Home Care Instructions for Mom**

After discharge, you may discover that you still have questions about body changes, activity, and care during the next few weeks. The following information should be helpful in answering many of your questions.

### **ACTIVITY**

- Gradually resume your daily activities at home.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Discharge Documentation***

- Allow time for rest periods during the day and nap while your newborn sleeps.
- Avoid heavy lifting (more than 20 lb) and strenuous work or sports for the next 2 weeks. Slow to moderate walking is usually safe. Increase your activity as your body tolerates.

### **VAGINAL FLOW AND RETURN OF YOUR MENSTRUAL PERIOD**

- Vaginal flow may continue for 4 to 6 weeks after delivery.
- Usually the amount decreases and the color of blood gets lighter.
- Bright red blood and an increased flow may reoccur if you have been too active.
- Call your caregiver if you are soaking more than 1 pad an hour or passing large golfball sized clots.
- Menstrual periods will usually return 6 to 8 weeks after delivery.
- If you are breastfeeding, your period will return anywhere from 8 weeks to the time you stop breastfeeding.

### **PERINEAL CARE**

- Use the peri bottle and change pads each time you go to the bathroom.
- Use towelettes in place of toilet paper until stitches are healed.
- Take warm tub baths for 15 to 20 minutes.
- Continue to use medicated pads or pain relieving spray.
- **Do not** use tampons or douches, or have vaginal/anal sex until after your postpartum visit in the clinic.
- Wipe from front to back.

### **BOWELS AND HEMORRHOIDS**

- Drink at least 6 to 8 glasses of non-caffeinated fluids per day.
- Eat fiber-rich diet with whole grains, raw fruits, and vegetables.
- Take frequent warm tub baths if hemorrhoids are a problem.
- Avoid straining when having a bowel movement.
- Over-the-counter medicines and stool softeners can be used as directed by your caregiver.

### **NUTRITION**

- Eat a well-balanced diet that includes the basic food groups.
- **Do not** try to lose weight quickly by cutting back on calories.
- If you are breastfeeding, drink at least 8 to 10 glasses of non-caffeinated fluid per day and increase your intake by 600 calories a day.
- Take your prenatal vitamins until your postpartum checkup or until your caregiver tells you to stop.

### **BREASTFEEDING**

If you are **not** breastfeeding:

- Wear a good tight-fitting bra.
- Limit fluid intake after 1 or 2 days after delivery, or as directed, if your breasts are becoming engorged.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Discharge Documentation***

- Avoid nipple stimulation and apply cool (not icy cold) compresses to the breasts for comfort as needed.
  - Avoid drinking alcohol and caffeinated drinks.
- Mild over-the-counter pain medication recommended by your caregiver is helpful for breast discomfort.
- Medications to dry up breast milk are not recommended.

If you are breastfeeding:

- Encourage your newborn to breastfeed if you think he or she is hungry.
- Wash your hands before breastfeeding.
- Clean your breasts with warm water before nursing.
- Start to encourage feeding 8 to 12 times a day for 10 to 15 minutes on each breast in the beginning to help stimulate milk production and train your newborn.
- Avoid water and formula supplements for your newborn unless otherwise directed.
- Have your newborn seen by his or her caregiver 3 to 5 days after delivery and again at 2 to 3 weeks to evaluate his or her progress with breastfeeding.
- Call your newborn's caregiver if you think he or she is not gaining weight or may be losing weight.

### **POSTPARTUM BLUES**

Following delivery, your body goes through a drastic change in hormone levels. You may find yourself crying for no apparent reason and unable to cope with all the changes a newborn brings. Get support from your partner and friends. Give yourself time to adjust. If these feelings persist after several weeks, contact your caregiver or other professionals that can help you.

Call your local emergency department, go to the emergency room, or get help right away from a relative, friend, or neighbor if you feel you are about to harm yourself, your newborn, or anyone else.

### **EXERCISES**

Start Kegel exercises right after delivery. You can do it while standing, sitting, or lying down. Tighten your stomach muscles and the muscles surrounding your birth canal. Hold for a few seconds and then relax. Repeat 5 times each time. Make Kegel exercises a part of your daily routine to maintain the muscle tone that supports your vagina, bladder, and bowels.

### **INTIMACY AND SEXUALITY**

New parents need time to adjust to each other intimately and sexually after giving birth. Try to spend time as a couple discussing ways to adjust to your infant, your new schedule, and how to meet both your desires and needs. Counseling can be helpful in deeply troubled cases.

If you are breastfeeding or not yet having a menstrual period, you can get pregnant. Use some form of birth control to prevent getting pregnant. Talk to your caregiver about the birth control choices that are available to you for your situation.

### **SEEK IMMEDIATE MEDICAL CARE IF:**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Discharge Documentation***

- Drainage increases from the episiotomy or tear site, or the drainage starts to smell bad.
- You soak pads with blood in 1 hour or less.
- You have severe lower abdominal pain or cramping.
- You have a bad smelling vaginal discharge.
- You have increased rather than decreased pain around stitches or swelling, redness, or hardness in area.
- You have an oral temperature above 100.4° F (38.0° C), not controlled by medicine.
- You have pain or redness in the calf of the leg.
- You feel sick to your stomach (*nausea*) and throw up (*vomit*) for 12 hours.
- You have sudden, severe chest pain.
- You have shortness of breath.
- You have painful or bloody urination.
- You have visual problems.
- You develop a severe headache.
- An area of your breast is red and sore, and you have a fever. You may feel like you have flu symptoms.

### ***Discharge Documentation***

- Pain in chest, obstructed breathing or shortness of breath (trouble catching your breath) may mean you have a blood clot in your lung or a heart problem
- Seizures may mean you have a condition called eclampsia
- Thoughts or feelings of wanting to hurt yourself or your baby may mean you have postpartum depression
- Bleeding (heavy), soaking more than one pad in an hour or passing an egg-sized clot or bigger may mean you have an obstetric hemorrhage
- Incision that is not healing, increased redness or any pus from episiotomy or C-section site may mean you have an infection
- Redness, swelling, warmth, or pain in the calf area of your leg may mean you have a blood clot
- Temperature of 100.4°F or higher, bad smelling vaginal blood or discharge may mean you have an infection
- Headache (very painful), vision changes, or pain in the upper right area of your belly may mean you have high blood pressure or post birth preeclampsia

## **Breastfeeding and Cracked or Sore Nipples**

Breastfeeding can be challenging, especially during the first few weeks after childbirth. It is normal to have some tenderness in your nipples when you start to breastfeed your new baby, even if you have breastfed before.

Cracked or sore nipples are often caused by a poor latch, which refers to the way your baby's mouth attaches to your nipple to breastfeed. Soreness can also happen if your baby is not positioned properly at your breast.

### **How does this affect me?**

Cracked or sore nipples can be painful. If breastfeeding is too painful or your baby has a poor latch, you may have problems completely emptying your breasts during a feeding. This may lead to problems such as overfilling of your breasts with milk (engorgement), infection, or a decrease in milk supply.

### **How does this affect my baby?**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Discharge Documentation***

If a poor latch is the cause of cracked or sore nipples, your baby may also have problems getting enough breast milk during a feeding.

#### **Follow these instructions at home:**

##### **Breastfeeding strategy**

- Make sure your baby is latched on to your breast and positioned correctly.
- Try different breastfeeding positions to find one that works the best.
- Start breastfeeding by having your baby feed from the less sore breast first.
- Make sure you break your baby's latch before removing him or her from the breast. To do this:
  - Insert your little finger between your nipple and your baby's gums.

##### **If you use a breast pump:**

- Make sure the flange fits properly over your nipple. A poor-fitting flange can cause nipple damage.
- Start by setting the pump to a low setting, and gradually increase the pump strength as needed. Too high of a setting may cause damage to your nipple.

##### **Breast care**

Ensure that your breasts stay moisturized and healthy by:

- Avoiding the use of soap on your nipples.
- Wearing a supportive bra. Avoid wearing underwire-style bras or tight bras.
- Air drying your nipples for 3–4 minutes after each feeding.
- Using only cotton bra pads to absorb any breast milk that leaks. Be sure to change the pads if they become soaked with milk.
- Using lanolin on your nipples after nursing. If you use pure lanolin, you do not need to wash it off before feeding your baby again. Pure lanolin is not poisonous (toxic) to your baby.
- Massaging some breast milk into your nipples:
  - Use your hand to squeeze out a few drops of breast milk (hand express).
  - Gently massage the milk into your nipple.
  - Let your nipple air-dry.

##### **Contact a health care provider if:**

- You have nipple pain.
- You have soreness or cracking that lasts more than 1 week.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Discharge Documentation***

#### **Summary**

- It is normal to have some tenderness in your nipples when you start to breastfeed your new baby. However, you should contact your health care provider if you have nipple pain.
- Cracked or sore nipples are most often caused by a poor latch or improper positioning.
- To help with cracked or sore nipples, make sure your baby is latched on to your breast and positioned correctly, and keep your nipples healthy and moisturized. Use lanolin or expressed milk on your nipples. Avoid washing your nipples with soap.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

W9999 Patient treated

Patient presents for Composite fillingUR. Patient identification confirmed with full name and date of birth.

Special duty status: None

Current health questionnaire reviewed, no changes or significant findings.

Medications reconciled.

Treatment plan and radiographs reviewed.

Pre-procedural checklist: verified sterilization process, equipment, procedure and site. Verbal and written consent obtained from Patient.

Time out accomplished immediately prior to initiation of procedure and reverification was continued throughout procedure.

The dental team (Dr. Zachary Ross, Mrs. Martinson & Mrs. Blanco) completed extra-oral and intraoral pre-procedure verification, utilized occlusal paper to mark the procedure site and performed a time out prior to initiating treatment. Re-verification was continuous throughout the procedure.

Topical Benzocaine 20% placed.

Administered 1.7 ml Lidocaine HCL, 2% with Epinephrine 1:100,000.

Tooth #4 DO Composite.

Diagnosis: primary caries.

Isolite isolation.

Base, liner or other material placed: None

Patient Name: **Amieva, Yessenia**

24yo G2P1 at 16+5w gestation with subchorionic hematoma diagnosed with fetal demise with fetal part through cervix. KU Dr. Megan Thomas accepted for transfer for IOL., Eval...

#### **History of Present Illness**

24-year-old G2 P1 currently 16 weeks' gestation with subchorionic hemorrhage diagnosed at 12 weeks has been having brown bleeding for 2 weeks followed by bright red copious bleeding starting 4 hours before arrival. Patient notes that she is saturating approximately 2-3 pads per hour at this point. She reports no fetal movement. However, she hasn't noticed a lot of movement anyway from the beginning. She notes that she is not having

Skin: Warm, No new rashes or lesions

Neuro: GCS 15, CNII-XII intact,

Psych: A&Ox4, Appropriate mood and affect

### **Medical Decision Making**

The patient is a very well-appearing 24-year-old female not in acute distress.

Her vital signs are all within normal limits.

My impression is threatened miscarriage. She has a four-week history of subchorionic hemorrhage previously diagnosed. Missed abortion, fetal demise, UTI, BV, internal bleeding are all possible but less likely.

We'll get an ultrasound, basic OB labs, and we'll reevaluate. Patient's on any pain and declines pain medication here in the emergency department. She is Blood type A Pos so no role for RhoGAM.

update:

Called by radiology who notes patient's fetus has no heartbeat. He notes fetal demise is most likely diagnosis. He also notes there is no fetal movement as well. We will consult OB/GYN for recommendations.

update:

Discussed case with OB/GYN who is familiar with the patient and not she will come down to see her.

update:

After seeing patient and reviewing all labs and imaging, OB/GYN the patient needs to be transferred to KU for dilation and evacuation versus induction. Patient notes that she prefers induction. OB/GYN notes that she will arrange the transfer and coordinate with KU. Patient to be transferred at this time via EMS to KU.

**History of Present Illness**

Pt is a 24-year-old female who presents for evaluation of recurring episodes of nausea and vomiting today as well as diarrhea. She has some occasional abdominal cramping. It is approximately 15 weeks pregnant. Patient is a gravida 2 para 1. Patient is nontoxic-appearing. Patient has no current abdominal pain. She has a history of a recent subchorionic bleed. She had some scant spotting yesterday. Patient has prior ultrasounds for this pregnancy. Awake alert and nontoxic-appearing. Patient's husband also here for gastrointestinal symptoms.

**Review of Systems**

**Constitutional:** no fever, no chills, no sweats, mild weakness, normal appetite.

**Respiratory:** no shortness of breath, no cough, no wheezing.

**Cardiovascular:** no chest pain.

**Gastrointestinal:** mild nausea, mild vomiting, no constipation, mild diarrhea, mild abdominal pain.

**Additional ROS info:** Except as noted in the above Review of Symptoms and in the History of Present Illness and all other systems have been reviewed and are negative or noncontributory.

**Physical Exam****Vitals & Measurements**

**T:** 37 °C (Oral) **HR:** 101(Peripheral) **RR:** 20 **BP:** 114/78 **SpO2:** 97%

**WT:** 87.10 kg(Dosing) **WT:** 87.1 kg(Measured)

GEN: Well-nourished, well-developed. Mild acute distress

CV: Regular rate and rhythm. No murmurs, rubs or gallops.

RESP: No increased work of breathing. Clear to auscultation bilaterally.

ABD: Soft, nontender, gravid uterus, nondistended without peritoneal sign

HEENT: Atraumatic and normocephalic. OP clear. Uvula midline. No masses. No lymphadenopathy. No rhinorrhea. Pupils equal, round and reactive to light bilaterally. TM's clear.

EXT: Warm and well-perfused. No edema. No tenderness to palpation.

NEURO: A&O. No gross deficits appreciated

SKIN: No lesions, rashes or open wounds

BACK: Non-tender. No midline TTP. No e/o trauma. No meningismus.

**Medical Decision Making**

DDX: UTI, dehydration, pregnancy related issue, COVID related issue

**Reexamination/Reevaluation**

2145 stable, fetal heart tones 160. Patient benign-appearing at this time. Dehydration noted. Close follow-up recommended. Quarters note for tomorrow given. Prescription for Zofran given. No occasion for admission at this time.

#### **Chief Complaint**

Pt reports continued vaginal bleeding today. Pt started bleeding after PT yesterday. Pt was seen in ED yesterday, but is concerned because the bleeding is still there. Pt is not having any pain.

#### **Assessment/Plan**

1. Vaginal bleeding complicating early pregnancy

Ordered:

Discharge Patient

2. Other hemorrhage in early pregnancy

Ordered:

Discharge Patient

3. Antepartum hemorrhage, unspecified, second trimester

Ordered:

Discharge Patient

Orders:

Fetal Heart Monitor External

#### **History of Present Illness**

24-year-old female approximately 14 weeks OB G2, P1 presents the emergency department complaining of vaginal spotting with dark brown blood when she wipes. Patient was seen by me yesterday in the department for having some vaginal cramping and spotting after PT yesterday morning but these had resolved by the time she was evaluated emergency department. Patient states that the vaginal spotting restarted again

**Psychiatric:** cooperative yes, affect normal,

### **Medical Decision Making**

1930 Spoke with Dr. Long (OB on call). Patient is to call office tomorrow to schedule maternal Fetal health appointment for follow-up. States that there is nothing to do currently as far as medication intervention to prevent miscarriage. States that patient should be instructed to have complete pelvic rest.

Discussed with patient that with her subchorionic hemorrhage she may continue to spot. Discussed avoiding activities which cause her to have vaginal pain or abdominal cramping and increased bleeding. Discussed having complete pelvic rest i.e. nothing to enter the vagina including intercourse, tampons, or douching. Fetal heart tones in the 160s. Discussed that this is a concern for patient. Explained that I cannot predict whether she will carry to term or have a miscarriage. Explained that with this according hemorrhage her risk is increased but that this is not anything she is doing to cause a miscarriage. Offered pelvic exam but patient declined. Plan for discharge home and to call OB tomorrow to discuss setting up appointment with maternal-fetal medicine. Discussed return the emergency department for increased bleeding, vaginal cramping, passing clots, new or worsening symptoms. Patient verbalized understanding and all questions addressed. Discussed maintaining p.o. hydration.

### **Basic Information**

**Time Seen:**  
ALLEN, TODD D, PA 11/26/2022 17:34

#### Chief Complaint

Pt tested covid positive yesterday and positive HCG here last week. Pt read on the internet that covid was bad for pregnancy. Wants to be evaluated to ensure that pregnancy is fine.

#### **Assessment/Plan**

1. COVID-19

Monitor condition. Push fluids to ensure proper hydration. Diet and activity as tolerated. Follow-up with PCP, and OB physician this coming week for reevaluation. Isolate/quarantine at home, per CDC recommendations. Return to the emergency room if condition changes or worsens.

#### **History of Present Illness**

Patient comes emergency room for evaluation. Patient is approximately 14 weeks pregnant, and tested positive for COVID yesterday. Patient wants to ensure there is no further treatment that needs to be provided for her due to her illness, and pregnancy. Patient denies fevers, headache, sore throat, lightheadedness, syncope, neck pain, meningeal signs, chest pain, shortness of breath, palpitations, abdominal pain, nausea, vomiting, diarrhea, dysuria, vaginal bleeding, vaginal discharge, rashes.

#### **Review of Systems**

Except as noted in the above HPI, all other systems have been reviewed and are negative or noncontributory.

#### **Physical Exam**

##### Vitals & Measurements

**T:** 36.8 °C (Temporal Artery) **HR:** 104(Peripheral) **RR:** 18 **BP:** 127/86 **SpO2:** 95%

## **Emergency Documentation**

### **History of Present Illness**

24 old female G2, P1 states last menstrual period likely in August but she has not been closely tracking it, surgical history of cholecystectomy, currently breast-feeding her child, who presents the emergency department with heavy bleeding and cramping 2 days ago, bleeding subsequently stopped and now she is having light spotting, had a positive home pregnancy test, menstrual cycle is currently irregular, patient otherwise denies fevers or chills, notes pain is minimal lower abdominal region, not passing large clots no feeling dizzy or like she is going to pass out, no vaginal discharge, no diarrhea melena hematochezia, no rashes or skin lesions, no prior cesarean sections or gynecologic procedures reported.

### **Review of Systems**

Positive and pertinent negatives as per HPI. All other systems were reviewed and are negative.

### **Physical Exam**

#### Vitals & Measurements

**T:** 36.6 °C (Temporal Artery) **HR:** 88(Peripheral) **RR:** 18 **BP:** 133/78 **SpO2:** 98%  
**WT:** 89.5 kg(Measured) **WT:** 89.50 kg(Dosing)

Constitutional: Well-nourished, interactive, playful, NAD

Eyes: Normal Lids/lashes, anicteric conjunctiva, EOMI

HEENT: Atraumatic appearance, Fontanelle is OPEN/CLOSED/FLAT/NOT BULGING, Moist MM, TMs and external canals wnl bilaterally, Oropharynx is normal in appearance

Neck: Supple, Trachea midline, full non-painful ROM

CVS: RRR, No M/R/G, capillary refill less than 2 seconds

RESP: Normal respiratory effort, CTAB, No adventitious breath sounds on auscultation

GI: Normal appearance, BSx4 present, NTND

GU:

MSK: All 4 extremities normal inspection, normal muscle tone, full ROM

Skin: Warm, No new rashes or lesions

Neuro: GCS 15, Age appropriate, MAE

### **Medical Decision Making**

24 year-old female patient presents to the ED with vaginal bleeding in the first trimester  
Patient is afebrile, hemodynamically stable in NAD

Exam notable for: Otherwise well-appearing female in no acute distress

Labs obtained: CBC with diff, CMP, ABO RH, UA, Serum HCG

OB US < 14 weeks obtained and reviewed by me and notable for: Subchorionic hematoma otherwise intrauterine pregnancy

Interventions: NIBP monitoring, SPO2 monitoring, Telemetry, IV access

Consult:

Considered Ectopic Pregnancy, TOA, Miscarriage, Cervicitis, Ovarian Torsion, diverticulitis, PID, Pyelonephritis, UTI, polyp/mass, fibroids, laceration, molar pregnancy

Patient with likely: Threatened miscarriage, discussed with Dr. Chaffin of OB/GYN she recommends outpatient close follow-up and states OB will call patient to schedule appointment

Patient will be discharged home. Pt was given SRP and instructions for followup. All questions answered.

### **History of Present Illness**

Previously healthy 24-year-old female complaining of mid-low back pain that radiates to the epigastric area. Patient was woken up from sleep by the pain at 0330. Describes pain as a band across both sides of the back and radiating to the epigastric area. Pain is described as intermittent and sharp. Pain is associated nausea but no vomiting. Pain is worsened by movement. Denies any diarrhea or constipation. Denies any bothersome LUTS. Denies any vaginal bleeding or vaginal discharge. Denies any history of STIs or concern for STI exposures. Patient denies any systemic symptoms, no fevers or chills. No prior abdominal surgeries. No recent trauma. Patient currently reports getting over mild, flulike symptoms. Patient denies any chest pain or any difficulty breathing. Denies any cough.

### **Review of Systems**

- CONSTITUTIONAL: Denies weight loss, fever and chills.
- HEENT: Denies changes in vision and hearing.
- RESPIRATORY: Denies dyspnea and cough.
- CV: Denies palpitations, chest pain and BLE edema.
- GI: Reports abdominal pain, nausea. Denies vomiting and diarrhea or constipation.
- GU: Denies frequency, urgency and dysuria.
- MSK: Reports low to mid back pain.
- SKIN: Denies rash and pruritus.
- NEUROLOGICAL: Denies headache and syncope.
- PSYCHIATRIC: Denies recent changes in mood. Denies anxiety and depression.

### **Physical Exam**

#### **Vitals & Measurements**

**T:** 37 °C (Temporal Artery) **HR:** 86(Peripheral) **RR:** 18 **BP:** 119/64 **SpO2:** 97%  
**WT:** 99 kg(Measured) **WT:** 99.00 kg(Dosing)

GENERAL APPEARANCE: AxOx4, generally well-appearing , no acute distress.

HEENT: PERRL, MMM. EOMI, clear conjunctiva, oropharynx clear.

NECK: Supple without lymphadenopathy. No menigismus.

HEART: Normal rate and regular rhythm, normal S1/S1, no m/r/g

### **Medication Administration**

#### **Given**

ketoSOL30, 15 mg, IV Push (Intravenous)

## ***Emergency Documentation***

LUNGS: CTAB, moving air well. No crackles or wheezes are heard.

ABDOMEN: Soft, nontender, nondistended with good bowel sounds heard.

BACK: No CVAT, no obvious deformity. No midline spinal TTP.

EXTREMITIES: Without cyanosis, clubbing or edema.

NEUROLOGICAL: Grossly nonfocal. Alert and oriented, moving all 4 extremities. CN not formally tested but appear grossly intact. Observed to ambulate with normal gait.

Skin: Warm and dry without any rash.

**Medical Decision Making**

Pt presents w/ mid-back pain radiating to epigastric area. Pt well appearing and non-toxic in appearance. VS significant for mild tachycardia. Labs significant for leukocytosis and transaminitis. ED RUQUS shows gallstone in GB w/ some GB wall thickening. Unable to visualize CBD. Pt sent for comprehensive US.

Turned over to Dr. Ingle.

B. PHYSICIAN'S CERTIFICATE OF TRANSFER

I certify that based on the information available to me at the time of transfer, the medical benefits reasonably expected for the provision of appropriate medical care of another medical facility outweighs the increased risk to the individual (or unborn child in the case of labor) from effecting the transfer.

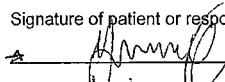

Reason for Transfer:

- ( ) Needed specialty care not available at this institution. Reason: \_\_\_\_\_  
( ) Bed space unavailable.  
( ) Professional staff not available to care for patient.  
( ) Other: \_\_\_\_\_

Physicians Signature 

C. PATIENT CONSENT

I consent to transfer to another medical facility. I understand that it is the opinion of the physician responsible for my care that the benefits of transfer outweigh the risks of transfer. I have been informed of the risks and benefits upon which the transfer is being made. I have considered these risks and benefits and consent to transfer. I consent to the release of my medical records to the facility to which I am being transferred.

Signature of patient or responsible person: 

Date 12/20/22 Time 1841 Witness Liyin Lee, RN

D. PATIENT INITIATED REQUEST FOR TRANSFER

After considering the above information I request upon my own suggestion and not that of the hospital, physician or any other person associated with the hospital that I, the patient, be transferred to: \_\_\_\_\_

Signature of patient or responsible person: \_\_\_\_\_

Date \_\_\_\_\_ Time \_\_\_\_\_ Witness \_\_\_\_\_

E. PATIENT REFUSAL

I understand that the hospital has offered to examine me to determine whether I am suffering from an emergency medical condition, to provide necessary treatment to stabilize my condition and to provide a medically appropriate transfer to another medical facility. The hospital and physician have informed me of the benefits and risks that I might reasonably be expected from the offered services. I understand that my refusal may result in worsening of my condition and could pose a threat to my life, health and medical safety. I refuse the offered services.

Signature of patient or responsible person

#### **Patient Education Materials:**

Miscarriage; Managing Pregnancy Loss

## **Miscarriage**

A miscarriage is the loss of pregnancy before the 20th week. Most miscarriages happen during the first 3 months of pregnancy. Sometimes, a miscarriage can happen before a woman knows that she is pregnant.

Having a miscarriage can be an emotional experience. If you have had a miscarriage, talk with your health care provider about any questions you may have about the loss of your baby, the grieving process, and your plans for future pregnancy.

### **What are the causes?**

Many times, the cause of a miscarriage is not known.

### **What increases the risk?**

The following factors may make a pregnant woman more likely to have a miscarriage:

#### **Certain medical conditions**

- Conditions that affect the hormone balance in the body, such as thyroid disease or polycystic ovary syndrome.
- Diabetes.
- Autoimmune disorders.
- Infections.
- Bleeding disorders.
- Obesity.

#### **Lifestyle factors**

- Using products with tobacco or nicotine in them or being exposed to tobacco smoke.
- Having alcohol.
- Having large amounts of caffeine.
- Recreational drug use.

#### **Problems with reproductive organs or structures**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Cervical insufficiency. This is when the lowest part of the uterus (cervix) opens and thins before pregnancy is at term.
- Having a condition called Asherman syndrome. This syndrome causes scarring in the uterus or causes the uterus to be abnormal in structure.
- Fibrous growths, called fibroids, in the uterus.
- Congenital abnormalities. These problems are present at birth.
- Infection of the cervix or uterus.

### **Personal or medical history**

- Injury (trauma).
- Having had a miscarriage before.
- Being younger than age 18 or older than age 35.
- Exposure to harmful substances in the environment. This may include radiation or heavy metals, such as lead.
- Use of certain medicines.

### **What are the signs or symptoms?**

Symptoms of this condition include:

- Vaginal bleeding or spotting, with or without cramps or pain.
- Pain or cramping in the abdomen or lower back.
- Fluid or tissue coming out of the vagina.

### **How is this diagnosed?**

This condition may be diagnosed based on:

- A physical exam.
- Ultrasound.
- Lab tests, such as blood tests, urine tests, or swabs for infection.

### **How is this treated?**

Treatment for a miscarriage is sometimes not needed if all the pregnancy tissue that was in the uterus comes out on its own, and there are no other problems such as infection or heavy bleeding.

In other cases, this condition may be treated with:

- Dilation and curettage (D&C). In this procedure, the cervix is stretched open and any remaining pregnancy tissue is removed from the lining of the uterus (endometrium).
- Medicines. These may include:

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Antibiotic medicine, to treat infection.
- Medicine to help any remaining pregnancy tissue come out of the body.
- Medicine to reduce (contract) the size of the uterus. These medicines may be given if there is a lot of bleeding.

If you have Rh-negative blood, you may be given an injection of a medicine called Rho(D) immune globulin. This medicine helps prevent problems with future pregnancies.

### **Follow these instructions at home:**

#### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed antibiotic medicine, take it as told by your health care provider. **Do not** stop taking the antibiotic even if you start to feel better.

#### **Activity**

- Rest as told by your health care provider. Ask your health care provider what activities are safe for you.
- Have someone help with home and family responsibilities during this time.

#### **General instructions**

- Monitor how much tissue or blood clot material comes out of the vagina.
- **Do not** have sex, douche, or put anything, such as tampons, in your vagina until your health care provider says it is okay.
- To help you and your partner with the grieving process, talk with your health care provider or get counseling.
- When you are ready, meet with your health care provider to discuss any important steps you should take for your health. Also, discuss steps you should take to have a healthy pregnancy in the future.
- Keep all follow-up visits. This is important.

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

#### **Contact a health care provider if:**

- You have a fever or chills.
- There is bad-smelling fluid coming from the vagina.
- You have more bleeding instead of less.
- Tissue or blood clots come out of your vagina.

#### **Get help right away if:**

- You have severe cramps or pain in your back or abdomen.
- Heavy bleeding soaks through 2 large sanitary pads an hour for more than 2 hours.
- You become light-headed or weak.
- You faint.
- You feel sad, and your sadness takes over your thoughts.
- You think about hurting yourself.

**If you ever feel like you may hurt yourself or others, or have thoughts about taking your own life, get help right away. Go to your nearest emergency department or:**

- Call your local emergency services (**911 in the U.S.**).
- Call a suicide crisis helpline, such as the National Suicide Prevention Lifeline at **1-800-273-8255**. This is open 24 hours a day in the U.S.
- Text the Crisis Text Line at **741741** (in the U.S.).

#### **Summary**

- Most miscarriages happen in the first 3 months of pregnancy. Sometimes miscarriage happens before a woman knows that she is pregnant.
- Follow instructions from your health care provider about medicines and activity.
- To help you and your partner with grieving, talk with your health care provider or get counseling.
- Keep all follow-up visits.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

## **Managing Pregnancy Loss**

Pregnancy loss can happen any time during a pregnancy. Often the cause is not known. It is rarely because of anything you did. Pregnancy loss in early pregnancy (during the first trimester) is called a miscarriage. This type of pregnancy loss is the most common. Pregnancy loss that happens after 20 weeks of pregnancy is called fetal demise

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

if the baby's heart stops beating before birth. Fetal demise is much less common. Some women experience spontaneous labor shortly after fetal demise resulting in a stillborn birth (stillbirth).

Any pregnancy loss can be devastating. You will need to recover both physically and emotionally. Most women are able to get pregnant again after a pregnancy loss and deliver a healthy baby.

### **How to manage emotional recovery**

Pregnancy loss is very hard emotionally. You may feel many different emotions while you grieve. You may feel sad and angry. You may also feel guilty. It is normal to have periods of crying. Emotional recovery can take longer than physical recovery. It is different for everyone.

Taking these steps can help you in managing this loss:

- Remember that it is unlikely you did anything to cause the pregnancy loss.
- Share your thoughts and feelings with friends, family, and your partner. Remember that your partner is also recovering emotionally.
- Make sure you have a good support system. **Do not** spend too much time alone.
- Meet with a pregnancy loss counselor or join a pregnancy loss support group.
- Get enough sleep and eat a healthy diet. Return to regular exercise when you have recovered physically.
- **Do not** use drugs or alcohol to manage your emotions.
- Consider seeing a mental health professional to help you recover emotionally.
- Ask a friend or loved one to help you decide what to do with any clothing and nursery items you received for your baby.

In the case of a stillbirth, many women benefit from taking additional steps in the grieving process. You may want to:

- Hold your baby after the birth.
- Name your baby.
- Request a birth certificate.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Create a keepsake such as handprints or footprints.
- Dress your baby and have a picture taken.
- Make funeral arrangements.
- Ask for a baptism or blessing.

Hospitals have staff members who can help you with all these arrangements.

### **How to recognize emotional stress**

It is normal to have emotional stress after a pregnancy loss. But emotional stress that lasts a long time or becomes severe requires treatment. Watch out for these signs of severe emotional stress:

- Sadness, anger, or guilt that is not going away and is interfering with your normal activities.
- Relationship problems that have occurred or gotten worse since the pregnancy loss.
- Signs of depression that last longer than 2 weeks. These may include:
  - Sadness.
  - Anxiety.
  - Hopelessness.
  - Loss of interest in activities you enjoy.
  - Inability to concentrate.
  - Trouble sleeping or sleeping too much.
  - Loss of appetite or overeating.
  - Thoughts of death or of hurting yourself.

### **Follow these instructions at home:**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- Rest at home until your energy level returns. Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- When you are ready, meet with your health care provider to discuss steps to take for a future pregnancy.
- Keep all follow-up visits as told by your health care provider. This is important.

### **Where to find support**

- To help you and your partner with the process of grieving, talk with your health care provider or seek counseling.
- Consider meeting with others who have experienced pregnancy loss. Ask your health care provider about support groups and resources.

### **Patient Education Materials:**

COVID-19: What to Do If You Are Sick - CDC (12/08/2021); Second Trimester of Pregnancy; Dehydration, Adult

# **COVID-19: What to Do if You Are Sick**

CDC has updated [isolation and quarantine](#) recommendations for the public, and is revising the CDC website to reflect these changes. These recommendations do not apply to [healthcare personnel](#) and do not supersede state, local, tribal, or territorial laws, rules, and regulations.

If you have a fever, cough or [other symptoms](#), you might have COVID-19. Most people have mild illness and are able to recover at home. If you are sick:

- Keep track of your symptoms.
- If you have [an emergency warning sign](#) (including trouble breathing), call 911.

### **Steps to help prevent the spread of COVID-19 if you are sick**

If you are sick with COVID-19 or think you might have COVID-19, follow the steps below to care for yourself and to help protect other people in your home and community.

#### **Stay home except to get medical care**

- **Stay home.** Most people with COVID-19 have mild illness and can recover at home without medical care. Do not leave your home, except to get medical care. Do not visit public areas.
- **Take care of yourself.** Get rest and stay hydrated. Take over-the-counter medicines, such as acetaminophen, to help you feel better.
- **Stay in touch with your doctor.** Call before you get medical care. Be sure to get care if you have trouble breathing, or have any other [emergency warning signs](#), or if you think it is an [emergency](#).
- **Avoid public transportation**, ride-sharing, or taxis.

#### **Separate yourself from other people**

As much as possible, stay in a specific room and away from other people and pets in your home. If possible, you should use a separate bathroom. If you need to be around other people or animals in or outside of the home, wear a mask.

Tell your [close contacts](#) that they may have been exposed to COVID-19. An infected person can spread COVID-19 starting 48 hours (or 2 days) before the person has any symptoms or tests positive. By letting your close contacts know they may have been exposed to COVID-19, you are helping to protect everyone.

- Additional guidance is available for those living in [close quarters](#) and [shared housing](#).
- See [COVID-19 and Animals](#) if you have questions about pets.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- If you are diagnosed with COVID-19, someone from the health department may call you. [Answer the call](#) to slow the spread.

#### **Monitor your symptoms**

- **Symptoms of COVID-19 include fever, cough, or other symptoms.**
- **Follow care instructions from your healthcare provider and local health department.** Your local health authorities may give instructions on checking your symptoms and reporting information.

#### **When to seek emergency medical attention**

Look for **emergency warning signs\*** for COVID-19. If someone is showing any of these signs, **seek emergency medical care immediately**:

- Trouble breathing
- Persistent pain or pressure in the chest
- New confusion
- Inability to wake or stay awake
- Pale, gray, or blue-colored skin, lips, or nail beds, depending on skin tone

\*This list is not all possible symptoms. Please call your medical provider for any other symptoms that are severe or concerning to you.

**Call 911 or call ahead to your local emergency facility:** Notify the operator that you are seeking care for someone who has or may have COVID-19.

#### **Call ahead before visiting your doctor**

- **Call ahead.** Many medical visits for routine care are being postponed or done by phone or telemedicine.
- **If you have a medical appointment that cannot be postponed, call your doctor's office,** and tell them you have or may have COVID-19. This will help the office protect themselves and other patients.

#### **Get**

- **tested** If you have [symptoms of COVID-19](#), get [tested](#). While waiting for [test results](#), you stay away from others, including staying apart from those living in your household.
- [Self-tests](#) are one of several options for [testing for the virus that causes COVID-19](#) and may be more convenient than laboratory-based tests and point-of-care tests. Ask your healthcare provider or your local health department if you need help interpreting your test results.
- You can visit your [state](#), [tribal](#), [local](#), and [territorial health department's website](#) to look for the latest local information on testing sites.

#### **If you are sick, wear a mask over your nose and mouth**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- You should wear a **mask** over your nose and mouth if you must be around other people or animals, including pets (even at home).
- You don't need to wear the mask if you are alone. If you can't put on a mask (because of trouble breathing, for example), cover your coughs and sneezes in some other way. Try to stay at least 6 feet away from other people. This will help protect the people around you.
- Masks should not be placed on young children under age 2 years, anyone who has trouble breathing, or anyone who is not able to remove the mask without help.

**Note:** During the COVID-19 pandemic, medical grade facemasks are reserved for healthcare workers and some first responders.

#### **Cover your coughs and sneezes**

- Cover your mouth and nose with a tissue when you cough or sneeze.
- Throw away used tissues in a lined trash can.
- Immediately wash your hands with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.

#### **Clean your hands often**

- Wash your hands often with soap and water for at least 20 seconds. This is especially important after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.
- Use hand sanitizer if soap and water are not available. Use an alcohol-based hand sanitizer with at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- Soap and water are the best option, especially if hands are visibly dirty.
- Avoid touching your eyes, nose, and mouth with unwashed hands.
- [Handwashing Tips](#)

#### **Avoid sharing personal household items**

- Do not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people in your home.
- Wash these items thoroughly after using them with soap and water or put in the dishwasher.

#### **Clean all "high-touch" surfaces every day**

- Clean and disinfect high-touch surfaces in your "sick room" and bathroom; wear disposable gloves. Let someone else clean and disinfect surfaces in common areas, but you should clean your bedroom and bathroom, if possible.
- If a caregiver or other person needs to clean and disinfect a sick person's bedroom or bathroom, they should do so on an as-needed basis. The caregiver/other person should wear a mask and disposable gloves prior to cleaning. They should wait as long as possible after the person who is sick has used the bathroom before coming in to clean and use the bathroom.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- High-touch surfaces include phones, remote controls, counters, tabletops, doorknobs, bathroom fixtures, toilets, keyboards, tablets, and bedside tables.
- **Clean and disinfect areas that may have blood, stool, or body fluids on them.**
- **Use household cleaners and disinfectants.** Clean the area or item with soap and water or another detergent if it is dirty. Then, use a household disinfectant.
  - Be sure to follow the instructions on the label to ensure safe and effective use of the product. Many products recommend keeping the surface wet for several minutes to ensure germs are killed. Many also recommend precautions such as wearing gloves and making sure you have good ventilation during use of the product.
  - Use a product from [EPA's List N: Disinfectants for Coronavirus \(COVID-19\)](#).
  - [Complete Disinfection Guidance](#)

### **When you can be around others after being sick with COVID-19**

Deciding when you can be around others is different for different situations. Find out when you can [safely end home isolation](#).

**For any additional questions about your care,** contact your healthcare provider or state or local health department.

## **Second Trimester of Pregnancy**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

The second trimester of pregnancy is from week 13 through week 27. This is months 4 through 6 of pregnancy. The second trimester is often a time when you feel your best. Your body has adjusted to being pregnant, and you begin to feel better physically.

During the second trimester:

- Morning sickness has lessened or stopped completely.
- You may have more energy.
- You may have an increase in appetite.

The second trimester is also a time when the unborn baby (fetus) is growing rapidly. At the end of the sixth month, the fetus may be up to 12 inches long and weigh about 1½ pounds. You will likely begin to feel the baby move (quicken) between 16 and 20 weeks of pregnancy.

## **Body changes during your second trimester**

Your body continues to go through many changes during your second trimester. The changes vary and generally return to normal after the baby is born.

### **Physical changes**

- Your weight will continue to increase. You will notice your lower abdomen bulging out.
- You may begin to get stretch marks on your hips, abdomen, and breasts.
- Your breasts will continue to grow and to become tender.
- Dark spots or blotches (chloasma or mask of pregnancy) may develop on your face.
- A dark line from your belly button to the pubic area (linea nigra) may appear.
- You may have changes in your hair. These can include thickening of your hair, rapid growth, and changes in texture. Some people also have hair loss during or after pregnancy, or hair that feels dry or thin.

### **Health changes**

- You may develop headaches.
- You may have heartburn.
- You may develop constipation.
- You may develop hemorrhoids or swollen, bulging veins (varicose veins).
- Your gums may bleed and may be sensitive to brushing and flossing.
- You may urinate more often because the fetus is pressing on your bladder.
- You may have back pain. This is caused by:
  - Weight gain.
  - Pregnancy hormones that are relaxing the joints in your pelvis.
  - A shift in weight and the muscles that support your balance.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

## **Follow these instructions at home:**

### **Medicines**

- Follow your health care provider's instructions regarding medicine use. Specific medicines may be either safe or unsafe to take during pregnancy. **Do not** take any medicines unless approved by your health care provider.
- Take a prenatal vitamin that contains at least 600 micrograms (mcg) of folic acid.

### **Eating and drinking**

- Eat a healthy diet that includes fresh fruits and vegetables, whole grains, good sources of protein such as meat, eggs, or tofu, and low-fat dairy products.
- Avoid raw meat and unpasteurized juice, milk, and cheese. These carry germs that can harm you and your baby.
- You may need to take these actions to prevent or treat constipation:
  - Drink enough fluid to keep your urine pale yellow.
  - Eat foods that are high in fiber, such as beans, whole grains, and fresh fruits and vegetables.
  - Limit foods that are high in fat and processed sugars, such as fried or sweet foods.

### **Activity**

- Exercise only as directed by your health care provider. Most people can continue their usual exercise routine during pregnancy. Try to exercise for 30 minutes at least 5 days a week. Stop exercising if you develop contractions in your uterus.
- Stop exercising if you develop pain or cramping in the lower abdomen or lower back.
- Avoid exercising if it is very hot or humid or if you are at a high altitude.
- Avoid heavy lifting.
- If you choose to, you may have sex unless your health care provider tells you not to.

### **Relieving pain and discomfort**

- Wear a supportive bra to prevent discomfort from breast tenderness.
- Take warm sitz baths to soothe any pain or discomfort caused by hemorrhoids. Use hemorrhoid cream if your health care provider approves.
- Rest with your legs raised (elevated) if you have leg cramps or low back pain.
- If you develop varicose veins:
  - Wear support hose as told by your health care provider.
  - Elevate your feet for 15 minutes, 3–4 times a day.
  - Limit salt in your diet.

### **Safety**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Wear your seat belt at all times when driving or riding in a car.
- Talk with your health care provider if someone is verbally or physically abusive to you.

### **Lifestyle**

- **Do not** use hot tubs, steam rooms, or saunas.
- **Do not** douche. **Do not** use tampons or scented sanitary pads.
- Avoid cat litter boxes and soil used by cats. These carry germs that can cause birth defects in the baby and possibly loss of the fetus by miscarriage or stillbirth.
- **Do not** use herbal remedies, alcohol, illegal drugs, or medicines that are not approved by your health care provider. Chemicals in these products can harm your baby.
- **Do not** use any products that contain nicotine or tobacco, such as cigarettes, e-cigarettes, and chewing tobacco. If you need help quitting, ask your health care provider.

### **General instructions**

- During a routine prenatal visit, your health care provider will do a physical exam and other tests. He or she will also discuss your overall health. Keep all follow-up visits. This is important.
- Ask your health care provider for a referral to a local prenatal education class.
- Ask for help if you have counseling or nutritional needs during pregnancy. Your health care provider can offer advice or refer you to specialists for help with various needs.

### **Where to find more information**

- American Pregnancy Association: [americanpregnancy.org](http://americanpregnancy.org)
- American College of Obstetricians and Gynecologists: [acog.org/en/Womens%20Health/Pregnancy](http://acog.org/en/Womens%20Health/Pregnancy)
- Office on Women's Health: [womenshealth.gov/pregnancy](http://womenshealth.gov/pregnancy)

### **Contact a health care provider if you have:**

- A headache that does not go away when you take medicine.
- Vision changes or you see spots in front of your eyes.
- Mild pelvic cramps, pelvic pressure, or nagging pain in the abdominal area.
- Persistent nausea, vomiting, or diarrhea.
- A bad-smelling vaginal discharge or foul-smelling urine.
- Pain when you urinate.
- Sudden or extreme swelling of your face, hands, ankles, feet, or legs.
- A fever.

### **Get help right away if you:**

- Have fluid leaking from your vagina.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Have spotting or bleeding from your vagina.
- Have severe abdominal cramping or pain.
- Have difficulty breathing.
- Have chest pain.
- Have fainting spells.
- Have not felt your baby move for the time period told by your health care provider.
- Have new or increased pain, swelling, or redness in an arm or leg.

## **Summary**

- The second trimester of pregnancy is from week 13 through week 27 (months 4 through 6).
- **Do not** use herbal remedies, alcohol, illegal drugs, or medicines that are not approved by your health care provider. Chemicals in these products can harm your baby.
- Exercise only as directed by your health care provider. Most people can continue their usual exercise routine during pregnancy.
- Keep all follow-up visits. This is important.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Elsevier Patient Education © 2022 Elsevier Inc.

# **Dehydration, Adult**

Dehydration is a condition in which there is not enough water or other fluids in the body. This happens when a person loses more fluids than he or she takes in. Important organs, such as the kidneys, brain, and heart, cannot function without a proper amount of fluids. Any loss of fluids from the body can lead to dehydration.

Dehydration can be mild, moderate, or severe. It should be treated right away to prevent it from becoming severe.

## **What are the causes?**

Dehydration may be caused by:

- Conditions that cause loss of water or other fluids, such as diarrhea, vomiting, or sweating or urinating a lot.
- Not drinking enough fluids, especially when you are ill or doing activities that require a lot of energy.
- Other illnesses and conditions, such as fever or infection.
- Certain medicines, such as medicines that remove excess fluid from the body (diuretics).
- Lack of safe drinking water.
- Not being able to get enough water and food.

## **What increases the risk?**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

The following factors may make you more likely to develop this condition:

- Having a long-term (chronic) illness that has not been treated properly, such as diabetes, heart disease, or kidney disease.
- Being 65 years of age or older.
- Having a disability.
- Living in a place that is high in altitude, where thinner, drier air causes more fluid loss.
- Doing exercises that put stress on your body for a long time (endurance sports).

### **What are the signs or symptoms?**

Symptoms of dehydration depend on how severe it is.

#### **Mild or moderate dehydration**

- Thirst.
- Dry lips or dry mouth.
- Dizziness or light-headedness, especially when standing up from a seated position.
- Muscle cramps.
- Dark urine. Urine may be the color of tea.
- Less urine or tears produced than usual.
- Headache.

#### **Severe dehydration**

- Changes in skin. Your skin may be cold and clammy, blotchy, or pale. Your skin also may not return to normal after being lightly pinched and released.
- Little or no tears, urine, or sweat.
- Changes in vital signs, such as rapid breathing and low blood pressure. Your pulse may be weak or may be faster than 100 beats a minute when you are sitting still.
- Other changes, such as:
  - Feeling very thirsty.
  - Sunken eyes.
  - Cold hands and feet.
  - Confusion.
  - Being very tired (lethargic) or having trouble waking from sleep.
  - Short-term weight loss.
  - Loss of consciousness.

### **How is this diagnosed?**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

This condition is diagnosed based on your symptoms and a physical exam. You may have blood and urine tests to help confirm the diagnosis.

### **How is this treated?**

Treatment for this condition depends on how severe it is. Treatment should be started right away. **Do not** wait until dehydration becomes severe. Severe dehydration is an emergency and needs to be treated in a hospital.

- Mild or moderate dehydration can be treated at home. You may be asked to:
  - Drink more fluids.
  - Drink an oral rehydration solution (ORS). This drink helps restore proper amounts of fluids and salts and minerals in the blood (electrolytes).
- Severe dehydration can be treated:
  - With IV fluids.
  - By correcting abnormal levels of electrolytes. This is often done by giving electrolytes through a tube that is passed through your nose and into your stomach (nasogastric tube, or NG tube).
  - By treating the underlying cause of dehydration.

### **Follow these instructions at home:**

#### **Oral rehydration solution**

If told by your health care provider, drink an ORS:

- Make an ORS by following instructions on the package.
- Start by drinking small amounts, about  $\frac{1}{2}$  cup (120 mL) every 5–10 minutes.
- Slowly increase how much you drink until you have taken the amount recommended by your health care provider.

#### **Eating and drinking**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Drink enough clear fluid to keep your urine pale yellow. If you were told to drink an ORS, finish the ORS first and then start slowly drinking other clear fluids. Drink fluids such as:
  - Water. **Do not** drink only water. Doing that can lead to hyponatremia, which is having too little salt (sodium) in the body.
  - Water from ice chips you suck on.
  - Fruit juice that you have added water to (diluted fruit juice).
  - Low-calorie sports drinks.
- Eat foods that contain a healthy balance of electrolytes, such as bananas, oranges, potatoes, tomatoes, and spinach.
- **Do not** drink alcohol.
- Avoid the following:
  - Drinks that contain a lot of sugar. These include high-calorie sports drinks, fruit juice that is not diluted, and soda.
  - Caffeine.
  - Foods that are greasy or contain a lot of fat or sugar.

#### **General instructions**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- **Do not** take sodium tablets. Doing that can lead to having too much sodium in the body (hypernatremia).

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- Keep all follow-up visits as told by your health care provider. This is important.

### **Contact a health care provider if:**

- You have muscle cramps, pain, or discomfort, such as:
  - Pain in your abdomen and the pain gets worse or stays in one area (localizes).
  - Stiff neck.
- You have a rash.
- You are more irritable than usual.
- You are sleepier or have a harder time waking than usual.
- You feel weak or dizzy.
- You feel very thirsty.

### **Get help right away if you have:**

- Any symptoms of severe dehydration.
- Symptoms of vomiting, such as:
  - You cannot eat or drink without vomiting.
  - Vomiting gets worse or does not go away.
  - Vomit includes blood or green matter (bile).
- Symptoms that get worse with treatment.
- A fever.
- A severe headache.
- Problems with urination or bowel movements, such as:
  - Diarrhea that gets worse or does not go away.
  - Blood in your stool (feces). This may cause stool to look black and tarry.
  - Not urinating, or urinating only a small amount of very dark urine, within 6–8 hours.
- Trouble breathing.

**These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call your local emergency services (911 in the U.S.). Do not drive yourself to the hospital.**

### **Summary**

- Dehydration is a condition in which there is not enough water or other fluids in the body. This happens when a person loses more fluids than he or she takes in.
- Treatment for this condition depends on how severe it is. Treatment should be started right away. **Do not** wait until dehydration becomes severe.

**Patient Education Materials:**

Warning Signs During Pregnancy; Activity Restriction During Pregnancy; Vaginal Bleeding During Pregnancy, Second Trimester

## **Warning Signs During Pregnancy**

During pregnancy, your body goes through many changes. Some changes may be uncomfortable, but most do not represent a serious problem. However, it is important to learn when certain signs and symptoms may indicate a problem. Talk with your health care provider about your current health and any medical conditions you have. Make sure you know the symptoms to watch for and report.

### **How does this affect me?**

#### **Warning signs during pregnancy**

Let your health care provider know if you have any of the following warning signs:

- Dizziness or feeling faint.
- Nausea, vomiting, or diarrhea that lasts 24 hours or longer.
- Spotting or bleeding from your vagina.
- Abdominal cramping or pain in your pelvis or lower back.
- Shortness of breath, difficulty breathing, or chest pain.
- New or increased pain, swelling, or redness in an arm or leg.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

### ***Emergency Documentation***

- Your baby is moving less than usual or is not moving.

You should also watch for signs of a serious medical condition called preeclampsia. This may include:

- A severe, throbbing headache that does not go away.
- Vision changes, such as blurred or double vision, light sensitivity, or seeing spots in front of your eyes.
- Sudden or extreme swelling of your face, hands, legs, or feet.

Pregnancy causes changes that may make it more likely for you to get an infection. Let your health care provider know if you have signs of infection, such as:

- A fever.
- A bad-smelling vaginal discharge.
- Pain or burning when you urinate.

### **How does this affect my baby?**

Throughout your pregnancy, always report any of the warning signs of a problem to your health care provider. This can help prevent complications that may affect your baby, including:

- Increased risk for premature birth.
- Infection that may be transmitted to your baby.
- Increased risk for stillbirth.

### **Follow these instructions at home:**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- Keep all follow-up visits. This is important.

### **Where to find more information**

- Office on Women's Health: [womenshealth.gov/pregnancy/](https://womenshealth.gov/pregnancy/)
- American College of Obstetricians and Gynecologists: [acog.org/womens-health/pregnancy](https://acog.org/womens-health/pregnancy)

### **Contact a health care provider if:**

- You have any warning signs of problems during your pregnancy.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Any of the following apply to you during your pregnancy:
  - You have strong emotions, such as sadness or anxiety, that interfere with work or personal relationships.
  - You feel unsafe in your home.
  - You are using tobacco products, alcohol, or drugs, and you need help to stop.

### **Get help right away if:**

- You have signs or symptoms of labor before 37 weeks of pregnancy. These include:
  - Contractions that are 5 minutes or less apart, or that increase in frequency, intensity, or length.
  - Sudden, sharp abdominal pain or low back pain.
  - Uncontrolled gush or trickle of fluid from your vagina.

### **Summary**

- Always report any warning signs to your health care provider to prevent complications that may affect both you and your baby.
- Talk with your health care provider about your current health and any medical conditions you have. Make sure you know the symptoms to watch for and report.
- Keep all follow-up visits. This is important.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

## **Activity Restriction During Pregnancy**

Your health care provider may recommend specific activity restrictions during pregnancy for a variety of reasons. Activity restriction may require that you limit activities that require great effort, such as exercise, lifting, or sex.

The type of activity restriction will vary for each person, depending on your risk or the problems you are having. Activity restriction may be recommended for a period of time until your baby is delivered.

### **Why are activity restrictions recommended?**

Activity restriction may be recommended if:

- Your placenta is partially or completely covering the opening of your cervix (placenta previa).
- There is bleeding between the wall of the uterus and the amniotic sac in the first trimester of pregnancy (subchorionic hemorrhage).
- You went into labor too early (preterm labor).

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- You have a history of miscarriage.
- You have a condition that causes high blood pressure during pregnancy (preeclampsia or eclampsia).
- You are pregnant with more than one baby.
- Your baby is not growing well.

### **What are the risks?**

The risks depend on your specific restriction. Strict bed rest has the most physical and emotional risks and is no longer routinely recommended. Risks of strict bed rest include:

- Loss of muscle conditioning from not moving.
- Blood clots.
- Social isolation.
- Depression.
- Loss of income.

Talk with your health care team about activity restriction to decide if it is best for you and your baby. Even if you are having problems during your pregnancy, you may be able to continue with normal levels of activity with careful monitoring by your health care team.

### **Follow these instructions at home:**

If needed, based on your overall health and the health of your baby, your health care provider will decide which type of activity restriction is right for you. Activity restrictions may include:

- Not lifting anything heavier than 10 pounds (4.5 kg).
- Avoiding activities that take a lot of physical effort.
- No lifting or straining.
- Resting in a sitting position or lying down for periods of time during the day.

**Pelvic rest** may be recommended along with activity restrictions. If pelvic rest is recommended, then:

- **Do not** have sex, an orgasm, or use sexual stimulation.
- **Do not** use tampons. **Do not** douche. **Do not** put anything into your vagina.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg).

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Avoid activities that require a lot of effort.
- Avoid any activity in which your pelvic muscles could become strained, such as squatting.

### **Questions to ask your health care provider**

- Why is my activity being limited?
- How will activity restrictions affect my body?
- Why is rest helpful for me and my baby?
- What activities can I do?
- When can I return to normal activities?

### **When should I seek immediate medical care?**

Seek immediate medical care if you have:

- Vaginal bleeding.
- Vaginal discharge.
- Cramping pain in your lower abdomen.
- Regular contractions.
- A low, dull backache.

### **Summary**

- Your health care provider may recommend specific activity restrictions during pregnancy for a variety of reasons.
- Activity restriction may require that you limit activities such as exercise, lifting, sex, or any other activity that requires great effort.
- Discuss the risks and benefits of activity restriction with your health care team to decide if it is best for you and your baby.
- Contact your health care provider right away if you think you are having contractions, or if you notice vaginal bleeding, discharge, or cramping.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

## **Vaginal Bleeding During Pregnancy, Second Trimester**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

A small amount of bleeding from the vagina, or spotting, is common during early pregnancy. Some bleeding may be related to the pregnancy, and some may not. In many cases, the bleeding is normal and is not a problem. However, bleeding can also be a sign of something serious.

Normal things may cause bleeding during the second trimester. They include:

- Rapid changes in blood vessels. This is caused by changes that are happening to the body during pregnancy.
- Sex.
- Pelvic exams.

Abnormal things that may cause bleeding during the second trimester include:

- Infection, inflammation, or growths on the cervix. The growths on the cervix are also called polyps.
- A condition in which the placenta partially or completely covers the opening of the cervix (placenta previa).
- The placenta separating from the uterus (placenta abruption).
- Miscarriage.
- Early labor, also called preterm labor.
- The cervix opening and thinning before pregnancy is at term and before labor starts (cervical insufficiency).
- A mass of tissue developing in the uterus due to an egg being fertilized incorrectly (molar pregnancy).

Tell your health care provider about any vaginal bleeding right away.

### **Follow these instructions at home:**

#### **Monitoring your bleeding**

Monitor your bleeding.

- Pay attention to any changes in your symptoms. Let your health care provider know about any concerns.
- Try to understand when the bleeding occurs. Does the bleeding start on its own, or does it start after something is done, such as sex or a pelvic exam?
- Use a diary to record the things you see about your bleeding, including:

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- The kind of bleeding you are having. Does the bleeding start and stop irregularly, or is it a constant flow?
- The severity of your bleeding. Is the bleeding heavy or light?
- The number of pads you use each day, how often you change them, and how soaked they are.
- Tell your health care provider if you pass tissue. He or she may want to see it.

### **Activity**

- Follow instructions from your health care provider about limiting your activity. Ask what activities are safe for you.
- **Do not** exercise or do activities that take a lot of effort unless your health care provider approves.
- **Do not** have sex until your health care provider says that this is safe.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- If needed, make plans for someone to help with your regular activities.

### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- **Do not** take aspirin because it can cause bleeding.

### **General instructions**

- **Do not** use tampons or douche.
- Keep all follow-up visits. This is important.

### **Contact a health care provider if:**

- You have vaginal bleeding during any time of your pregnancy.
- You have cramps or labor pains.
- You have a fever that does not get better when you take medicines.

### **Get help right away if:**

- You have severe cramps in your back or abdomen.
- You have contractions.
- You have chills.
- Your bleeding increases or you pass large clots or a large amount of tissue from your vagina.
- You feel light-headed or weak, or you faint.
- You are leaking fluid or have a gush of fluid from your vagina.

## **Subchorionic Hematoma**

Patient Name: **Amieva, Yessenia**

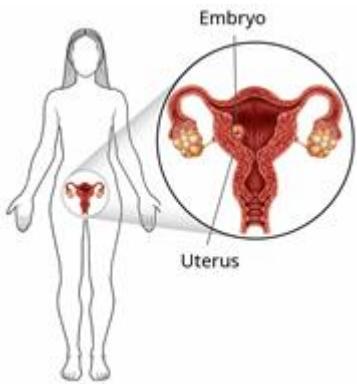

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

A hematoma is a collection of blood outside of the blood vessels. A subchorionic hematoma is a collection of blood between the outer wall of the embryo (chorion) and the inner wall of the uterus.

This condition can cause vaginal bleeding. Early small hematomas usually shrink on their own and do not affect your baby or pregnancy. When bleeding starts later in pregnancy, or if the hematoma is larger or occurs in older pregnant women, the condition may be more serious. Larger hematomas increase the chances of miscarriage. This condition also increases the risk of:

- Premature separation of the placenta from the uterus.
- Premature (preterm) labor.
- Stillbirth.

### **What are the causes?**

The exact cause of this condition is not known. It occurs when blood is trapped between the placenta and the uterine wall because the placenta has separated from the original site of implantation.

### **What increases the risk?**

You are more likely to develop this condition if:

- You were treated with fertility medicines.
- You became pregnant through in vitro fertilization (IVF).

### **What are the signs or symptoms?**

Symptoms of this condition include:

- Vaginal spotting or bleeding.
- Abdominal pain. This is rare.

Sometimes you may have no symptoms and the bleeding may only be seen when ultrasound images are taken (transvaginal ultrasound).

### ***Emergency Documentation***

## **How is this diagnosed?**

This condition is diagnosed based on a physical exam. This includes a pelvic exam. You may also have other tests, including:

- Blood tests.
- Urine tests.
- Ultrasound of the abdomen.

## **How is this treated?**

Treatment for this condition can vary. Treatment may include:

- Watchful waiting. You will be monitored closely for any changes in bleeding.
- Medicines.
- Activity restriction. This may be needed until the bleeding stops.
- A medicine called Rh immunoglobulin. This is given if you have an Rh-negative blood type. It prevents Rh sensitization.

## **Follow these instructions at home:**

- Stay on bed rest if told to do so by your health care provider.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told by your health care provider.
- Track and write down the number of pads you use each day and how soaked (saturated) they are.
- **Do not** use tampons.
- Keep all follow-up visits. This is important. Your health care provider may ask you to have follow-up blood tests or ultrasound tests or both.

## **Contact a health care provider if:**

- You have any vaginal bleeding.
- You have a fever.

## **Get help right away if:**

- You have severe cramps in your stomach, back, abdomen, or pelvis.
- You pass large clots or tissue. Save any tissue for your health care provider to look at.
- You faint.
- You become light-headed or weak.

## **Summary**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- A subchorionic hematoma is a collection of blood between the outer wall of the embryo (chorion) and the inner wall of the uterus.
- This condition can cause vaginal bleeding.
- Sometimes you may have no symptoms and the bleeding may only be seen when ultrasound images are taken.
- Treatment may include watchful waiting, medicines, or activity restriction.
- Keep all follow-up visits. Get help right away if you have severe cramps or heavy vaginal bleeding.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

COVID-19: Quarantine and Isolation - CDC (01/27/22); COVID-19 Frequently Asked Questions; 10 Things You Can Do to Manage Your COVID-19 Symptoms at Home - CDC (07/16/2021)

## **COVID-19: Quarantine and Isolation**

### **Quarantine**

#### **If you were exposed**

Quarantine and stay away from others when you have been in close contact with someone who has COVID-19.

### **Isolate**

#### **If you are sick or test positive**

Isolate when you are sick or when you have COVID-19, even if you don't have symptoms.

### **When to stay home**

#### **Calculating quarantine**

The date of your exposure is considered day 0. **Day 1 is the first full day after your last contact with a person who has had COVID-19.** Stay home and away from other people for at least 5 days. [Learn why CDC updated guidance for the general public.](#)

#### **IF YOU were exposed to COVID-19 and are NOT**

[up-to-date](#) **IF YOU were exposed to COVID-19 and are NOT on COVID-19 vaccinations**

- **Quarantine for at least 5 days**
  - **Stay home**
    - Stay home and quarantine for at least 5 full days.
    - Wear a well-fitted mask if you must be around others in your home.
  - **Do not travel.**
  - **Get tested**
    - Even if you don't develop symptoms, get tested at least 5 days after you last had close contact with someone with COVID-19.
- **After quarantine**
  - **Watch for symptoms**
    - Watch for symptoms until 10 days after you last had close contact with someone with COVID-19.
  - **Avoid travel**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- It is best to avoid travel until a full 10 days after you last had close contact with someone with COVID-19.
- **If you develop symptoms**
- Isolate immediately and get tested. Continue to stay home until you know the results. Wear a well-fitted mask around others.
- **Take precautions until day 10**
  - **Wear a mask**
  - Wear a well-fitted mask for 10 full days any time you are around others inside your home or in public. Do not go to places where you are unable to wear a mask.
  - **If you must travel during days 6–10, take precautions.**
  - **Avoid being around people who are at high risk**

**IF YOU were exposed to COVID-19 and are**

up-to-date **IF YOU were exposed to COVID-19 and are on COVID-19 vaccinations**

- **No quarantine**
  - You do not need to stay home **unless** you develop symptoms.
- **Get tested**
  - Even if you don't develop symptoms, get tested at least 5 days after you last had close contact with someone with COVID-19.
- **Watch for symptoms**
  - Watch for symptoms until 10 days after you last had close contact with someone with COVID-19.
  - **If you develop symptoms**
  - Isolate immediately and get tested. Continue to stay home until you know the results. Wear a well-fitted mask around others.
- **Take precautions until day 10**
  - **Wear a mask**
  - Wear a well-fitted mask for 10 full days any time you are around others inside your home or in public. Do not go to places where you are unable to wear a mask.
  - **Take precautions if traveling**
  - **Avoid being around people who are at high risk**

**IF YOU were exposed to COVID-19 and had confirmed COVID-19 within the past 90 days (you tested positive using a viral test)**

- **No quarantine**
  - You do not need to stay home **unless** you develop symptoms.
- **Watch for symptoms**
  - Watch for symptoms until 10 days after you last had close contact with someone with COVID-19.
  - **If you develop symptoms**

Patient Name: **Amieva, Yessenia**

Veterans ID (ICN):

## ***Emergency Documentation***

Contact with someone infected with SARS-CoV-2, the virus that causes COVID-19, in a way that increases the likelihood of getting infected with the virus.

### **Close contact**

A close contact is someone who was less than 6 feet away from an infected person (laboratory-confirmed or a clinical diagnosis) for a cumulative total of 15 minutes or more over a 24-hour period. For example, three individual 5-minute exposures for a total of 15 minutes. People who are exposed to someone with COVID-19 after they completed at least 5 days of isolation are not considered close contacts.

### **Quarantine**

**Quarantine** is a strategy used to prevent transmission of COVID-19 by keeping people who have been in [close contact](#) with someone with COVID-19 apart from others.

### **Who does not need to quarantine?**

If you had close contact with someone with COVID-19 and you are in one of the following groups, you **do not need to quarantine**.

- You are [up to date](#) with your COVID-19 vaccines.
- You had confirmed COVID-19 within the last 90 days (meaning you tested positive using a [viral test](#)).

You should wear a [well-fitting mask](#) around others for 10 days from the date of your last close contact with someone with COVID-19 (the date of last close contact is considered day 0). [Get tested](#) at least 5 days after you last had close contact with someone with COVID-19. If you test positive or develop COVID-19 symptoms, isolate from other people and follow recommendations in the [Isolation](#) section below. If you tested positive for COVID-19 with a [viral test](#) within the previous 90 days and subsequently recovered and remain without COVID-19 symptoms, you do not need to quarantine or get tested after close contact. You should wear a [well-fitting mask](#) around others for 10 days from the date of your last close contact with someone with COVID-19 (the date of last close contact is considered day 0).

### **Who should quarantine?**

If you come into close contact with someone with COVID-19, you should quarantine if you are not [up to date](#) on COVID-19 vaccines. This includes people who are not vaccinated.

### **What to do for quarantine**

- Stay home and away from other people for at least 5 days (day 0 through day 5) after your last contact with a person who has COVID-19. The date of your exposure is considered day 0. Wear a [well-fitting mask](#) when around others at home, if possible.
- For 10 days after your last close contact with someone with COVID-19, watch for fever (100.4°F or greater), cough, shortness of breath, or other [COVID-19 symptoms](#).

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- If you develop symptoms, [get tested](#) immediately and isolate until you receive your test results. If you test positive, follow [isolation](#) recommendations.
- If you do not develop symptoms, [get tested](#) at least 5 days after you last had close contact with someone with COVID-19.
  - If you test negative, you can leave your home, but continue to wear a [well-fitting mask](#) when around others at home and in public until 10 days after your last close contact with someone with COVID-19.
  - If you test positive, you should isolate for at least 5 days from the date of your positive test (if you do not have symptoms). If you do develop [COVID-19 symptoms](#), isolate for at least 5 days from the date your symptoms began (the date the symptoms started is day 0). Follow recommendations in the [isolation](#) section below.
  - If you are unable to get a test 5 days after last close contact with someone with COVID-19, you can leave your home after day 5 if you have been without [COVID-19 symptoms](#) throughout the 5-day period. Wear a [well-fitting mask](#) for 10 days after your date of last close contact when around others at home and in public.
  - Avoid people who are [immunocompromised or at high risk for severe disease](#), and nursing homes and other high-risk settings, until after at least 10 days.
- If possible, stay away from people you live with, especially people who are at [higher risk](#) for getting very sick from COVID-19, as well as others outside your home throughout the full 10 days after your last close contact with someone with COVID-19.
- If you are unable to quarantine, you should wear a [well-fitting mask](#) for 10 days when around others at home and in public.
- If you are unable to wear a mask when around others, you should continue to quarantine for 10 days. Avoid people who are [immunocompromised or at high risk for severe disease](#), and nursing homes and other high-risk settings, until after at least 10 days.
- See additional information [about travel](#).
- Do not go to places where you are unable to wear a mask, such as restaurants and some gyms, and avoid eating around others at home and at work until after 10 days after your last close contact with someone with COVID-19.

#### **After quarantine**

- Watch for symptoms until 10 days after your last close contact with someone with COVID-19.
- If you have symptoms, isolate immediately and [get tested](#).

#### **Quarantine in high-risk congregate settings**

In certain congregate settings that have high risk of secondary transmission (such as correctional and detention facilities, homeless shelters, or cruise ships), CDC recommends a 10-day quarantine for residents, regardless of vaccination and booster status. During periods of critical staffing shortages, facilities may consider shortening the quarantine period for staff to ensure continuity of operations. Decisions to shorten quarantine in these settings should be made in consultation with state, local, tribal, or territorial health departments and should take into

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

Veterans ID (ICN):

### ***Emergency Documentation***

consideration the context and characteristics of the facility. CDC's [setting-specific guidance](#) provides additional recommendations for these settings.

## **Isolation**

**Isolation** is used to separate people with confirmed or suspected COVID-19 from those without COVID-19. People who are in isolation should stay home until it's safe for them to be around others. At home, anyone sick or infected should separate from others, or wear a [well-fitting mask](#) when they need to be around others. People in isolation should stay in a specific "sick room" or area and use a separate bathroom if available. Everyone who has presumed or confirmed COVID-19 should stay home and isolate from other people for at least 5 full days (day 0 is the first day of symptoms or the date of the day of the positive viral test for asymptomatic persons). They should wear a mask when around others at home and in public for an additional 5 days. People who are confirmed to have COVID-19 or are showing symptoms of COVID-19 need to isolate regardless of their vaccination status. This includes:

- People who have a [positive viral test](#) for COVID-19, regardless of whether or not they have [symptoms](#).
- People with [symptoms](#) of COVID-19, including people who are awaiting test results or have not been tested. People with symptoms should isolate even if they do not know if they have been in close contact with someone with COVID-19.

## **What to do for isolation**

- Monitor your [symptoms](#). If you have an [emergency warning sign](#) (including trouble breathing), seek emergency medical care immediately.
- Stay in a separate room from other household members, if possible.
- Use a separate bathroom, if possible.
- Take steps to [improve ventilation at home](#), if possible.
- Avoid contact with other members of the household and pets.
- Don't share personal household items, like cups, towels, and utensils.
- Wear a [well-fitting mask](#) when you need to be around other people.

Learn more about [what to do if you are sick](#) and [how to notify your contacts](#).

## **Ending isolation for people who had COVID-19 and had symptoms**

If you had COVID-19 and had [symptoms](#), isolate for at least 5 days. To calculate your 5-day isolation period, day 0 is your first day of symptoms. Day 1 is the first full day after your symptoms developed. You can leave isolation after 5 full days.

- You can end isolation after 5 full days if you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved (Loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation).

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- You should continue to wear a [well-fitting mask](#) around others at home and in public for 5 additional days (day 6 through day 10) after the end of your 5-day isolation period. If you are unable to wear a mask when around others, you should continue to isolate for a full 10 days. Avoid people who are [immunocompromised or at high risk for severe disease](#), and nursing homes and other high-risk settings, until after at least 10 days.
- If you continue to have fever or your other symptoms have not improved after 5 days of isolation, you should wait to end your isolation until you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved. Continue to wear a [well-fitting mask](#). Contact your healthcare provider if you have questions.
- See additional information [about travel](#).
- Do not go to places where you are unable to wear a mask, such as restaurants and some gyms, and avoid eating around others at home and at work until a full 10 days after your first day of symptoms.

If an individual has access to a test and wants to test, the best approach is to use an [antigen test](#)<sup>1</sup> towards the end of the 5-day isolation period. Collect the test sample only if you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved (loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation). If your test result is positive, you should continue to isolate until day 10. If your test result is negative, you can end isolation, but continue to wear a [well-fitting mask](#) around others at home and in public until day 10. Follow additional recommendations for masking and [avoiding travel](#) as described above.

<sup>1</sup>As noted in the [labeling for authorized over-the counter antigen tests](#): Negative results should be treated as presumptive. Negative results do not rule out SARS-CoV-2 infection and should not be used as the sole basis for treatment or patient management decisions, including infection control decisions. To improve results, antigen tests should be used twice over a three-day period with at least 24 hours and no more than 48 hours between tests.

Note that these recommendations on ending isolation **do not** apply to people with moderate or severe COVID-19 or with weakened immune systems (immunocompromised). See section below for recommendations for when to end isolation for these groups.

### **Ending isolation for people who tested positive for COVID-19 but had no symptoms**

If you test positive for COVID-19 and never develop [symptoms](#), isolate for at least 5 days. Day 0 is the day of your positive viral test (based on the date you were tested) and day 1 is the first full day after the specimen was collected for your positive test. You can leave isolation after 5 full days.

- If you continue to have no symptoms, you can end isolation after at least 5 days.
- You should continue to wear a [well-fitting mask](#) around others at home and in public until day 10 (day 6 through day 10). If you are unable to wear a mask when around others, you should continue to isolate for 10 days. Avoid people who are [immunocompromised or at high risk for severe disease](#), and nursing homes and other high-risk settings, until after at least 10 days.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- If you develop [symptoms](#) after testing positive, your 5-day isolation period should start over. Day 0 is your first day of symptoms. Follow the recommendations above for [ending isolation for people who had COVID-19 and had symptoms](#).
- See additional information [about travel](#).
- Do not go to places where you are unable to wear a mask, such as restaurants and some gyms, and avoid eating around others at home and at work until 10 days after the day of your positive test.

If an individual has access to a test and wants to test, the best approach is to use an [antigen test](#)<sup>1</sup> towards the end of the 5-day isolation period. If your test result is positive, you should continue to isolate until day 10. If your test result is negative, you can end isolation, but continue to wear a [well-fitting mask](#) around others at home and in public until day 10. Follow additional recommendations for masking and avoiding travel as described above.

<sup>1</sup>As noted in the [labeling for authorized over-the counter antigen tests](#): Negative results should be treated as presumptive. Negative results do not rule out SARS-CoV-2 infection and should not be used as the sole basis for treatment or patient management decisions, including infection control decisions. To improve results, antigen tests should be used twice over a three-day period with at least 24 hours and no more than 48 hours between tests.

### **Ending isolation for people who were severely ill with COVID-19 or have a weakened immune system (immunocompromised)**

People who are severely ill with COVID-19 (including those who were hospitalized or required intensive care or ventilation support) and people with [compromised immune systems](#) might need to isolate at home longer. They may also require testing with a [viral test](#) to determine when they can be around others. CDC recommends an isolation period of at least 10 and up to 20 days for people who were severely ill with COVID-19 and for [people with weakened immune systems](#). Consult with your healthcare provider about when you can resume being around other people.

People who are immunocompromised should talk to their healthcare provider about the potential for reduced immune responses to COVID-19 vaccines and the need to continue to follow [current prevention measures](#) (including wearing a [well-fitting mask](#), [staying 6 feet apart from others](#) they don't live with, and avoiding crowds and poorly ventilated indoor spaces) to protect themselves against COVID-19 until advised otherwise by their healthcare provider. Close contacts of immunocompromised people—including household members—should also be encouraged to receive all [recommended COVID-19 vaccine doses](#) to help protect these people.

### **Isolation in high-risk congregate settings**

In certain high-risk congregate settings that have high risk of secondary transmission and where it is not feasible to cohort people (such as correctional and detention facilities, homeless shelters, and cruise ships), CDC recommends a 10-day isolation period for residents. During periods of critical staffing shortages, facilities may consider shortening the isolation period for staff to ensure continuity of operations. Decisions to shorten isolation in these settings should be made in consultation with state, local, tribal, or territorial health departments and should take into consideration the context and characteristics of the facility. CDC's [setting-specific guidance](#) provides additional recommendations for these settings.

### **Ongoing COVID-19 exposure FAQs**

#### **I live with someone with COVID-19, but I cannot be separated from them. How do we manage quarantine in this situation?**

It is very important for people with COVID-19 to remain apart from other people, if possible, even if they are living together. If separation of the person with COVID-19 from others that they live with is not possible, the other people that they live with will have ongoing exposure, meaning they will be repeatedly exposed until that person is no longer able to spread the virus to other people. In this situation, there are precautions you can take to limit the spread of COVID-19:

- The person with COVID-19 and everyone they live with should wear a [well-fitting mask](#) inside the home.
- If possible, one person should care for the person with COVID-19 to limit the number of people who are in [close contact](#) with the infected person.
- Take steps to [protect yourself and others](#) to reduce transmission in the home:
  - **Quarantine** if you are not up to date with your COVID-19 vaccines.
  - **Isolate** if you are sick or tested positive for COVID-19, even if you don't have symptoms.
  - **Learn more about the public health recommendations** for testing, mask use and quarantine of close contacts, like yourself, who have ongoing exposure. These recommendations differ depending on your vaccination status.

#### **What should I do if I have ongoing exposure to COVID-19 from someone I live with?**

Recommendations for this situation depend on your vaccination status:

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

If you are not [up to date](#) on COVID-19 vaccines and have ongoing exposure to COVID-19, you should:

- Begin [quarantine](#) immediately and continue to quarantine throughout the isolation period of the person with COVID-19.
- Continue to quarantine for an additional 5 days starting the day after the end of isolation for the person with COVID-19.
- Get tested at least 5 days after the end of isolation of the infected person that lives with them.
  - If you test negative, you can leave the home but should continue to wear a well-fitting mask when around others at home and in public until 10 days after the end of isolation for the person with COVID-19.
- [Isolate](#) immediately if you develop [symptoms](#) of COVID-19 or test positive.

If you are [up to date](#) with COVID-19 vaccines and have ongoing exposure to COVID-19, you should:

- Get tested at least 5 days after your first exposure. A person with COVID-19 is considered infectious starting 2 days before they develop symptoms, or 2 days before the date of their positive test if they do not have symptoms.
- Get tested again at least 5 days after the end of isolation for the person with COVID-19.
- Wear a [well-fitting mask](#) when you are around the person with COVID-19, and do this throughout their isolation period.
- Wear a [well-fitting mask](#) around others for 10 days after the infected person's isolation period ends.

[Isolate](#) immediately if you develop [symptoms](#) of COVID-19 or test positive.

### **What should I do if multiple people I live with test positive for COVID-19 at different times?**

Recommendations for this situation depend on your vaccination status:

- **If you are not up to date with your COVID-19 vaccines**, you should:
  - [Quarantine](#) throughout the isolation period of any infected person that you live with.
  - Continue to quarantine until 5 days after the end of isolation date for the most recently infected person that lives with you. For example, if the last day of isolation of the person most recently infected with COVID-19 was June 30, the new 5-day quarantine period starts on July 1.
  - Get tested at least 5 days after the end of isolation for the most recently infected person that lives with you.
  - Wear a [well-fitting mask](#) when you are around any person with COVID-19 while that person is in isolation.
  - Wear a [well-fitting mask](#) when you are around other people until 10 days after your last close contact.
  - [Isolate](#) immediately if you develop [symptoms of COVID-19](#) or test positive.
- If you are [up to date](#) with COVID-19 your vaccines , you should:

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Get tested at least 5 days after your first exposure. A person with COVID-19 is considered infectious starting 2 days before they developed symptoms, or 2 days before the date of their positive test if they do not have symptoms.
- Get tested again at least 5 days after the end of isolation for the most recently infected person that lives with you.
- Wear a [well-fitting mask](#) when you are around any person with COVID-19 while that person is in isolation.
- Wear a [well-fitting mask](#) around others for 10 days after the end of isolation for the most recently infected person that lives with you. For example, if the last day of isolation for the person most recently infected with COVID-19 was June 30, the new 10-day period to wear a well-fitting mask indoors in public starts on July 1.
- [Isolate](#) immediately if you develop [symptoms](#) of COVID-19 or test positive.

#### **I had COVID-19 and completed isolation. Do I have to quarantine or get tested if someone I live with gets COVID-19 shortly after I completed isolation?**

No. If you recently completed isolation and someone that lives with you tests positive for the virus that causes COVID-19 shortly after the end of your isolation period, you do not have to quarantine or get tested as long as you do not develop new symptoms. Once all of the people that live together have completed isolation or quarantine, refer to the guidance below for new exposures to COVID-19.

- If you had COVID-19 in the previous 90 days and then came into [close contact](#) with someone with COVID-19, you do not have to quarantine or get tested if you do not have symptoms. But you should:
  - Wear a [well-fitting mask](#) indoors in public for 10 days after exposure.
  - Monitor for [COVID-19 symptoms](#) and [isolate](#) immediately if symptoms develop.
  - Consult with a healthcare provider for testing recommendations if new symptoms develop.
- If more than 90 days have passed since your recovery from infection, follow CDC's [recommendations](#) for close contacts. These recommendations will differ depending on your vaccination status.

## **COVID-19 Frequently Asked Questions**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

COVID-19 (coronavirus disease) is an infection that is caused by a large family of viruses. Some viruses cause illness in people and others cause illness in animals like camels, cats, and bats. In some cases, the viruses that cause illness in animals can spread to humans.

### **Where did the coronavirus come from?**

In December 2019, China told the World Health Organization (WHO) of several cases of lung disease (human respiratory illness). These cases were linked to an open seafood and livestock market in the city of Wuhan. The link to the seafood and livestock market suggests that the virus may have spread from animals to humans. However, since that first outbreak in December, the virus has also been shown to spread from person to person.

### **What is the name of the disease and the virus?**

#### **Disease name**

Early on, this disease was called novel coronavirus. This is because scientists determined that the disease was caused by a new (novel) respiratory virus. The World Health Organization (WHO) has now named the disease COVID-19, or coronavirus disease.

#### **Virus name**

The virus that causes the disease is called severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).

#### **More information on disease and virus naming**

World Health Organization (WHO):

[www.who.int/emergencies/diseases/novel-coronavirus-2019/technical-guidance/naming-the-coronavirus-disease-\(covid-2019\)-and-the-virus-that-causes-it](http://www.who.int/emergencies/diseases/novel-coronavirus-2019/technical-guidance/naming-the-coronavirus-disease-(covid-2019)-and-the-virus-that-causes-it)

### **Who is at risk for complications from coronavirus disease?**

Some people may be at higher risk for complications from coronavirus disease. This includes older adults and people who have chronic diseases, such as heart disease, diabetes, and lung disease.

If you are at higher risk for complications, take these extra precautions:

- Avoid close contact with people who are sick or have a fever or cough. Stay at least 3–6 ft (1–2 m) away from them, if possible.
- Wash your hands often with soap and water for at least 20 seconds.
- Avoid touching your face, mouth, nose, or eyes.
- Keep supplies on hand at home, such as food, medicine, and cleaning supplies.
- Stay home as much as possible.
- Avoid social gatherings and travel.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

## **How does coronavirus disease spread?**

The virus that causes coronavirus disease spreads easily from person to person (is contagious). There are also cases of community-spread disease. This means the disease has spread to:

- People who have no known contact with other infected people.
- People who have not traveled to areas where there are known cases.

It appears to spread from one person to another through droplets from coughing or sneezing.

## **Can I get the virus from touching surfaces or objects?**

There is still a lot that we do not know about the virus that causes coronavirus disease. Scientists are basing a lot of information on what they know about similar viruses, such as:

- Viruses cannot generally survive on surfaces for long. They need a human body (host) to survive.
- It is more likely that the virus is spread by close contact with people who are sick (direct contact), such as through:
  - Shaking hands or hugging.
  - Breathing in respiratory droplets that travel through the air. This can happen when an infected person coughs or sneezes on or near other people.
- It is less likely that the virus is spread when a person touches a surface or object that has the virus on it (indirect contact). The virus may be able to enter the body if the person touches a surface or object and then touches his or her face, eyes, nose, or mouth.

## **Can a person spread the virus without having symptoms of the disease?**

It may be possible for the virus to spread before a person has symptoms of the disease, but this is most likely not the main way the virus is spreading. It is more likely for the virus to spread by being in close contact with people who are sick and breathing in the respiratory droplets of a sick person's cough or sneeze.

## **What are the symptoms of coronavirus disease?**

Symptoms vary from person to person and can range from mild to severe. Symptoms may include:

- Fever.
- Cough.
- Tiredness, weakness, or fatigue.
- Fast breathing or feeling short of breath.

These symptoms can appear anywhere from 2 to 14 days after you have been exposed to the virus. If you develop symptoms, call your health care provider. People with severe symptoms may need hospital care.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

#### **If I am exposed to the virus, how long does it take before symptoms start?**

Symptoms of coronavirus disease may appear anywhere from 2 to 14 days after a person has been exposed to the virus. If you develop symptoms, call your health care provider.

#### **Should I be tested for this virus?**

Your health care provider will decide whether to test you based on your symptoms, history of exposure, and your risk factors.

#### **How does a health care provider test for this virus?**

Health care providers will collect samples to send for testing. Samples may include:

- Taking a swab of fluid from the nose.
- Taking fluid from the lungs by having you cough up mucus (sputum) into a sterile cup.
- Taking a blood sample.
- Taking a stool or urine sample.

#### **Is there a treatment or vaccine for this virus?**

Currently, there is no vaccine to prevent coronavirus disease. Also, there are no medicines like antibiotics or antivirals to treat the virus. A person who becomes sick is given supportive care, which means rest and fluids. A person may also relieve his or her symptoms by using over-the-counter medicines that treat sneezing, coughing, and runny nose. These are the same medicines that a person takes for the common cold.

If you develop symptoms, call your health care provider. People with severe symptoms may need hospital care.

#### **What can I do to protect myself and my family from this virus?**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

You can protect yourself and your family by taking the same actions that you would take to prevent the spread of other viruses. Take the following actions:

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, use alcohol-based hand sanitizer.
- Avoid touching your face, mouth, nose, or eyes.
- Cough or sneeze into a tissue, sleeve, or elbow. **Do not** cough or sneeze into your hand or the air.
  - If you cough or sneeze into a tissue, throw it away immediately and wash your hands.
- Disinfect objects and surfaces that you frequently touch every day.
- Avoid close contact with people who are sick or have a fever or cough. Stay at least 3–6 ft (1–2 m) away from them, if possible.
- Stay home if you are sick, except to get medical care. Call your health care provider **before** you get medical care.
- Make sure your vaccines are up to date. Ask your health care provider what vaccines you need.

### **What should I do if I need to travel?**

Follow travel recommendations from your local health authority, the CDC, and WHO.

#### **Travel information and advice**

- Centers for Disease Control and Prevention (CDC):  
[www.cdc.gov/coronavirus/2019-ncov/travelers/index.html](http://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html)
- World Health Organization (WHO):  
[www.who.int/emergencies/diseases/novel-coronavirus-2019/travel-advice](http://www.who.int/emergencies/diseases/novel-coronavirus-2019/travel-advice)

#### **Know the risks and take action to protect your health**

- You are at higher risk of getting coronavirus disease if you are traveling to areas with an outbreak or if you are exposed to travelers from areas with an outbreak.
- Wash your hands often and practice good hygiene to lower the risk of catching or spreading the virus.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

## **What should I do if I am sick?**

### **General instructions to stop the spread of infection**

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, use alcohol-based hand sanitizer.
- Cough or sneeze into a tissue, sleeve, or elbow. **Do not** cough or sneeze into your hand or the air.
- If you cough or sneeze into a tissue, throw it away immediately and wash your hands.
- Stay home unless you must get medical care. Call your health care provider or local health authority **before** you get medical care.
- Avoid public areas. **Do not** take public transportation, if possible.
- If you can, wear a mask if you must go out of the house or if you are in close contact with someone who is not sick.

### **Keep your home clean**

- Disinfect objects and surfaces that are frequently touched every day. This may include:
  - Counters and tables.
  - Doorknobs and light switches.
  - Sinks and faucets.
  - Electronics such as phones, remote controls, keyboards, computers, and tablets.
- Wash dishes in hot, soapy water or use a dishwasher. Air-dry your dishes.
- Wash laundry in hot water.

### **Prevent infecting other household members**

- Let healthy household members care for children and pets, if possible. If you have to care for children or pets, wash your hands often and wear a mask.
- Sleep in a different bedroom or bed, if possible.
- **Do not** share personal items, such as razors, toothbrushes, deodorant, combs, brushes, towels, and washcloths.

## **Where to find more information**

### **Centers for Disease Control and Prevention (CDC)**

- Coronavirus health topic: [www.who.int/health-topics/coronavirus](http://www.who.int/health-topics/coronavirus)
- Questions and answers on COVID-19: [www.who.int/news-room/q-a-detail/q-a-coronaviruses](http://www.who.int/news-room/q-a-detail/q-a-coronaviruses)

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Global tracker: [who.sprinklr.com](http://who.sprinklr.com)

#### **American Academy of Pediatrics (AAP)**

- Information for families:  
[www.healthychildren.org/English/health-issues/conditions/chest-lungs/Pages/2019-Novel-Coronavirus.aspx](http://www.healthychildren.org/English/health-issues/conditions/chest-lungs/Pages/2019-Novel-Coronavirus.aspx)

The coronavirus situation is changing rapidly. Check your local health authority website or the CDC and WHO websites for updates and news.

#### **When should I contact a health care provider?**

- Contact your health care provider if you have symptoms of an infection, such as fever or cough, and you:
  - Have been near anyone who is known to have coronavirus disease.
  - Have come into contact with a person who is suspected to have coronavirus disease.
  - Have traveled outside of the country.

#### **When should I get emergency medical care?**

- Get help right away by calling your local emergency services (911 in the U.S.) if you have:
  - Trouble breathing.
  - Pain or pressure in your chest.
  - Confusion.
  - Blue-tinged lips and fingernails.
  - Difficulty waking from sleep.
  - Symptoms that get worse.

Let the emergency medical personnel know if you think you have coronavirus disease.

#### **Summary**

- A new respiratory virus is spreading from person to person and causing COVID-19 (coronavirus disease).
- The virus that causes COVID-19 appears to spread easily. It spreads from one person to another through droplets from coughing or sneezing.
- Older adults and those with chronic diseases are at higher risk of disease. If you are at higher risk for complications, take extra precautions.
- There is currently no vaccine to prevent coronavirus disease. There are no medicines, such as antibiotics or antivirals, to treat the virus.
- You can protect yourself and your family by washing your hands often, avoiding touching your face, and covering your coughs and sneezes.

# **10 Things You Can Do to Manage Your COVID-19 Symptoms at Home**

## **If you have possible or confirmed COVID-19**

1. **Stay home** except to get medical care.
2. **Monitor your symptoms** carefully. If your symptoms get worse, call your healthcare provider immediately.
3. **Get rest and stay hydrated.**
4. If you have a medical appointment, **call the healthcare provider** ahead of time and tell them that you have or may have COVID-19.
5. For medical emergencies, call 911 and **notify the dispatch personnel** that you have or may have COVID-19.
6. **Cover your cough and sneezes** with a tissue or use the inside of your elbow.
7. **Wash your hands often** with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.
8. As much as possible, **stay in a specific room and away from other people** in your home. Also, you should use a separate bathroom, if available. If you need to be around other people in or outside of the home, wear a mask.
9. **Avoid sharing personal items** with other people in your household, like dishes, towels, and bedding.
10. **Clean all surfaces** that are touched often, like counters, tabletops, and doorknobs. Use household cleaning sprays or wipes according to the label instructions.

### ***Emergency Documentation***

Please return to the emergency department for worsening pain, heavy vaginal bleeding, greater than 1 pad per hour or multiple pads per hour or any bleeding associated with feeling dizzy like you to pass out chest pain or shortness of breath, also return for passing large clots or tissue. Please follow-up with OB/GYN they should call you to schedule appointment if you have not heard anything in a few days please call them.

#### **Patient Education Materials:**

Threatened Miscarriage

## **Threatened Miscarriage**

A threatened miscarriage occurs when a woman has vaginal bleeding during the first 20 weeks of pregnancy but the pregnancy has not ended. If vaginal bleeding occurs during this time, the health care provider will do tests to make sure the woman is still pregnant. The woman's condition may be considered a threatened miscarriage if the tests show:

- That she is still pregnant.
- That the embryo or unborn baby (fetus) inside the uterus is still growing.

A threatened miscarriage does not mean your pregnancy will end, but it does increase the risk of losing your pregnancy (miscarriage).

### **What are the causes?**

The cause of this condition is usually not known.

### **What increases the risk?**

The following factors may make a pregnant woman more likely to have a miscarriage:

#### **Certain medical conditions**

- Conditions that affect the hormone balance in the body, such as thyroid disease or polycystic ovary syndrome.
- Diabetes.
- Autoimmune disorders.
- Infections.
- Bleeding disorders.
- Obesity.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

### **Lifestyle factors**

- Using products with tobacco or nicotine or being exposed to tobacco smoke.
- Having alcohol.
- Having large amounts of caffeine.
- Recreational drug use.

### **Problems with reproductive organs or structures**

- Cervical insufficiency. This is when the lowest part of the uterus (cervix) opens and thins before pregnancy is at term.
- Having a condition called Asherman syndrome, which causes scarring in the uterus or causes the uterus to be abnormal in structure.
- Fibrous growths, called fibroids, in the uterus.
- Congenital abnormalities. These problems are present at birth.
- Infection of the cervix or uterus.

### **Personal or medical history**

- Injury (trauma).
- Having had a miscarriage before.
- Being younger than age 18 or older than age 35.
- Exposure to harmful substances in the environment. This may include radiation or heavy metals, such as lead.
- Using certain medicines.

### **What are the signs or symptoms?**

Symptoms of this condition include:

- Vaginal bleeding or spotting, with or without cramps or pain.
- Mild pain or cramps in your abdomen.

### **How is this diagnosed?**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

### ***Emergency Documentation***

You may have tests to check whether you are still pregnant. These tests will be done if you have bleeding, with or without pain, in your abdomen before the 20th week of pregnancy. These tests include:

- Ultrasound.
- A physical exam.
- Measurement of your baby's heart rate.
- Lab tests, such as blood tests, urine tests, or swabs for infection.

You may be diagnosed with a threatened miscarriage if:

- Ultrasound testing shows that you are still pregnant.
- Your baby's heart rate is strong.
- A physical exam shows that your cervix is closed.
- Blood tests confirm that you are still pregnant.

### **How is this treated?**

No treatments have been shown to prevent a threatened miscarriage from going on to a complete miscarriage. However, the right home care is important.

### **Follow these instructions at home:**

- Get plenty of rest.
- **Do not** have sex, douche, or put anything in your vagina, such as tampons, until your health care provider says it is okay.
- **Do not** smoke or use recreational drugs.
- **Do not** drink alcohol.
- Avoid caffeine.
- Keep all follow-up prenatal visits. This is important.

### **Contact a health care provider if:**

- You have light vaginal bleeding or spotting while pregnant.
- You have pain or cramping in your abdomen.
- You have a fever.

### **Get help right away if:**

- Heavy bleeding soaks through 2 large sanitary pads an hour for more than 2 hours.
- Blood clots come out of your vagina.
- Tissue comes out of your vagina.
- You leak fluid, or you have a gush of fluid from your vagina.

### ***Emergency Documentation***

- You have severe low back pain or cramps in your abdomen.
- You have a fever, chills, and severe pain in the abdomen.

## **Summary**

- A threatened miscarriage occurs when a woman bleeds from the vagina during the first 20 weeks of pregnancy but the pregnancy has not ended.
- The cause of a threatened miscarriage is usually not known.
- Symptoms of this condition may include vaginal bleeding and mild pain or cramps in your abdomen.
- No treatments have been shown to prevent a threatened miscarriage from going on to a complete miscarriage.
- Keep all follow-up prenatal visits. This is important.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

**With:**

**Address:**

**When:**

KEEFE, PATRICIA ANNE,  
MD

**Comments:**

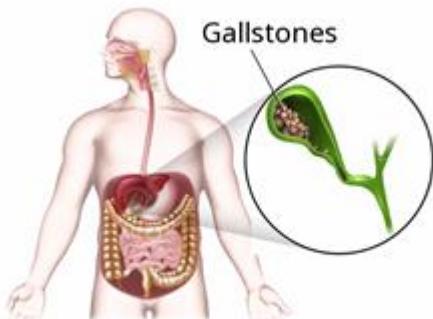

Call for appointment

Take Bentyl as described. Return to ED if you have any fever, nausea, vomiting or any other emergent concerns. Otherwise continue to follow-up with surgery. They will call you for an appointment.

**Patient Education Materials:**

Cholelithiasis

## **Cholelithiasis**

Cholelithiasis is a disease in which gallstones form in the gallbladder. The gallbladder is an organ that stores bile. Bile is a fluid that helps to digest fats. Gallstones begin as small crystals and can slowly grow into stones. They may cause no symptoms until they block the gallbladder duct, or cystic duct, when the gallbladder tightens (contracts) after food is eaten. This can cause pain and is known as a gallbladder attack, or biliary colic.

There are two main types of gallstones:

- Cholesterol stones. These are the most common type of gallstone. These stones are made of hardened cholesterol and are usually yellow-green in color. Cholesterol is a fat-like substance that is made in the liver.
- Pigment stones. These are dark in color and are made of a red-yellow substance, called bilirubin, that forms when hemoglobin from red blood cells breaks down.

Patient Name: **Amieva, Yessenia**

Veterans ID (ICN):

### ***Emergency Documentation***

## **What are the causes?**

This condition may be caused by an imbalance in the different parts that make bile. This can happen if the bile:

- Has too much bilirubin. This can happen in certain blood diseases, such as sickle cell anemia.
- Has too much cholesterol.
- Does not have enough bile salts. These salts help the body absorb and digest fats.

In some cases, this condition can also be caused by the gallbladder not emptying completely or often enough. This is common during pregnancy.

## **What increases the risk?**

The following factors may make you more likely to develop this condition:

- Being female.
- Having multiple pregnancies. Health care providers sometimes advise removing diseased gallbladders before future pregnancies.
- Eating a diet that is heavy in fried foods, fat, and refined carbohydrates, such as white bread and white rice.
- Being obese.
- Being older than age 40.
- Using medicines that contain female hormones (estrogen) for a long time.
- Losing weight quickly.
- Having a family history of gallstones.
- Having certain medical problems, such as:
  - Diabetes mellitus.
  - Cystic fibrosis.
  - Crohn's disease.
  - Cirrhosis or other long-term (chronic) liver disease.
  - Certain blood diseases, such as sickle cell anemia or leukemia.

## **What are the signs or symptoms?**

In many cases, having gallstones causes no symptoms. When you have gallstones but do not have symptoms, you have silent gallstones. If a gallstone blocks your bile duct, it can cause a gallbladder attack. The main symptom of a gallbladder attack is sudden pain in the upper right part of the abdomen. The pain:

- Usually comes at night or after eating.
- Can last for one hour or more.
- Can spread to your right shoulder, back, or chest.
- Can feel like indigestion. This is discomfort, burning, or fullness in your upper abdomen.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

If the bile duct is blocked for more than a few hours, it can cause an infection or inflammation of your gallbladder (cholecystitis), liver, or pancreas. This can cause:

- Nausea or vomiting.
- Bloating.
- Pain in your abdomen that lasts for 5 hours or longer.
- Tenderness in your upper abdomen, often in the upper right section and under your rib cage.
- Fever or chills.
- Skin or the white parts of your eyes turning yellow (jaundice). This usually happens when a stone has blocked bile from passing through the common bile duct.
- Dark urine or light-colored stools.

### **How is this diagnosed?**

This condition may be diagnosed based on:

- A physical exam.
- Your medical history.
- Ultrasound.
- CT scan.
- MRI.

You may also have other tests, including:

- Blood tests to check for signs of an infection or inflammation.
- Cholescintigraphy, or HIDA scan. This is a scan of your gallbladder and bile ducts (biliary system) using non-harmful radioactive material and special cameras that can see the radioactive material.
- Endoscopic retrograde cholangiopancreatogram. This involves inserting a small tube with a camera on the end (endoscope) through your mouth to look at bile ducts and check for blockages.

### **How is this treated?**

Treatment for this condition depends on the severity of the condition. Silent gallstones do not need treatment. Treatment may be needed if a blockage causes a gallbladder attack or other symptoms. Treatment may include:

- Home care, if symptoms are not severe.
  - During a simple gallbladder attack, stop eating and drinking for 12–24 hours (except for water and clear liquids). This helps to "cool down" your gallbladder. After 1 or 2 days, you can start to eat a diet of simple or clear foods, such as broths and crackers.
  - You may also need medicines for pain or nausea or both.
  - If you have cholecystitis and an infection, you will need antibiotics.
- A hospital stay, if needed for pain control or for cholecystitis with severe infection.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Cholecystectomy, or surgery to remove your gallbladder. This is the most common treatment if all other treatments have not worked.
- Medicines to break up gallstones. These are most effective at treating small gallstones. Medicines may be used for up to 6–12 months.
- Endoscopic retrograde cholangiopancreatogram. A small basket can be attached to the endoscope and used to capture and remove gallstones, mainly those that are in the common bile duct.

## **Follow these instructions at home:**

### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed an antibiotic medicine, take it as told by your health care provider. **Do not** stop taking the antibiotic even if you start to feel better.
- Ask your health care provider if the medicine prescribed to you requires you to avoid driving or using machinery.

### **Eating and drinking**

- Drink enough fluid to keep your urine pale yellow. This is important during a gallbladder attack. Water and clear liquids are preferred.
- Follow a healthy diet. This includes:
  - Reducing fatty foods, such as fried food and foods high in cholesterol.
  - Reducing refined carbohydrates, such as white bread and white rice.
  - Eating more fiber. Aim for foods such as almonds, fruit, and beans.

### **Alcohol use**

- If you drink alcohol:
  - Limit how much you use to:
    - 0–1 drink a day for nonpregnant women.
    - 0–2 drinks a day for men.
  - Be aware of how much alcohol is in your drink. In the U.S., one drink equals one 12 oz bottle of beer (355 mL), one 5 oz glass of wine (148 mL), or one 1½ oz glass of hard liquor (44 mL).

### **General instructions**

- **Do not** use any products that contain nicotine or tobacco, such as cigarettes, e-cigarettes, and chewing tobacco. If you need help quitting, ask your health care provider.
- Maintain a healthy weight.
- Keep all follow-up visits as told by your health care provider. These may include consultations with a surgeon or specialist. This is important.

### ***Emergency Documentation***

#### **Where to find more information**

- National Institute of Diabetes and Digestive and Kidney Diseases: [www.niddk.nih.gov](http://www.niddk.nih.gov)

#### **Contact a health care provider if:**

- You think you have had a gallbladder attack.
- You have been diagnosed with silent gallstones and you develop pain in your abdomen or indigestion.
- You begin to have attacks more often.
- You have dark urine or light-colored stools.

#### **Get help right away if:**

- You have pain from a gallbladder attack that lasts for more than 2 hours.
- You have pain in your abdomen that lasts for more than 5 hours or is getting worse.
- You have a fever or chills.
- You have nausea and vomiting that do not go away.
- You develop jaundice.

#### **Summary**

- Cholelithiasis is a disease in which gallstones form in the gallbladder.
- This condition may be caused by an imbalance in the different parts that make bile. This can happen if your bile has too much bilirubin or cholesterol, or does not have enough bile salts.
- Treatment for gallstones depends on the severity of the condition. Silent gallstones do not need treatment.
- If gallstones cause a gallbladder attack or other symptoms, treatment usually involves not eating or drinking anything. Treatment may also include pain medicines and antibiotics, and it sometimes includes a hospital stay.
- Surgery to remove the gallbladder is common if all other treatments have not worked.

Obstetrics and Gynecology

## **Miscarriage**

A miscarriage is the loss of pregnancy before the 20th week. Most miscarriages happen during the first 3 months of pregnancy. Sometimes, a miscarriage can happen before a woman knows that she is pregnant.

Having a miscarriage can be an emotional experience. If you have had a miscarriage, talk with your health care provider about any questions you may have about the loss of your baby, the grieving process, and your plans for future pregnancy.

### **What are the causes?**

Many times, the cause of a miscarriage is not known.

### **What increases the risk?**

The following factors may make a pregnant woman more likely to have a miscarriage:

#### **Certain medical conditions**

- Conditions that affect the hormone balance in the body, such as thyroid disease or polycystic ovary syndrome.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Diabetes.
- Autoimmune disorders.
- Infections.
- Bleeding disorders.
- Obesity.

#### **Lifestyle factors**

- Using products with tobacco or nicotine in them or being exposed to tobacco smoke.
- Having alcohol.
- Having large amounts of caffeine.
- Recreational drug use.

#### **Problems with reproductive organs or structures**

- Cervical insufficiency. This is when the lowest part of the uterus (cervix) opens and thins before pregnancy is at term.
- Having a condition called Asherman syndrome. This syndrome causes scarring in the uterus or causes the uterus to be abnormal in structure.
- Fibrous growths, called fibroids, in the uterus.
- Congenital abnormalities. These problems are present at birth.
- Infection of the cervix or uterus.

#### **Personal or medical history**

- Injury (trauma).
- Having had a miscarriage before.
- Being younger than age 18 or older than age 35.
- Exposure to harmful substances in the environment. This may include radiation or heavy metals, such as lead.
- Use of certain medicines.

#### **What are the signs or symptoms?**

Symptoms of this condition include:

- Vaginal bleeding or spotting, with or without cramps or pain.
- Pain or cramping in the abdomen or lower back.
- Fluid or tissue coming out of the vagina.

#### **How is this diagnosed?**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

This condition may be diagnosed based on:

- A physical exam.
- Ultrasound.
- Lab tests, such as blood tests, urine tests, or swabs for infection.

### **How is this treated?**

Treatment for a miscarriage is sometimes not needed if all the pregnancy tissue that was in the uterus comes out on its own, and there are no other problems such as infection or heavy bleeding.

In other cases, this condition may be treated with:

- Dilation and curettage (D&C). In this procedure, the cervix is stretched open and any remaining pregnancy tissue is removed from the lining of the uterus (endometrium).
- Medicines. These may include:
  - Antibiotic medicine, to treat infection.
  - Medicine to help any remaining pregnancy tissue come out of the body.
  - Medicine to reduce (contract) the size of the uterus. These medicines may be given if there is a lot of bleeding.

If you have Rh-negative blood, you may be given an injection of a medicine called Rho(D) immune globulin. This medicine helps prevent problems with future pregnancies.

### **Follow these instructions at home:**

#### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed antibiotic medicine, take it as told by your health care provider. **Do not** stop taking the antibiotic even if you start to feel better.

#### **Activity**

- Rest as told by your health care provider. Ask your health care provider what activities are safe for you.
- Have someone help with home and family responsibilities during this time.

#### **General instructions**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Monitor how much tissue or blood clot material comes out of the vagina.
- **Do not** have sex, douche, or put anything, such as tampons, in your vagina until your health care provider says it is okay.
- To help you and your partner with the grieving process, talk with your health care provider or get counseling.
- When you are ready, meet with your health care provider to discuss any important steps you should take for your health. Also, discuss steps you should take to have a healthy pregnancy in the future.
- Keep all follow-up visits. This is important.

### **Where to find more information**

- The American College of Obstetricians and Gynecologists: [acog.org](http://acog.org)
- U.S. Department of Health and Human Services Office of Women's Health: [hrsa.gov/office-womens-health](http://hrsa.gov/office-womens-health)

### **Contact a health care provider if:**

- You have a fever or chills.
- There is bad-smelling fluid coming from the vagina.
- You have more bleeding instead of less.
- Tissue or blood clots come out of your vagina.

### **Get help right away if:**

- You have severe cramps or pain in your back or abdomen.
- Heavy bleeding soaks through 2 large sanitary pads an hour for more than 2 hours.
- You become light-headed or weak.
- You faint.
- You feel sad, and your sadness takes over your thoughts.
- You think about hurting yourself.

**If you ever feel like you may hurt yourself or others, or have thoughts about taking your own life, get help right away. Go to your nearest emergency department or:**

- **Call your local emergency services (911 in the U.S.).**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Call a suicide crisis helpline, such as the National Suicide Prevention Lifeline at 1-800-273-8255. This is open 24 hours a day in the U.S.
- Text the Crisis Text Line at 741741 (in the U.S.).

### **Summary**

- Most miscarriages happen in the first 3 months of pregnancy. Sometimes miscarriage happens before a woman knows that she is pregnant.
- Follow instructions from your health care provider about medicines and activity.
- To help you and your partner with grieving, talk with your health care provider or get counseling.
- Keep all follow-up visits.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

## **Managing Pregnancy Loss**

Pregnancy loss can happen any time during a pregnancy. Often the cause is not known. It is rarely because of anything you did. Pregnancy loss in early pregnancy (during the first trimester) is called a miscarriage. This type of pregnancy loss is the most common. Pregnancy loss that happens after 20 weeks of pregnancy is called fetal demise if the baby's heart stops beating before birth. Fetal demise is much less common. Some women experience spontaneous labor shortly after fetal demise resulting in a stillborn birth (stillbirth).

Any pregnancy loss can be devastating. You will need to recover both physically and emotionally. Most women are able to get pregnant again after a pregnancy loss and deliver a healthy baby.

### **How to manage emotional recovery**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

Pregnancy loss is very hard emotionally. You may feel many different emotions while you grieve. You may feel sad and angry. You may also feel guilty. It is normal to have periods of crying. Emotional recovery can take longer than physical recovery. It is different for everyone.

Taking these steps can help you in managing this loss:

- Remember that it is unlikely you did anything to cause the pregnancy loss.
- Share your thoughts and feelings with friends, family, and your partner. Remember that your partner is also recovering emotionally.
- Make sure you have a good support system. **Do not** spend too much time alone.
- Meet with a pregnancy loss counselor or join a pregnancy loss support group.
- Get enough sleep and eat a healthy diet. Return to regular exercise when you have recovered physically.
- **Do not** use drugs or alcohol to manage your emotions.
- Consider seeing a mental health professional to help you recover emotionally.
- Ask a friend or loved one to help you decide what to do with any clothing and nursery items you received for your baby.

In the case of a stillbirth, many women benefit from taking additional steps in the grieving process. You may want to:

- Hold your baby after the birth.
- Name your baby.
- Request a birth certificate.
- Create a keepsake such as handprints or footprints.
- Dress your baby and have a picture taken.
- Make funeral arrangements.
- Ask for a baptism or blessing.

Hospitals have staff members who can help you with all these arrangements.

### **How to recognize emotional stress**

It is normal to have emotional stress after a pregnancy loss. But emotional stress that lasts a long time or becomes severe requires treatment. Watch out for these signs of severe emotional stress:

- Sadness, anger, or guilt that is not going away and is interfering with your normal activities.
- Relationship problems that have occurred or gotten worse since the pregnancy loss.
- Signs of depression that last longer than 2 weeks. These may include:
  - Sadness.
  - Anxiety.
  - Hopelessness.
  - Loss of interest in activities you enjoy.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Inability to concentrate.
- Trouble sleeping or sleeping too much.
- Loss of appetite or overeating.
- Thoughts of death or of hurting yourself.

#### **Follow these instructions at home:**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- Rest at home until your energy level returns. Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- When you are ready, meet with your health care provider to discuss steps to take for a future pregnancy.
- Keep all follow-up visits as told by your health care provider. This is important.

#### **Where to find support**

- To help you and your partner with the process of grieving, talk with your health care provider or seek counseling.
- Consider meeting with others who have experienced pregnancy loss. Ask your health care provider about support groups and resources.

#### **Where to find more information**

- U.S. Department of Health and Human Services Office on Women's Health: [www.womenshealth.gov](http://www.womenshealth.gov)
- American Pregnancy Association: [www.americanpregnancy.org](http://www.americanpregnancy.org)

#### **Contact a health care provider if:**

- You continue to experience grief, sadness, or lack of motivation for everyday activities, and those feelings do not improve over time.
- You are struggling to recover emotionally, especially if you are using alcohol or substances to help.

#### **Get help right away if:**

- You have thoughts of hurting yourself or others.

**If you ever feel like you may hurt yourself or others, or have thoughts about taking your own life, get help right away. You can go to your nearest emergency department or call:**

- **Your local emergency services (911 in the U.S.).**
- **A suicide crisis helpline, such as the National Suicide Prevention Lifeline at 1-800-273-8255. This is open 24 hours a day.**

Infectious Disease

## **COVID-19: What to Do if You Are Sick**

CDC has updated [isolation and quarantine](#) recommendations for the public, and is revising the CDC website to reflect these changes. These recommendations do not apply to [healthcare personnel](#) and do not supersede state, local, tribal, or territorial laws, rules, and regulations.

If you have a fever, cough or [other symptoms](#), you might have COVID-19. Most people have mild illness and are able to recover at home. If you are sick:

- Keep track of your symptoms.
- If you have [an emergency warning sign](#) (including trouble breathing), call 911.

### **Steps to help prevent the spread of COVID-19 if you are sick**

[If you are sick with COVID-19 or think you might have COVID-19](#), follow the steps below to care for yourself and to help protect other people in your home and community.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

### **Stay home except to get medical care**

- **Stay home.** Most people with COVID-19 have mild illness and can recover at home without medical care. Do not leave your home, except to get medical care. Do not visit public areas.
- **Take care of yourself.** Get rest and stay hydrated. Take over-the-counter medicines, such as acetaminophen, to help you feel better.
- **Stay in touch with your doctor.** Call before you get medical care. Be sure to get care if you have trouble breathing, or have any other [emergency warning signs](#), or if you think it is an [emergency](#).
- **Avoid public transportation,** ride-sharing, or taxis.

### **Separate yourself from other people**

**As much as possible, stay in a specific room** and away from other people and pets in your home. If possible, you should use a separate bathroom. If you need to be around other people or animals in or outside of the home, wear a mask.

**Tell your [close contacts](#)** that they may have been exposed to COVID-19. An infected person can spread COVID-19 starting 48 hours (or 2 days) before the person has any symptoms or tests positive. By letting your close contacts know they may have been exposed to COVID-19, you are helping to protect everyone.

- Additional guidance is available for those living in [close quarters](#) and [shared housing](#).
- See [COVID-19 and Animals](#) if you have questions about pets.
- If you are diagnosed with COVID-19, someone from the health department may call you. [Answer the call](#) to slow the spread.

### **Monitor your symptoms**

- **[Symptoms](#) of COVID-19 include fever, cough, or other symptoms.**
- **Follow care instructions from your healthcare provider and local health department.** Your local health authorities may give instructions on checking your symptoms and reporting information.

### **When to seek emergency medical attention**

Look for **emergency warning signs\*** for COVID-19. If someone is showing any of these signs, **seek emergency medical care immediately**:

- Trouble breathing
- Persistent pain or pressure in the chest
- New confusion
- Inability to wake or stay awake
- Pale, gray, or blue-colored skin, lips, or nail beds, depending on skin tone

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

\*This list is not all possible symptoms. Please call your medical provider for any other symptoms that are severe or concerning to you.

**Call 911 or call ahead to your local emergency facility:** Notify the operator that you are seeking care for someone who has or may have COVID-19.

### **Call ahead before visiting your doctor**

- **Call ahead.** Many medical visits for routine care are being postponed or done by phone or telemedicine.
- **If you have a medical appointment that cannot be postponed, call your doctor's office,** and tell them you have or may have COVID-19. This will help the office protect themselves and other patients.

### **Get**

- If you have [symptoms of COVID-19](#), get [tested](#). While waiting for [test results](#), you stay away from others, including staying apart from those living in your household.
- [Self-tests](#) are one of several options for [testing for the virus that causes COVID-19](#) and may be more convenient than laboratory-based tests and point-of-care tests. Ask your healthcare provider or your local health department if you need help interpreting your test results.
- You can visit your [state](#), [tribal](#), [local](#), and [territorial health department's website](#) to look for the latest local information on testing sites.

### **If you are sick, wear a mask over your nose and mouth**

- **You should wear a [mask](#) over your nose and mouth** if you must be around other people or animals, including pets (even at home).
- You don't need to wear the mask if you are alone. If you can't put on a mask (because of trouble breathing, for example), cover your coughs and sneezes in some other way. Try to stay at least 6 feet away from other people. This will help protect the people around you.
- Masks should not be placed on young children under age 2 years, anyone who has trouble breathing, or anyone who is not able to remove the mask without help.

**Note:** During the COVID-19 pandemic, medical grade facemasks are reserved for healthcare workers and some first responders.

### **Cover your coughs and sneezes**

- **Cover your mouth and nose** with a tissue when you cough or sneeze.
- **Throw away used tissues** in a lined trash can.
- **Immediately wash your hands** with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.

### **Clean your hands often**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- **Wash your hands** often with soap and water for at least 20 seconds. This is especially important after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.
- **Use hand sanitizer** if soap and water are not available. Use an alcohol-based hand sanitizer with at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry.
- **Soap and water** are the best option, especially if hands are visibly dirty.
- **Avoid touching** your eyes, nose, and mouth with unwashed hands.
- [Handwashing Tips](#)

### **Avoid sharing personal household items**

- **Do not share** dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people in your home.
- **Wash these items thoroughly after using them** with soap and water or put in the dishwasher.

### **Clean all "high-touch" surfaces every day**

- **Clean and disinfect** high-touch surfaces in your "sick room" and bathroom; wear disposable gloves. Let someone else clean and disinfect surfaces in common areas, but you should clean your bedroom and bathroom, if possible.
- **If a caregiver or other person needs to clean and disinfect** a sick person's bedroom or bathroom, they should do so on an as-needed basis. The caregiver/other person should wear a mask and disposable gloves prior to cleaning. They should wait as long as possible after the person who is sick has used the bathroom before coming in to clean and use the bathroom.
  - High-touch surfaces include phones, remote controls, counters, tabletops, doorknobs, bathroom fixtures, toilets, keyboards, tablets, and bedside tables.
- **Clean and disinfect areas that may have blood, stool, or body fluids on them.**
- **Use household cleaners and disinfectants.** Clean the area or item with soap and water or another detergent if it is dirty. Then, use a household disinfectant.
  - Be sure to follow the instructions on the label to ensure safe and effective use of the product. Many products recommend keeping the surface wet for several minutes to ensure germs are killed. Many also recommend precautions such as wearing gloves and making sure you have good ventilation during use of the product.
  - Use a product from [EPA's List N: Disinfectants for Coronavirus \(COVID-19\)](#).
  - [Complete Disinfection Guidance](#)

### **When you can be around others after being sick with COVID-19**

Deciding when you can be around others is different for different situations. Find out when you can [safely end home isolation](#).

**For any additional questions about your care,** contact your healthcare provider or state or local health department.

Nutrition

# **Dehydration, Adult**

Dehydration is a condition in which there is not enough water or other fluids in the body. This happens when a person loses more fluids than he or she takes in. Important organs, such as the kidneys, brain, and heart, cannot function without a proper amount of fluids. Any loss of fluids from the body can lead to dehydration.

Dehydration can be mild, moderate, or severe. It should be treated right away to prevent it from becoming severe.

## **What are the causes?**

Dehydration may be caused by:

- Conditions that cause loss of water or other fluids, such as diarrhea, vomiting, or sweating or urinating a lot.
- Not drinking enough fluids, especially when you are ill or doing activities that require a lot of energy.
- Other illnesses and conditions, such as fever or infection.
- Certain medicines, such as medicines that remove excess fluid from the body (diuretics).
- Lack of safe drinking water.
- Not being able to get enough water and food.

## **What increases the risk?**

The following factors may make you more likely to develop this condition:

- Having a long-term (chronic) illness that has not been treated properly, such as diabetes, heart disease, or kidney disease.
- Being 65 years of age or older.
- Having a disability.
- Living in a place that is high in altitude, where thinner, drier air causes more fluid loss.
- Doing exercises that put stress on your body for a long time (endurance sports).

## **What are the signs or symptoms?**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

Symptoms of dehydration depend on how severe it is.

### **Mild or moderate dehydration**

- Thirst.
- Dry lips or dry mouth.
- Dizziness or light-headedness, especially when standing up from a seated position.
- Muscle cramps.
- Dark urine. Urine may be the color of tea.
- Less urine or tears produced than usual.
- Headache.

### **Severe dehydration**

- Changes in skin. Your skin may be cold and clammy, blotchy, or pale. Your skin also may not return to normal after being lightly pinched and released.
- Little or no tears, urine, or sweat.
- Changes in vital signs, such as rapid breathing and low blood pressure. Your pulse may be weak or may be faster than 100 beats a minute when you are sitting still.
- Other changes, such as:
  - Feeling very thirsty.
  - Sunken eyes.
  - Cold hands and feet.
  - Confusion.
  - Being very tired (lethargic) or having trouble waking from sleep.
  - Short-term weight loss.
  - Loss of consciousness.

### **How is this diagnosed?**

This condition is diagnosed based on your symptoms and a physical exam. You may have blood and urine tests to help confirm the diagnosis.

### **How is this treated?**

Treatment for this condition depends on how severe it is. Treatment should be started right away. **Do not** wait until dehydration becomes severe. Severe dehydration is an emergency and needs to be treated in a hospital.

- Mild or moderate dehydration can be treated at home. You may be asked to:
  - Drink more fluids.
  - Drink an oral rehydration solution (ORS). This drink helps restore proper amounts of fluids and salts and minerals in the blood (electrolytes).

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Severe dehydration can be treated:
  - With IV fluids.
  - By correcting abnormal levels of electrolytes. This is often done by giving electrolytes through a tube that is passed through your nose and into your stomach (nasogastric tube, or NG tube).
  - By treating the underlying cause of dehydration.

### **Follow these instructions at home:**

#### **Oral rehydration solution**

If told by your health care provider, drink an ORS:

- Make an ORS by following instructions on the package.
- Start by drinking small amounts, about  $\frac{1}{2}$  cup (120 mL) every 5–10 minutes.
- Slowly increase how much you drink until you have taken the amount recommended by your health care provider.

#### **Eating and drinking**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Drink enough clear fluid to keep your urine pale yellow. If you were told to drink an ORS, finish the ORS first and then start slowly drinking other clear fluids. Drink fluids such as:
  - Water. **Do not** drink only water. Doing that can lead to hyponatremia, which is having too little salt (sodium) in the body.
  - Water from ice chips you suck on.
  - Fruit juice that you have added water to (diluted fruit juice).
  - Low-calorie sports drinks.
- Eat foods that contain a healthy balance of electrolytes, such as bananas, oranges, potatoes, tomatoes, and spinach.
- **Do not** drink alcohol.
- Avoid the following:
  - Drinks that contain a lot of sugar. These include high-calorie sports drinks, fruit juice that is not diluted, and soda.
  - Caffeine.
  - Foods that are greasy or contain a lot of fat or sugar.

### **General instructions**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- **Do not** take sodium tablets. Doing that can lead to having too much sodium in the body (hypernatremia).
- Return to your normal activities as told by your health care provider. Ask your health care provider what activities are safe for you.
- Keep all follow-up visits as told by your health care provider. This is important.

### **Contact a health care provider if:**

- You have muscle cramps, pain, or discomfort, such as:
  - Pain in your abdomen and the pain gets worse or stays in one area (localizes).
  - Stiff neck.
- You have a rash.
- You are more irritable than usual.
- You are sleepier or have a harder time waking than usual.
- You feel weak or dizzy.
- You feel very thirsty.

### **Get help right away if you have:**

- Any symptoms of severe dehydration.
- Symptoms of vomiting, such as:
  - You cannot eat or drink without vomiting.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Vomiting gets worse or does not go away.
- Vomit includes blood or green matter (bile).
- Symptoms that get worse with treatment.
- A fever.
- A severe headache.
- Problems with urination or bowel movements, such as:
  - Diarrhea that gets worse or does not go away.
  - Blood in your stool (feces). This may cause stool to look black and tarry.
  - Not urinating, or urinating only a small amount of very dark urine, within 6–8 hours.
- Trouble breathing.

**These symptoms may represent a serious problem that is an emergency. Do not wait to see if the symptoms will go away. Get medical help right away. Call your local emergency services (911 in the U.S.). Do not drive yourself to the hospital.**

### **Summary**

- Dehydration is a condition in which there is not enough water or other fluids in the body. This happens when a person loses more fluids than he or she takes in.
- Treatment for this condition depends on how severe it is. Treatment should be started right away. **Do not** wait until dehydration becomes severe.
- Drink enough clear fluid to keep your urine pale yellow. If you were told to drink an oral rehydration solution (ORS), finish the ORS first and then start slowly drinking other clear fluids.
- Take over-the-counter and prescription medicines only as told by your health care provider.
- Get help right away if you have any symptoms of severe dehydration.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

## **Second Trimester of Pregnancy**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

The second trimester of pregnancy is from week 13 through week 27. This is months 4 through 6 of pregnancy. The second trimester is often a time when you feel your best. Your body has adjusted to being pregnant, and you begin to feel better physically.

During the second trimester:

- Morning sickness has lessened or stopped completely.
- You may have more energy.
- You may have an increase in appetite.

The second trimester is also a time when the unborn baby (fetus) is growing rapidly. At the end of the sixth month, the fetus may be up to 12 inches long and weigh about 1½ pounds. You will likely begin to feel the baby move (quintching) between 16 and 20 weeks of pregnancy.

### **Body changes during your second trimester**

Your body continues to go through many changes during your second trimester. The changes vary and generally return to normal after the baby is born.

#### **Physical changes**

- Your weight will continue to increase. You will notice your lower abdomen bulging out.
- You may begin to get stretch marks on your hips, abdomen, and breasts.
- Your breasts will continue to grow and to become tender.
- Dark spots or blotches (chloasma or mask of pregnancy) may develop on your face.
- A dark line from your belly button to the pubic area (linea nigra) may appear.
- You may have changes in your hair. These can include thickening of your hair, rapid growth, and changes in texture. Some people also have hair loss during or after pregnancy, or hair that feels dry or thin.

#### **Health changes**

- You may develop headaches.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- You may have heartburn.
- You may develop constipation.
- You may develop hemorrhoids or swollen, bulging veins (varicose veins).
- Your gums may bleed and may be sensitive to brushing and flossing.
- You may urinate more often because the fetus is pressing on your bladder.
- You may have back pain. This is caused by:
  - Weight gain.
  - Pregnancy hormones that are relaxing the joints in your pelvis.
  - A shift in weight and the muscles that support your balance.

### **Follow these instructions at home:**

#### **Medicines**

- Follow your health care provider's instructions regarding medicine use. Specific medicines may be either safe or unsafe to take during pregnancy. **Do not** take any medicines unless approved by your health care provider.
- Take a prenatal vitamin that contains at least 600 micrograms (mcg) of folic acid.

#### **Eating and drinking**

- Eat a healthy diet that includes fresh fruits and vegetables, whole grains, good sources of protein such as meat, eggs, or tofu, and low-fat dairy products.
- Avoid raw meat and unpasteurized juice, milk, and cheese. These carry germs that can harm you and your baby.
- You may need to take these actions to prevent or treat constipation:
  - Drink enough fluid to keep your urine pale yellow.
  - Eat foods that are high in fiber, such as beans, whole grains, and fresh fruits and vegetables.
  - Limit foods that are high in fat and processed sugars, such as fried or sweet foods.

#### **Activity**

- Exercise only as directed by your health care provider. Most people can continue their usual exercise routine during pregnancy. Try to exercise for 30 minutes at least 5 days a week. Stop exercising if you develop contractions in your uterus.
- Stop exercising if you develop pain or cramping in the lower abdomen or lower back.
- Avoid exercising if it is very hot or humid or if you are at a high altitude.
- Avoid heavy lifting.
- If you choose to, you may have sex unless your health care provider tells you not to.

#### **Relieving pain and discomfort**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Wear a supportive bra to prevent discomfort from breast tenderness.
- Take warm sitz baths to soothe any pain or discomfort caused by hemorrhoids. Use hemorrhoid cream if your health care provider approves.
- Rest with your legs raised (elevated) if you have leg cramps or low back pain.
- If you develop varicose veins:
  - Wear support hose as told by your health care provider.
  - Elevate your feet for 15 minutes, 3–4 times a day.
  - Limit salt in your diet.

### **Safety**

- Wear your seat belt at all times when driving or riding in a car.
- Talk with your health care provider if someone is verbally or physically abusive to you.

### **Lifestyle**

- **Do not** use hot tubs, steam rooms, or saunas.
- **Do not** douche. **Do not** use tampons or scented sanitary pads.
- Avoid cat litter boxes and soil used by cats. These carry germs that can cause birth defects in the baby and possibly loss of the fetus by miscarriage or stillbirth.
- **Do not** use herbal remedies, alcohol, illegal drugs, or medicines that are not approved by your health care provider. Chemicals in these products can harm your baby.
- **Do not** use any products that contain nicotine or tobacco, such as cigarettes, e-cigarettes, and chewing tobacco. If you need help quitting, ask your health care provider.

### **General instructions**

- During a routine prenatal visit, your health care provider will do a physical exam and other tests. He or she will also discuss your overall health. Keep all follow-up visits. This is important.
- Ask your health care provider for a referral to a local prenatal education class.
- Ask for help if you have counseling or nutritional needs during pregnancy. Your health care provider can offer advice or refer you to specialists for help with various needs.

### **Where to find more information**

- American Pregnancy Association: [americanpregnancy.org](http://americanpregnancy.org)
- American College of Obstetricians and Gynecologists: [acog.org/en/Womens%20Health/Pregnancy](http://acog.org/en/Womens%20Health/Pregnancy)

### **Contact a health care provider if you have:**

- A headache that does not go away when you take medicine.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Vision changes or you see spots in front of your eyes.
- Mild pelvic cramps, pelvic pressure, or nagging pain in the abdominal area.
- Persistent nausea, vomiting, or diarrhea.
- A bad-smelling vaginal discharge or foul-smelling urine.
- Pain when you urinate.
- Sudden or extreme swelling of your face, hands, ankles, feet, or legs.
- A fever.

### **Get help right away if you:**

- Have fluid leaking from your vagina.
- Have spotting or bleeding from your vagina.
- Have severe abdominal cramping or pain.
- Have difficulty breathing.
- Have chest pain.
- Have fainting spells.
- Have not felt your baby move for the time period told by your health care provider.
- Have new or increased pain, swelling, or redness in an arm or leg.

### **Summary**

- The second trimester of pregnancy is from week 13 through week 27 (months 4 through 6).
- **Do not** use herbal remedies, alcohol, illegal drugs, or medicines that are not approved by your health care provider. Chemicals in these products can harm your baby.
- Exercise only as directed by your health care provider. Most people can continue their usual exercise routine during pregnancy.
- Keep all follow-up visits. This is important.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

## **Warning Signs During Pregnancy**

During pregnancy, your body goes through many changes. Some changes may be uncomfortable, but most do not represent a serious problem. However, it is important to learn when certain signs and symptoms may indicate a problem. Talk with your health care provider about your current health and any medical conditions you have. Make sure you know the symptoms to watch for and report.

### **How does this affect me?**

#### **Warning signs during pregnancy**

Let your health care provider know if you have any of the following warning signs:

- Dizziness or feeling faint.
- Nausea, vomiting, or diarrhea that lasts 24 hours or longer.
- Spotting or bleeding from your vagina.
- Abdominal cramping or pain in your pelvis or lower back.
- Shortness of breath, difficulty breathing, or chest pain.
- New or increased pain, swelling, or redness in an arm or leg.
- Your baby is moving less than usual or is not moving.

You should also watch for signs of a serious medical condition called preeclampsia. This may include:

- A severe, throbbing headache that does not go away.
- Vision changes, such as blurred or double vision, light sensitivity, or seeing spots in front of your eyes.
- Sudden or extreme swelling of your face, hands, legs, or feet.

Pregnancy causes changes that may make it more likely for you to get an infection. Let your health care provider know if you have signs of infection, such as:

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- A fever.
- A bad-smelling vaginal discharge.
- Pain or burning when you urinate.

### **How does this affect my baby?**

Throughout your pregnancy, always report any of the warning signs of a problem to your health care provider. This can help prevent complications that may affect your baby, including:

- Increased risk for premature birth.
- Infection that may be transmitted to your baby.
- Increased risk for stillbirth.

### **Follow these instructions at home:**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- Keep all follow-up visits. This is important.

### **Where to find more information**

- Office on Women's Health: [womenshealth.gov/pregnancy/](https://womenshealth.gov/pregnancy/)
- American College of Obstetricians and Gynecologists: [acog.org/womens-health/pregnancy](https://acog.org/womens-health/pregnancy)

### **Contact a health care provider if:**

- You have any warning signs of problems during your pregnancy.
- Any of the following apply to you during your pregnancy:
  - You have strong emotions, such as sadness or anxiety, that interfere with work or personal relationships.
  - You feel unsafe in your home.
  - You are using tobacco products, alcohol, or drugs, and you need help to stop.

### **Get help right away if:**

- You have signs or symptoms of labor before 37 weeks of pregnancy. These include:
  - Contractions that are 5 minutes or less apart, or that increase in frequency, intensity, or length.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Sudden, sharp abdominal pain or low back pain.
- Uncontrolled gush or trickle of fluid from your vagina.

## **Summary**

- Always report any warning signs to your health care provider to prevent complications that may affect both you and your baby.
- Talk with your health care provider about your current health and any medical conditions you have. Make sure you know the symptoms to watch for and report.
- Keep all follow-up visits. This is important.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Elsevier Patient Education © 2022 Elsevier Inc.

# **Activity Restriction During Pregnancy**

Your health care provider may recommend specific activity restrictions during pregnancy for a variety of reasons. Activity restriction may require that you limit activities that require great effort, such as exercise, lifting, or sex.

The type of activity restriction will vary for each person, depending on your risk or the problems you are having. Activity restriction may be recommended for a period of time until your baby is delivered.

## **Why are activity restrictions recommended?**

Activity restriction may be recommended if:

- Your placenta is partially or completely covering the opening of your cervix (placenta previa).
- There is bleeding between the wall of the uterus and the amniotic sac in the first trimester of pregnancy (subchorionic hemorrhage).
- You went into labor too early (preterm labor).
- You have a history of miscarriage.
- You have a condition that causes high blood pressure during pregnancy (preeclampsia or eclampsia).
- You are pregnant with more than one baby.
- Your baby is not growing well.

## **What are the risks?**

The risks depend on your specific restriction. Strict bed rest has the most physical and emotional risks and is no longer routinely recommended. Risks of strict bed rest include:

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Loss of muscle conditioning from not moving.
- Blood clots.
- Social isolation.
- Depression.
- Loss of income.

Talk with your health care team about activity restriction to decide if it is best for you and your baby. Even if you are having problems during your pregnancy, you may be able to continue with normal levels of activity with careful monitoring by your health care team.

### **Follow these instructions at home:**

If needed, based on your overall health and the health of your baby, your health care provider will decide which type of activity restriction is right for you. Activity restrictions may include:

- Not lifting anything heavier than 10 pounds (4.5 kg).
- Avoiding activities that take a lot of physical effort.
- No lifting or straining.
- Resting in a sitting position or lying down for periods of time during the day.

**Pelvic rest** may be recommended along with activity restrictions. If pelvic rest is recommended, then:

- **Do not** have sex, an orgasm, or use sexual stimulation.
- **Do not** use tampons. **Do not** douche. **Do not** put anything into your vagina.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg).
- Avoid activities that require a lot of effort.
- Avoid any activity in which your pelvic muscles could become strained, such as squatting.

### **Questions to ask your health care provider**

- Why is my activity being limited?
- How will activity restrictions affect my body?
- Why is rest helpful for me and my baby?
- What activities can I do?

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- When can I return to normal activities?

## **When should I seek immediate medical care?**

Seek immediate medical care if you have:

- Vaginal bleeding.
- Vaginal discharge.
- Cramping pain in your lower abdomen.
- Regular contractions.
- A low, dull backache.

## **Summary**

- Your health care provider may recommend specific activity restrictions during pregnancy for a variety of reasons.
- Activity restriction may require that you limit activities such as exercise, lifting, sex, or any other activity that requires great effort.
- Discuss the risks and benefits of activity restriction with your health care team to decide if it is best for you and your baby.
- Contact your health care provider right away if you think you are having contractions, or if you notice vaginal bleeding, discharge, or cramping.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

# **Vaginal Bleeding During Pregnancy, Second Trimester**

A small amount of bleeding from the vagina, or spotting, is common during early pregnancy. Some bleeding may be related to the pregnancy, and some may not. In many cases, the bleeding is normal and is not a problem. However, bleeding can also be a sign of something serious.

Normal things may cause bleeding during the second trimester. They include:

- Rapid changes in blood vessels. This is caused by changes that are happening to the body during pregnancy.
- Sex.
- Pelvic exams.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

Abnormal things that may cause bleeding during the second trimester include:

- Infection, inflammation, or growths on the cervix. The growths on the cervix are also called polyps.
- A condition in which the placenta partially or completely covers the opening of the cervix (placenta previa).
- The placenta separating from the uterus (placenta abruption).
- Miscarriage.
- Early labor, also called preterm labor.
- The cervix opening and thinning before pregnancy is at term and before labor starts (cervical insufficiency).
- A mass of tissue developing in the uterus due to an egg being fertilized incorrectly (molar pregnancy).

Tell your health care provider about any vaginal bleeding right away.

### **Follow these instructions at home:**

#### **Monitoring your bleeding**

Monitor your bleeding.

- Pay attention to any changes in your symptoms. Let your health care provider know about any concerns.
- Try to understand when the bleeding occurs. Does the bleeding start on its own, or does it start after something is done, such as sex or a pelvic exam?
- Use a diary to record the things you see about your bleeding, including:
  - The kind of bleeding you are having. Does the bleeding start and stop irregularly, or is it a constant flow?
  - The severity of your bleeding. Is the bleeding heavy or light?
  - The number of pads you use each day, how often you change them, and how soaked they are.
- Tell your health care provider if you pass tissue. He or she may want to see it.

### **Activity**

- Follow instructions from your health care provider about limiting your activity. Ask what activities are safe for you.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- **Do not** exercise or do activities that take a lot of effort unless your health care provider approves.
- **Do not** have sex until your health care provider says that this is safe.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told, until your health care provider says that it is safe.
- If needed, make plans for someone to help with your regular activities.

### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- **Do not** take aspirin because it can cause bleeding.

### **General instructions**

- **Do not** use tampons or douche.
- Keep all follow-up visits. This is important.

### **Contact a health care provider if:**

- You have vaginal bleeding during any time of your pregnancy.
- You have cramps or labor pains.
- You have a fever that does not get better when you take medicines.

### **Get help right away if:**

- You have severe cramps in your back or abdomen.
- You have contractions.
- You have chills.
- Your bleeding increases or you pass large clots or a large amount of tissue from your vagina.
- You feel light-headed or weak, or you faint.
- You are leaking fluid or have a gush of fluid from your vagina.

### **Summary**

- A small amount of bleeding, or spotting, from the vagina is common during early pregnancy.
- Many things can cause vaginal bleeding during pregnancy. Tell your health care provider about any bleeding right away.

### ***Emergency Documentation***

#### **Contact a health care provider if:**

- You have vaginal bleeding during any time of your pregnancy.
- You have cramps or labor pains.
- You have a fever that does not get better when you take medicines.

#### **Get help right away if:**

- You have severe cramps in your back or abdomen.
- You have contractions.
- You have chills.
- Your bleeding increases or you pass large clots or a large amount of tissue from your vagina.
- You feel light-headed or weak, or you faint.
- You are leaking fluid or have a gush of fluid from your vagina.

#### **Summary**

- A small amount of bleeding, or spotting, from the vagina is common during early pregnancy.
- Many things can cause vaginal bleeding during pregnancy. Tell your health care provider about any bleeding right away.
- Try to understand when bleeding occurs. Does bleeding occur on its own, or does it occur after something is done, such as sex or pelvic exams?
- Follow instructions from your health care provider about limiting your activity. Ask what activities are safe for you.
- Keep all follow-up visits. This is important.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

## **Subchorionic Hematoma**

Patient Name: **Amieva, Yessenia**

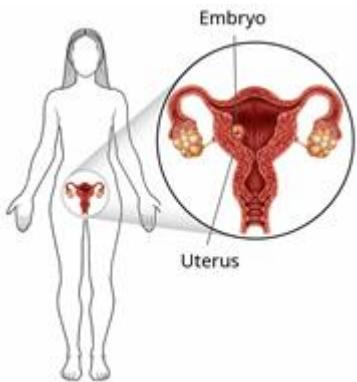

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

A hematoma is a collection of blood outside of the blood vessels. A subchorionic hematoma is a collection of blood between the outer wall of the embryo (chorion) and the inner wall of the uterus.

This condition can cause vaginal bleeding. Early small hematomas usually shrink on their own and do not affect your baby or pregnancy. When bleeding starts later in pregnancy, or if the hematoma is larger or occurs in older pregnant women, the condition may be more serious. Larger hematomas increase the chances of miscarriage. This condition also increases the risk of:

- Premature separation of the placenta from the uterus.
- Premature (preterm) labor.
- Stillbirth.

### **What are the causes?**

The exact cause of this condition is not known. It occurs when blood is trapped between the placenta and the uterine wall because the placenta has separated from the original site of implantation.

### **What increases the risk?**

You are more likely to develop this condition if:

- You were treated with fertility medicines.
- You became pregnant through in vitro fertilization (IVF).

### **What are the signs or symptoms?**

Symptoms of this condition include:

- Vaginal spotting or bleeding.
- Abdominal pain. This is rare.

Sometimes you may have no symptoms and the bleeding may only be seen when ultrasound images are taken (transvaginal ultrasound).

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

### **How is this diagnosed?**

This condition is diagnosed based on a physical exam. This includes a pelvic exam. You may also have other tests, including:

- Blood tests.
- Urine tests.
- Ultrasound of the abdomen.

### **How is this treated?**

Treatment for this condition can vary. Treatment may include:

- Watchful waiting. You will be monitored closely for any changes in bleeding.
- Medicines.
- Activity restriction. This may be needed until the bleeding stops.
- A medicine called Rh immunoglobulin. This is given if you have an Rh-negative blood type. It prevents Rh sensitization.

### **Follow these instructions at home:**

- Stay on bed rest if told to do so by your health care provider.
- **Do not** lift anything that is heavier than 10 lb (4.5 kg), or the limit that you are told by your health care provider.
- Track and write down the number of pads you use each day and how soaked (saturated) they are.
- **Do not** use tampons.
- Keep all follow-up visits. This is important. Your health care provider may ask you to have follow-up blood tests or ultrasound tests or both.

### **Contact a health care provider if:**

- You have any vaginal bleeding.
- You have a fever.

### **Get help right away if:**

- You have severe cramps in your stomach, back, abdomen, or pelvis.
- You pass large clots or tissue. Save any tissue for your health care provider to look at.
- You faint.
- You become light-headed or weak.

### **Summary**

#### **ED/UC Patient Education Note**

## **COVID-19 Frequently Asked Questions**

COVID-19 (coronavirus disease) is an infection that is caused by a large family of viruses. Some viruses cause illness in people and others cause illness in animals like camels, cats, and bats. In some cases, the viruses that cause illness in animals can spread to humans.

### **Where did the coronavirus come from?**

In December 2019, China told the World Health Organization (WHO) of several cases of lung disease (human respiratory illness). These cases were linked to an open seafood and livestock market in the city of Wuhan. The link to the seafood and livestock market suggests that the virus may have spread from animals to humans. However, since that first outbreak in December, the virus has also been shown to spread from person to person.

### **What is the name of the disease and the virus?**

#### **Disease name**

Early on, this disease was called novel coronavirus. This is because scientists determined that the disease was caused by a new (novel) respiratory virus. The World Health Organization (WHO) has now named the disease COVID-19, or coronavirus disease.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

### **Virus name**

The virus that causes the disease is called severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2).

### **More information on disease and virus naming**

World Health Organization (WHO):

[www.who.int/emergencies/diseases/novel-coronavirus-2019/technical-guidance/naming-the-coronavirus-disease-\(covid-2019\)-and-the-virus-that-causes-it](http://www.who.int/emergencies/diseases/novel-coronavirus-2019/technical-guidance/naming-the-coronavirus-disease-(covid-2019)-and-the-virus-that-causes-it)

### **Who is at risk for complications from coronavirus disease?**

Some people may be at higher risk for complications from coronavirus disease. This includes older adults and people who have chronic diseases, such as heart disease, diabetes, and lung disease.

If you are at higher risk for complications, take these extra precautions:

- Avoid close contact with people who are sick or have a fever or cough. Stay at least 3–6 ft (1–2 m) away from them, if possible.
- Wash your hands often with soap and water for at least 20 seconds.
- Avoid touching your face, mouth, nose, or eyes.
- Keep supplies on hand at home, such as food, medicine, and cleaning supplies.
- Stay home as much as possible.
- Avoid social gatherings and travel.

### **How does coronavirus disease spread?**

The virus that causes coronavirus disease spreads easily from person to person (is contagious). There are also cases of community-spread disease. This means the disease has spread to:

- People who have no known contact with other infected people.
- People who have not traveled to areas where there are known cases.

It appears to spread from one person to another through droplets from coughing or sneezing.

### **Can I get the virus from touching surfaces or objects?**

There is still a lot that we do not know about the virus that causes coronavirus disease. Scientists are basing a lot of information on what they know about similar viruses, such as:

- Viruses cannot generally survive on surfaces for long. They need a human body (host) to survive.
- It is more likely that the virus is spread by close contact with people who are sick (direct contact), such as through:
  - Shaking hands or hugging.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Breathing in respiratory droplets that travel through the air. This can happen when an infected person coughs or sneezes on or near other people.
- It is less likely that the virus is spread when a person touches a surface or object that has the virus on it (indirect contact). The virus may be able to enter the body if the person touches a surface or object and then touches his or her face, eyes, nose, or mouth.

### **Can a person spread the virus without having symptoms of the disease?**

It may be possible for the virus to spread before a person has symptoms of the disease, but this is most likely not the main way the virus is spreading. It is more likely for the virus to spread by being in close contact with people who are sick and breathing in the respiratory droplets of a sick person's cough or sneeze.

### **What are the symptoms of coronavirus disease?**

Symptoms vary from person to person and can range from mild to severe. Symptoms may include:

- Fever.
- Cough.
- Tiredness, weakness, or fatigue.
- Fast breathing or feeling short of breath.

These symptoms can appear anywhere from 2 to 14 days after you have been exposed to the virus. If you develop symptoms, call your health care provider. People with severe symptoms may need hospital care.

### **If I am exposed to the virus, how long does it take before symptoms start?**

Symptoms of coronavirus disease may appear anywhere from 2 to 14 days after a person has been exposed to the virus. If you develop symptoms, call your health care provider.

### **Should I be tested for this virus?**

Your health care provider will decide whether to test you based on your symptoms, history of exposure, and your risk factors.

### **How does a health care provider test for this virus?**

Health care providers will collect samples to send for testing. Samples may include:

- Taking a swab of fluid from the nose.
- Taking fluid from the lungs by having you cough up mucus (sputum) into a sterile cup.
- Taking a blood sample.
- Taking a stool or urine sample.

### **Is there a treatment or vaccine for this virus?**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

Currently, there is no vaccine to prevent coronavirus disease. Also, there are no medicines like antibiotics or antivirals to treat the virus. A person who becomes sick is given supportive care, which means rest and fluids. A person may also relieve his or her symptoms by using over-the-counter medicines that treat sneezing, coughing, and runny nose. These are the same medicines that a person takes for the common cold.

If you develop symptoms, call your health care provider. People with severe symptoms may need hospital care.

### **What can I do to protect myself and my family from this virus?**

You can protect yourself and your family by taking the same actions that you would take to prevent the spread of other viruses. Take the following actions:

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, use alcohol-based hand sanitizer.
- Avoid touching your face, mouth, nose, or eyes.
- Cough or sneeze into a tissue, sleeve, or elbow. **Do not** cough or sneeze into your hand or the air.
  - If you cough or sneeze into a tissue, throw it away immediately and wash your hands.
- Disinfect objects and surfaces that you frequently touch every day.
- Avoid close contact with people who are sick or have a fever or cough. Stay at least 3–6 ft (1–2 m) away from them, if possible.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Stay home if you are sick, except to get medical care. Call your health care provider **before** you get medical care.
- Make sure your vaccines are up to date. Ask your health care provider what vaccines you need.

## **What should I do if I need to travel?**

Follow travel recommendations from your local health authority, the CDC, and WHO.

### **Travel information and advice**

- Centers for Disease Control and Prevention (CDC):  
[www.cdc.gov/coronavirus/2019-ncov/travelers/index.html](http://www.cdc.gov/coronavirus/2019-ncov/travelers/index.html)
- World Health Organization (WHO):  
[www.who.int/emergencies/diseases/novel-coronavirus-2019/travel-advice](http://www.who.int/emergencies/diseases/novel-coronavirus-2019/travel-advice)

## **Know the risks and take action to protect your health**

- You are at higher risk of getting coronavirus disease if you are traveling to areas with an outbreak or if you are exposed to travelers from areas with an outbreak.
- Wash your hands often and practice good hygiene to lower the risk of catching or spreading the virus.

## **What should I do if I am sick?**

### **General instructions to stop the spread of infection**

- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, use alcohol-based hand sanitizer.
- Cough or sneeze into a tissue, sleeve, or elbow. **Do not** cough or sneeze into your hand or the air.
- If you cough or sneeze into a tissue, throw it away immediately and wash your hands.
- Stay home unless you must get medical care. Call your health care provider or local health authority **before** you get medical care.
- Avoid public areas. **Do not** take public transportation, if possible.
- If you can, wear a mask if you must go out of the house or if you are in close contact with someone who is not sick.

## **Keep your home clean**

- Disinfect objects and surfaces that are frequently touched every day. This may include:
  - Counters and tables.
  - Doorknobs and light switches.
  - Sinks and faucets.
  - Electronics such as phones, remote controls, keyboards, computers, and tablets.
- Wash dishes in hot, soapy water or use a dishwasher. Air-dry your dishes.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Wash laundry in hot water.

#### **Prevent infecting other household members**

- Let healthy household members care for children and pets, if possible. If you have to care for children or pets, wash your hands often and wear a mask.
- Sleep in a different bedroom or bed, if possible.
- **Do not** share personal items, such as razors, toothbrushes, deodorant, combs, brushes, towels, and washcloths.

#### **Where to find more information**

##### **Centers for Disease Control and Prevention (CDC)**

- Information and news updates: [www.cdc.gov/coronavirus/2019-ncov](http://www.cdc.gov/coronavirus/2019-ncov)

##### **World Health Organization (WHO)**

- Information and news updates: [www.who.int/emergencies/diseases/novel-coronavirus-2019](http://www.who.int/emergencies/diseases/novel-coronavirus-2019)
- Coronavirus health topic: [www.who.int/health-topics/coronavirus](http://www.who.int/health-topics/coronavirus)
- Questions and answers on COVID-19: [www.who.int/news-room/q-a-detail/q-a-coronaviruses](http://www.who.int/news-room/q-a-detail/q-a-coronaviruses)
- Global tracker: [who.sprinklr.com](http://who.sprinklr.com)

##### **American Academy of Pediatrics (AAP)**

- Information for families:  
[www.healthychildren.org/English/health-issues/conditions/chest-lungs/Pages/2019-Novel-Coronavirus.aspx](http://www.healthychildren.org/English/health-issues/conditions/chest-lungs/Pages/2019-Novel-Coronavirus.aspx)

The coronavirus situation is changing rapidly. Check your local health authority website or the CDC and WHO websites for updates and news.

#### **When should I contact a health care provider?**

- Contact your health care provider if you have symptoms of an infection, such as fever or cough, and you:
  - Have been near anyone who is known to have coronavirus disease.
  - Have come into contact with a person who is suspected to have coronavirus disease.
  - Have traveled outside of the country.

#### **When should I get emergency medical care?**

- Get help right away by calling your local emergency services (911 in the U.S.) if you have:
  - Trouble breathing.
  - Pain or pressure in your chest.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Veterans ID (ICN):

### ***Emergency Documentation***

- Confusion.
- Blue-tinged lips and fingernails.
- Difficulty waking from sleep.
- Symptoms that get worse.

Let the emergency medical personnel know if you think you have coronavirus disease.

### **Summary**

- A new respiratory virus is spreading from person to person and causing COVID-19 (coronavirus disease).
- The virus that causes COVID-19 appears to spread easily. It spreads from one person to another through droplets from coughing or sneezing.
- Older adults and those with chronic diseases are at higher risk of disease. If you are at higher risk for complications, take extra precautions.
- There is currently no vaccine to prevent coronavirus disease. There are no medicines, such as antibiotics or antivirals, to treat the virus.
- You can protect yourself and your family by washing your hands often, avoiding touching your face, and covering your coughs and sneezes.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

# **COVID-19: Quarantine and Isolation**

## **Quarantine**

### **If you were exposed**

Quarantine and stay away from others when you have been in close contact with someone who has COVID-19.

## **Isolate**

### **If you are sick or test positive**

Isolate when you are sick or when you have COVID-19, even if you don't have symptoms.

## **When to stay home**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

### **Calculating quarantine**

The date of your exposure is considered day 0. **Day 1 is the first full day after your last contact with a person who has had COVID-19.** Stay home and away from other people for at least 5 days. [Learn why CDC updated guidance for the general public.](#)

**IF YOU were exposed to COVID-19 and are NOT**

[up-to-date](#) **IF YOU were exposed to COVID-19 and are NOT on COVID-19 vaccinations**

- **Quarantine for at least 5 days**
  - **Stay home**
    - Stay home and [quarantine](#) for at least 5 full days.
    - Wear a well-fitted mask if you must be around others in your home.
  - **[Do not travel](#)**
  - **Get tested**
    - Even if you don't develop symptoms, get tested at least 5 days after you last had close contact with someone with COVID-19.
- **After quarantine**
  - **Watch for symptoms**
    - Watch for symptoms until 10 days after you last had close contact with someone with COVID-19.
  - **[Avoid travel](#)**
    - It is best to avoid travel until a full 10 days after you last had close contact with someone with COVID-19.
  - **If you develop symptoms**
    - [Isolate](#) immediately and get tested. Continue to stay home until you know the results. Wear a well-fitted mask around others.
- **Take precautions until day 10**
  - **Wear a mask**
    - Wear a well-fitted mask for 10 full days any time you are around others inside your home or in public. Do not go to places where you are unable to wear a mask.
  - **If you must travel during days 6–10, [take precautions](#).**
  - **Avoid being around people who are at high risk**

**IF YOU were exposed to COVID-19 and are**

[up-to-date](#) **IF YOU were exposed to COVID-19 and are on COVID-19 vaccinations**

- **No quarantine**
  - You do not need to stay home **unless** you develop symptoms.
- **Get tested**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Even if you don't develop symptoms, get tested at least 5 days after you last had close contact with someone with COVID-19.
- **Watch for symptoms**
  - Watch for symptoms until 10 days after you last had close contact with someone with COVID-19.
  - **If you develop symptoms**
    - Isolate immediately and get tested. Continue to stay home until you know the results. Wear a well-fitted mask around others.
- **Take precautions until day 10**
  - **Wear a mask**
    - Wear a well-fitted mask for 10 full days any time you are around others inside your home or in public. Do not go to places where you are unable to wear a mask.
  - **Take precautions if traveling**
  - **Avoid being around people who are at high risk**

**IF YOU were exposed to COVID-19 and had confirmed COVID-19 within the past 90 days (you tested positive using a viral test)**

- **No quarantine**
  - You do not need to stay home **unless** you develop symptoms.
- **Watch for symptoms**
  - Watch for symptoms until 10 days after you last had close contact with someone with COVID-19.
  - **If you develop symptoms**
    - Isolate immediately and get tested. Continue to stay home until you know the results. Wear a well-fitted mask around others.
- **Take precautions until day 10**
  - **Wear a mask**
    - Wear a well-fitted mask for 10 full days any time you are around others inside your home or in public. Do not go to places where you are unable to wear a mask.
  - **Take precautions if traveling**
  - **Avoid being around people who are at high risk**

#### **Calculating isolation**

Day 0 is your first day of symptoms or a positive viral test. **Day 1 is the first full day after your symptoms developed or your test specimen was collected.** If you have COVID-19 or have symptoms, isolate for at least 5 days.

**IF YOU tested positive for COVID-19 or have symptoms, regardless of vaccination status**

- **Stay home for at least 5 days**
  - Stay home for 5 days and isolate from others in your home.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

- Wear a well-fitted mask if you must be around others in your home.
- **Do not travel.**
- **Ending isolation if you had symptoms**
  - [End isolation after 5 full days](#) if you are fever-free for 24 hours (without the use of fever-reducing medication) and your symptoms are improving.
- **Ending isolation if you did NOT have symptoms**
  - [End isolation after at least 5 full days](#) after your positive test.
- **If you were severely ill with COVID-19 or are immunocompromised**
  - You should isolate for at least 10 days. [Consult your doctor before ending isolation.](#)
- **Take precautions until day 10**
  - **Wear a mask**
    - Wear a well-fitted mask for 10 full days any time you are around others inside your home or in public. Do not go to places where you are unable to wear a mask.
  - **Do not travel**
    - Do not travel until a full 10 days after your symptoms started or the date your positive test was taken if you had no symptoms.
  - **Avoid being around people who are at high risk**

## **Definitions**

### **Exposure**

Contact with someone infected with SARS-CoV-2, the virus that causes COVID-19, in a way that increases the likelihood of getting infected with the virus.

### **Close contact**

A close contact is someone who was less than 6 feet away from an infected person (laboratory-confirmed or a clinical diagnosis) for a cumulative total of 15 minutes or more over a 24-hour period. For example, three individual 5-minute exposures for a total of 15 minutes. People who are exposed to someone with COVID-19 after they completed at least 5 days of isolation are not considered close contacts.

### **Quarantine**

**Quarantine** is a strategy used to prevent transmission of COVID-19 by keeping people who have been in [close contact](#) with someone with COVID-19 apart from others.

### **Who does not need to quarantine?**

If you had close contact with someone with COVID-19 and you are in one of the following groups, you **do not need to quarantine**.

- You are [up to date](#) with your COVID-19 vaccines.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- You had confirmed COVID-19 within the last 90 days (meaning you tested positive using a [viral test](#)).

You should wear a [well-fitting mask](#) around others for 10 days from the date of your last close contact with someone with COVID-19 (the date of last close contact is considered day 0). [Get tested](#) at least 5 days after you last had close contact with someone with COVID-19. If you test positive or develop COVID-19 symptoms, isolate from other people and follow recommendations in the [Isolation](#) section below. If you tested positive for COVID-19 with a [viral test](#) within the previous 90 days and subsequently recovered and remain without COVID-19 symptoms, you do not need to quarantine or get tested after close contact. You should wear a [well-fitting mask](#) around others for 10 days from the date of your last close contact with someone with COVID-19 (the date of last close contact is considered day 0).

#### **Who should quarantine?**

If you come into close contact with someone with COVID-19, you should quarantine if you are not [up to date](#) on COVID-19 vaccines. This includes people who are not vaccinated.

#### **What to do for quarantine**

- Stay home and away from other people for at least 5 days (day 0 through day 5) after your last contact with a person who has COVID-19. The date of your exposure is considered day 0. Wear a [well-fitting mask](#) when around others at home, if possible.
- For 10 days after your last close contact with someone with COVID-19, watch for fever (100.4°F or greater), cough, shortness of breath, or other [COVID-19 symptoms](#).
- If you develop symptoms, [get tested](#) immediately and isolate until you receive your test results. If you test positive, follow [isolation](#) recommendations.
- If you do not develop symptoms, [get tested](#) at least 5 days after you last had close contact with someone with COVID-19.
  - If you test negative, you can leave your home, but continue to wear a [well-fitting mask](#) when around others at home and in public until 10 days after your last close contact with someone with COVID-19.
  - If you test positive, you should isolate for at least 5 days from the date of your positive test (if you do not have symptoms). If you do develop [COVID-19 symptoms](#), isolate for at least 5 days from the date your symptoms began (the date the symptoms started is day 0). Follow recommendations in the [isolation](#) section below.
  - If you are unable to get a test 5 days after last close contact with someone with COVID-19, you can leave your home after day 5 if you have been without [COVID-19 symptoms](#) throughout the 5-day period. Wear a [well-fitting mask](#) for 10 days after your date of last close contact when around others at home and in public.
  - Avoid people who are [immunocompromised or at high risk for severe disease](#), and nursing homes and other high-risk settings, until after at least 10 days.
- If possible, stay away from people you live with, especially people who are at [higher risk](#) for getting very sick from COVID-19, as well as others outside your home throughout the full 10 days after your last close contact with someone with COVID-19.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- If you are unable to quarantine, you should wear a [well-fitting mask](#) for 10 days when around others at home and in public.
- If you are unable to wear a mask when around others, you should continue to quarantine for 10 days. Avoid people who are [immunocompromised or at high risk for severe disease](#), and nursing homes and other high-risk settings, until after at least 10 days.
- See additional information [about travel](#).
- Do not go to places where you are unable to wear a mask, such as restaurants and some gyms, and avoid eating around others at home and at work until after 10 days after your last close contact with someone with COVID-19.

### **After quarantine**

- Watch for symptoms until 10 days after your last close contact with someone with COVID-19.
- If you have symptoms, isolate immediately and [get tested](#).

### **Quarantine in high-risk congregate settings**

In certain congregate settings that have high risk of secondary transmission (such as correctional and detention facilities, homeless shelters, or cruise ships), CDC recommends a 10-day quarantine for residents, regardless of vaccination and booster status. During periods of critical staffing shortages, facilities may consider shortening the quarantine period for staff to ensure continuity of operations. Decisions to shorten quarantine in these settings should be made in consultation with state, local, tribal, or territorial health departments and should take into consideration the context and characteristics of the facility. CDC's [setting-specific guidance](#) provides additional recommendations for these settings.

### **Isolation**

**Isolation** is used to separate people with confirmed or suspected COVID-19 from those without COVID-19. People who are in isolation should stay home until it's safe for them to be around others. At home, anyone sick or infected should separate from others, or wear a [well-fitting mask](#) when they need to be around others. People in isolation should stay in a specific "sick room" or area and use a separate bathroom if available. Everyone who has presumed or confirmed COVID-19 should stay home and isolate from other people for at least 5 full days (day 0 is the first day of symptoms or the date of the day of the positive viral test for asymptomatic persons). They should wear a mask when around others at home and in public for an additional 5 days. People who are confirmed to have COVID-19 or are showing symptoms of COVID-19 need to isolate regardless of their vaccination status. This includes:

- People who have a [positive viral test](#) for COVID-19, regardless of whether or not they have [symptoms](#).
- People with [symptoms](#) of COVID-19, including people who are awaiting test results or have not been tested. People with symptoms should isolate even if they do not know if they have been in close contact with someone with COVID-19.

### **What to do for isolation**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Monitor your [symptoms](#). If you have an [emergency warning sign](#) (including trouble breathing), seek emergency medical care immediately.
- Stay in a separate room from other household members, if possible.
- Use a separate bathroom, if possible.
- Take steps to [improve ventilation at home](#), if possible.
- Avoid contact with other members of the household and pets.
- Don't share personal household items, like cups, towels, and utensils.
- Wear a [well-fitting mask](#) when you need to be around other people.

Learn more about [what to do if you are sick](#) and [how to notify your contacts](#).

### **Ending isolation for people who had COVID-19 and had symptoms**

If you had COVID-19 and had [symptoms](#), isolate for at least 5 days. To calculate your 5-day isolation period, day 0 is your first day of symptoms. Day 1 is the first full day after your symptoms developed. You can leave isolation after 5 full days.

- You can end isolation after 5 full days if you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved (Loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation).
- You should continue to wear a [well-fitting mask](#) around others at home and in public for 5 additional days (day 6 through day 10) after the end of your 5-day isolation period. If you are unable to wear a mask when around others, you should continue to isolate for a full 10 days. Avoid people who are [immunocompromised](#) or at high risk for severe disease, and nursing homes and other high-risk settings, until after at least 10 days.
- If you continue to have fever or your other symptoms have not improved after 5 days of isolation, you should wait to end your isolation until you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved. Continue to wear a [well-fitting mask](#). Contact your healthcare provider if you have questions.
- See additional information [about travel](#).
- Do not go to places where you are unable to wear a mask, such as restaurants and some gyms, and avoid eating around others at home and at work until a full 10 days after your first day of symptoms.

If an individual has access to a test and wants to test, the best approach is to use an [antigen test](#)<sup>1</sup> towards the end of the 5-day isolation period. Collect the test sample only if you are fever-free for 24 hours without the use of fever-reducing medication and your other symptoms have improved (loss of taste and smell may persist for weeks or months after recovery and need not delay the end of isolation). If your test result is positive, you should continue to isolate until day 10. If your test result is negative, you can end isolation, but continue to wear a [well-fitting mask](#) around others at home and in public until day 10. Follow additional recommendations for masking and [avoiding travel](#) as described above.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

<sup>1</sup>As noted in the [labeling for authorized over-the counter antigen tests](#): Negative results should be treated as presumptive. Negative results do not rule out SARS-CoV-2 infection and should not be used as the sole basis for treatment or patient management decisions, including infection control decisions. To improve results, antigen tests should be used twice over a three-day period with at least 24 hours and no more than 48 hours between tests.

Note that these recommendations on ending isolation **do not** apply to people with moderate or severe COVID-19 or with weakened immune systems (immunocompromised). See section below for recommendations for when to end isolation for these groups.

#### **Ending isolation for people who tested positive for COVID-19 but had no symptoms**

If you test positive for COVID-19 and never develop [symptoms](#), isolate for at least 5 days. Day 0 is the day of your positive viral test (based on the date you were tested) and day 1 is the first full day after the specimen was collected for your positive test. You can leave isolation after 5 full days.

- If you continue to have no symptoms, you can end isolation after at least 5 days.
- You should continue to wear a [well-fitting mask](#) around others at home and in public until day 10 (day 6 through day 10). If you are unable to wear a mask when around others, you should continue to isolate for 10 days. Avoid people who are [immunocompromised or at high risk for severe disease](#), and nursing homes and other high-risk settings, until after at least 10 days.
- If you develop [symptoms](#) after testing positive, your 5-day isolation period should start over. Day 0 is your first day of symptoms. Follow the recommendations above for [ending isolation for people who had COVID-19 and had symptoms](#).
- See additional information [about travel](#).
- Do not go to places where you are unable to wear a mask, such as restaurants and some gyms, and avoid eating around others at home and at work until 10 days after the day of your positive test.

If an individual has access to a test and wants to test, the best approach is to use an [antigen test](#)<sup>1</sup> towards the end of the 5-day isolation period. If your test result is positive, you should continue to isolate until day 10. If your test result is negative, you can end isolation, but continue to wear a [well-fitting mask](#) around others at home and in public until day 10. Follow additional recommendations for masking and avoiding travel as described above.

<sup>1</sup>As noted in the [labeling for authorized over-the counter antigen tests](#): Negative results should be treated as presumptive. Negative results do not rule out SARS-CoV-2 infection and should not be used as the sole basis for treatment or patient management decisions, including infection control decisions. To improve results, antigen tests should be used twice over a three-day period with at least 24 hours and no more than 48 hours between tests.

#### **Ending isolation for people who were severely ill with COVID-19 or have a weakened immune system (immunocompromised)**

People who are severely ill with COVID-19 (including those who were hospitalized or required intensive care or ventilation support) and people with [compromised immune systems](#) might need to isolate at home longer. They may also require testing with a [viral test](#) to determine when they can be around others. CDC recommends an

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

isolation period of at least 10 and up to 20 days for people who were severely ill with COVID-19 and for [people with weakened immune systems](#). Consult with your healthcare provider about when you can resume being around other people.

People who are immunocompromised should talk to their healthcare provider about the potential for reduced immune responses to COVID-19 vaccines and the need to continue to follow [current prevention measures](#) (including wearing a [well-fitting mask](#), [staying 6 feet apart from others](#) they don't live with, and avoiding crowds and poorly ventilated indoor spaces) to protect themselves against COVID-19 until advised otherwise by their healthcare provider. Close contacts of immunocompromised people—including household members—should also be encouraged to receive all [recommended COVID-19 vaccine doses](#) to help protect these people.

### **Isolation in high-risk congregate settings**

In certain high-risk congregate settings that have high risk of secondary transmission and where it is not feasible to cohort people (such as correctional and detention facilities, homeless shelters, and cruise ships), CDC recommends a 10-day isolation period for residents. During periods of critical staffing shortages, facilities may consider shortening the isolation period for staff to ensure continuity of operations. Decisions to shorten isolation in these settings should be made in consultation with state, local, tribal, or territorial health departments and should take into consideration the context and characteristics of the facility. CDC's [setting-specific guidance](#) provides additional recommendations for these settings.

This CDC guidance is meant to supplement—not replace—any federal, state, local, territorial, or tribal health and safety laws, rules, and regulations.

### **Recommendations for specific settings**

These recommendations do not apply to healthcare professionals. For guidance specific to these settings, see

- Healthcare professionals: [Interim Guidance for Managing Healthcare Personnel with SARS-CoV-2 Infection or Exposure to SARS-CoV-2](#)
- Patients, residents, and visitors to healthcare settings: [Interim Infection Prevention and Control Recommendations for Healthcare Personnel During the Coronavirus Disease 2019 \(COVID-19\) Pandemic](#)

Additional setting-specific guidance and recommendations are available.

- These recommendations on quarantine and isolation do apply to K-12 School settings. Additional guidance is available here: [Overview of COVID-19 Quarantine for K-12 Schools](#)
- Travelers: [Travel](#) information and recommendations
- Congregate facilities and other settings: [guidance pages for community, work, and school settings](#)

### **Ongoing COVID-19 exposure FAQs**

**I live with someone with COVID-19, but I cannot be separated from them. How do we manage quarantine in this situation?**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

It is very important for people with COVID-19 to remain apart from other people, if possible, even if they are living together. If separation of the person with COVID-19 from others that they live with is not possible, the other people that they live with will have ongoing exposure, meaning they will be repeatedly exposed until that person is no longer able to spread the virus to other people. In this situation, there are precautions you can take to limit the spread of COVID-19:

- The person with COVID-19 and everyone they live with should wear a [well-fitting mask](#) inside the home.
- If possible, one person should care for the person with COVID-19 to limit the number of people who are in [close contact](#) with the infected person.
- Take steps to [protect yourself and others](#) to reduce transmission in the home:
  - **Quarantine** if you are not up to date with your COVID-19 vaccines.
  - **Isolate** if you are sick or tested positive for COVID-19, even if you don't have symptoms.
  - **Learn** more about the [public health recommendations](#) for testing, mask use and quarantine of close contacts, like yourself, who have ongoing exposure. These recommendations differ depending on your vaccination status.

#### **What should I do if I have ongoing exposure to COVID-19 from someone I live with?**

Recommendations for this situation depend on your vaccination status:

If you are not [up to date](#) on COVID-19 vaccines and have ongoing exposure to COVID-19, you should:

- Begin [quarantine](#) immediately and continue to quarantine throughout the isolation period of the person with COVID-19.
- Continue to quarantine for an additional 5 days starting the day after the end of isolation for the person with COVID-19.
- Get tested at least 5 days after the end of isolation of the infected person that lives with them.
  - If you test negative, you can leave the home but should continue to wear a well-fitting mask when around others at home and in public until 10 days after the end of isolation for the person with COVID-19.
- [Isolate](#) immediately if you develop [symptoms](#) of COVID-19 or test positive.

If you are [up to date](#) with COVID-19 vaccines and have ongoing exposure to COVID-19, you should:

- Get tested at least 5 days after your first exposure. A person with COVID-19 is considered infectious starting 2 days before they develop symptoms, or 2 days before the date of their positive test if they do not have symptoms.
- Get tested again at least 5 days after the end of isolation for the person with COVID-19.
- Wear a [well-fitting mask](#) when you are around the person with COVID-19, and do this throughout their isolation period.
- Wear a [well-fitting mask](#) around others for 10 days after the infected person's isolation period ends.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

[Isolate](#) immediately if you develop [symptoms](#) of COVID-19 or test positive.

#### **What should I do if multiple people I live with test positive for COVID-19 at different times?**

Recommendations for this situation depend on your vaccination status:

- **If you are not up to date with your COVID-19 vaccines**, you should:
  - [Quarantine](#) throughout the isolation period of any infected person that you live with.
  - Continue to quarantine until 5 days after the end of isolation date for the most recently infected person that lives with you. For example, if the last day of isolation of the person most recently infected with COVID-19 was June 30, the new 5-day quarantine period starts on July 1.
  - Get tested at least 5 days after the end of isolation for the most recently infected person that lives with you.
  - Wear a [well-fitting mask](#) when you are around any person with COVID-19 while that person is in isolation.
  - Wear a [well-fitting mask](#) when you are around other people until 10 days after your last close contact.
  - [Isolate](#) immediately if you develop [symptoms of COVID-19](#) or test positive.
- If you are [up to date](#) with COVID-19 your vaccines , you should:
  - Get tested at least 5 days after your first exposure. A person with COVID-19 is considered infectious starting 2 days before they developed symptoms, or 2 days before the date of their positive test if they do not have symptoms.
  - Get tested again at least 5 days after the end of isolation for the most recently infected person that lives with you.
  - Wear a [well-fitting mask](#) when you are around any person with COVID-19 while that person is in isolation.
  - Wear a [well-fitting mask](#) around others for 10 days after the end of isolation for the most recently infected person that lives with you. For example, if the last day of isolation for the person most recently infected with COVID-19 was June 30, the new 10-day period to wear a well-fitting mask indoors in public starts on July 1.
  - [Isolate](#) immediately if you develop [symptoms](#) of COVID-19 or test positive.

#### **I had COVID-19 and completed isolation. Do I have to quarantine or get tested if someone I live with gets COVID-19 shortly after I completed isolation?**

No. If you recently completed isolation and someone that lives with you tests positive for the virus that causes COVID-19 shortly after the end of your isolation period, you do not have to quarantine or get tested as long as you do not develop new symptoms. Once all of the people that live together have completed isolation or quarantine, refer to the guidance below for new exposures to COVID-19.

- If you had COVID-19 in the previous 90 days and then came into [close contact](#) with someone with COVID-19, you do not have to quarantine or get tested if you do not have symptoms. But you should:

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Wear a [well-fitting mask](#) indoors in public for 10 days after exposure.
- Monitor for [COVID-19 symptoms](#) and [isolate](#) immediately if symptoms develop.
- Consult with a healthcare provider for testing recommendations if new symptoms develop.
- If more than 90 days have passed since your recovery from infection, follow CDC's [recommendations](#) for close contacts. These recommendations will differ depending on your vaccination status.

## **10 Things You Can Do to Manage Your COVID-19 Symptoms at Home**

### **If you have possible or confirmed COVID-19**

1. **Stay home** except to get medical care.
2. **Monitor your symptoms** carefully. If your symptoms get worse, call your healthcare provider immediately.
3. **Get rest and stay hydrated.**
4. If you have a medical appointment, **call the healthcare provider** ahead of time and tell them that you have or may have COVID-19.
5. For medical emergencies, call 911 and **notify the dispatch personnel** that you have or may have COVID-19.
6. **Cover your cough and sneezes** with a tissue or use the inside of your elbow.
7. **Wash your hands often** with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol.
8. As much as possible, **stay in a specific room and away from other people** in your home. Also, you should use a separate bathroom, if available. If you need to be around other people in or outside of the home, wear a mask.
9. **Avoid sharing personal items** with other people in your household, like dishes, towels, and bedding.
10. **Clean all surfaces** that are touched often, like counters, tabletops, and doorknobs. Use household cleaning sprays or wipes according to the label instructions.

Obstetrics and Gynecology

# **Threatened Miscarriage**

A threatened miscarriage occurs when a woman has vaginal bleeding during the first 20 weeks of pregnancy but the pregnancy has not ended. If vaginal bleeding occurs during this time, the health care provider will do tests to make sure the woman is still pregnant. The woman's condition may be considered a threatened miscarriage if the tests show:

- That she is still pregnant.
- That the embryo or unborn baby (fetus) inside the uterus is still growing.

A threatened miscarriage does not mean your pregnancy will end, but it does increase the risk of losing your pregnancy (miscarriage).

## **What are the causes?**

The cause of this condition is usually not known.

## **What increases the risk?**

The following factors may make a pregnant woman more likely to have a miscarriage:

### **Certain medical conditions**

- Conditions that affect the hormone balance in the body, such as thyroid disease or polycystic ovary syndrome.
- Diabetes.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Autoimmune disorders.
- Infections.
- Bleeding disorders.
- Obesity.

#### **Lifestyle factors**

- Using products with tobacco or nicotine or being exposed to tobacco smoke.
- Having alcohol.
- Having large amounts of caffeine.
- Recreational drug use.

#### **Problems with reproductive organs or structures**

- Cervical insufficiency. This is when the lowest part of the uterus (cervix) opens and thins before pregnancy is at term.
- Having a condition called Asherman syndrome, which causes scarring in the uterus or causes the uterus to be abnormal in structure.
- Fibrous growths, called fibroids, in the uterus.
- Congenital abnormalities. These problems are present at birth.
- Infection of the cervix or uterus.

#### **Personal or medical history**

- Injury (trauma).
- Having had a miscarriage before.
- Being younger than age 18 or older than age 35.
- Exposure to harmful substances in the environment. This may include radiation or heavy metals, such as lead.
- Using certain medicines.

#### **What are the signs or symptoms?**

Symptoms of this condition include:

- Vaginal bleeding or spotting, with or without cramps or pain.
- Mild pain or cramps in your abdomen.

#### **How is this diagnosed?**

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

You may have tests to check whether you are still pregnant. These tests will be done if you have bleeding, with or without pain, in your abdomen before the 20th week of pregnancy. These tests include:

- Ultrasound.
- A physical exam.
- Measurement of your baby's heart rate.
- Lab tests, such as blood tests, urine tests, or swabs for infection.

You may be diagnosed with a threatened miscarriage if:

- Ultrasound testing shows that you are still pregnant.
- Your baby's heart rate is strong.
- A physical exam shows that your cervix is closed.
- Blood tests confirm that you are still pregnant.

### **How is this treated?**

No treatments have been shown to prevent a threatened miscarriage from going on to a complete miscarriage. However, the right home care is important.

### **Follow these instructions at home:**

- Get plenty of rest.
- **Do not** have sex, douche, or put anything in your vagina, such as tampons, until your health care provider says it is okay.
- **Do not** smoke or use recreational drugs.
- **Do not** drink alcohol.
- Avoid caffeine.
- Keep all follow-up prenatal visits. This is important.

### **Contact a health care provider if:**

- You have light vaginal bleeding or spotting while pregnant.
- You have pain or cramping in your abdomen.
- You have a fever.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

#### **Get help right away if:**

- Heavy bleeding soaks through 2 large sanitary pads an hour for more than 2 hours.
- Blood clots come out of your vagina.
- Tissue comes out of your vagina.
- You leak fluid, or you have a gush of fluid from your vagina.
- You have severe low back pain or cramps in your abdomen.
- You have a fever, chills, and severe pain in the abdomen.

#### **Summary**

- A threatened miscarriage occurs when a woman bleeds from the vagina during the first 20 weeks of pregnancy but the pregnancy has not ended.
- The cause of a threatened miscarriage is usually not known.
- Symptoms of this condition may include vaginal bleeding and mild pain or cramps in your abdomen.
- No treatments have been shown to prevent a threatened miscarriage from going on to a complete miscarriage.
- Keep all follow-up prenatal visits. This is important.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

Gastroenterology

## **Cholelithiasis**

Patient Name: **Amieva, Yessenia**

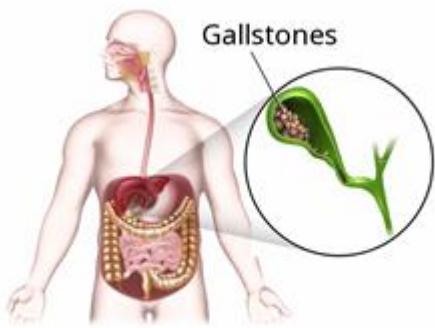

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Emergency Documentation***

Cholelithiasis is a disease in which gallstones form in the gallbladder. The gallbladder is an organ that stores bile. Bile is a fluid that helps to digest fats. Gallstones begin as small crystals and can slowly grow into stones. They may cause no symptoms until they block the gallbladder duct, or cystic duct, when the gallbladder tightens (contracts) after food is eaten. This can cause pain and is known as a gallbladder attack, or biliary colic.

There are two main types of gallstones:

- Cholesterol stones. These are the most common type of gallstone. These stones are made of hardened cholesterol and are usually yellow-green in color. Cholesterol is a fat-like substance that is made in the liver.
- Pigment stones. These are dark in color and are made of a red-yellow substance, called bilirubin, that forms when hemoglobin from red blood cells breaks down.

### **What are the causes?**

This condition may be caused by an imbalance in the different parts that make bile. This can happen if the bile:

- Has too much bilirubin. This can happen in certain blood diseases, such as sickle cell anemia.
- Has too much cholesterol.
- Does not have enough bile salts. These salts help the body absorb and digest fats.

In some cases, this condition can also be caused by the gallbladder not emptying completely or often enough. This is common during pregnancy.

### **What increases the risk?**

The following factors may make you more likely to develop this condition:

- Being female.
- Having multiple pregnancies. Health care providers sometimes advise removing diseased gallbladders before future pregnancies.
- Eating a diet that is heavy in fried foods, fat, and refined carbohydrates, such as white bread and white rice.
- Being obese.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Being older than age 40.
- Using medicines that contain female hormones (estrogen) for a long time.
- Losing weight quickly.
- Having a family history of gallstones.
- Having certain medical problems, such as:
  - Diabetes mellitus.
  - Cystic fibrosis.
  - Crohn's disease.
  - Cirrhosis or other long-term (chronic) liver disease.
  - Certain blood diseases, such as sickle cell anemia or leukemia.

### **What are the signs or symptoms?**

In many cases, having gallstones causes no symptoms. When you have gallstones but do not have symptoms, you have silent gallstones. If a gallstone blocks your bile duct, it can cause a gallbladder attack. The main symptom of a gallbladder attack is sudden pain in the upper right part of the abdomen. The pain:

- Usually comes at night or after eating.
- Can last for one hour or more.
- Can spread to your right shoulder, back, or chest.
- Can feel like indigestion. This is discomfort, burning, or fullness in your upper abdomen.

If the bile duct is blocked for more than a few hours, it can cause an infection or inflammation of your gallbladder (cholecystitis), liver, or pancreas. This can cause:

- Nausea or vomiting.
- Bloating.
- Pain in your abdomen that lasts for 5 hours or longer.
- Tenderness in your upper abdomen, often in the upper right section and under your rib cage.
- Fever or chills.
- Skin or the white parts of your eyes turning yellow (jaundice). This usually happens when a stone has blocked bile from passing through the common bile duct.
- Dark urine or light-colored stools.

### **How is this diagnosed?**

This condition may be diagnosed based on:

- A physical exam.
- Your medical history.
- Ultrasound.

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- CT scan.
- MRI.

You may also have other tests, including:

- Blood tests to check for signs of an infection or inflammation.
- Cholescintigraphy, or HIDA scan. This is a scan of your gallbladder and bile ducts (biliary system) using non-harmful radioactive material and special cameras that can see the radioactive material.
- Endoscopic retrograde cholangiopancreatogram. This involves inserting a small tube with a camera on the end (endoscope) through your mouth to look at bile ducts and check for blockages.

### **How is this treated?**

Treatment for this condition depends on the severity of the condition. Silent gallstones do not need treatment. Treatment may be needed if a blockage causes a gallbladder attack or other symptoms. Treatment may include:

- Home care, if symptoms are not severe.
  - During a simple gallbladder attack, stop eating and drinking for 12–24 hours (except for water and clear liquids). This helps to "cool down" your gallbladder. After 1 or 2 days, you can start to eat a diet of simple or clear foods, such as broths and crackers.
  - You may also need medicines for pain or nausea or both.
  - If you have cholecystitis and an infection, you will need antibiotics.
- A hospital stay, if needed for pain control or for cholecystitis with severe infection.
- Cholecystectomy, or surgery to remove your gallbladder. This is the most common treatment if all other treatments have not worked.
- Medicines to break up gallstones. These are most effective at treating small gallstones. Medicines may be used for up to 6–12 months.
- Endoscopic retrograde cholangiopancreatogram. A small basket can be attached to the endoscope and used to capture and remove gallstones, mainly those that are in the common bile duct.

### **Follow these instructions at home:**

#### **Medicines**

- Take over-the-counter and prescription medicines only as told by your health care provider.
- If you were prescribed an antibiotic medicine, take it as told by your health care provider. **Do not** stop taking the antibiotic even if you start to feel better.
- Ask your health care provider if the medicine prescribed to you requires you to avoid driving or using machinery.

#### **Eating and drinking**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

- Drink enough fluid to keep your urine pale yellow. This is important during a gallbladder attack. Water and clear liquids are preferred.
- Follow a healthy diet. This includes:
  - Reducing fatty foods, such as fried food and foods high in cholesterol.
  - Reducing refined carbohydrates, such as white bread and white rice.
  - Eating more fiber. Aim for foods such as almonds, fruit, and beans.

### **Alcohol use**

- If you drink alcohol:
  - Limit how much you use to:
    - 0–1 drink a day for nonpregnant women.
    - 0–2 drinks a day for men.
  - Be aware of how much alcohol is in your drink. In the U.S., one drink equals one 12 oz bottle of beer (355 mL), one 5 oz glass of wine (148 mL), or one 1½ oz glass of hard liquor (44 mL).

### **General instructions**

- **Do not** use any products that contain nicotine or tobacco, such as cigarettes, e-cigarettes, and chewing tobacco. If you need help quitting, ask your health care provider.
- Maintain a healthy weight.
- Keep all follow-up visits as told by your health care provider. These may include consultations with a surgeon or specialist. This is important.

### **Where to find more information**

- National Institute of Diabetes and Digestive and Kidney Diseases: [www.niddk.nih.gov](http://www.niddk.nih.gov)

### **Contact a health care provider if:**

- You think you have had a gallbladder attack.
- You have been diagnosed with silent gallstones and you develop pain in your abdomen or indigestion.
- You begin to have attacks more often.
- You have dark urine or light-colored stools.

### **Get help right away if:**

- You have pain from a gallbladder attack that lasts for more than 2 hours.
- You have pain in your abdomen that lasts for more than 5 hours or is getting worse.
- You have a fever or chills.
- You have nausea and vomiting that do not go away.
- You develop jaundice.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Emergency Documentation***

## **Summary**

- Cholelithiasis is a disease in which gallstones form in the gallbladder.
- This condition may be caused by an imbalance in the different parts that make bile. This can happen if your bile has too much bilirubin or cholesterol, or does not have enough bile salts.
- Treatment for gallstones depends on the severity of the condition. Silent gallstones do not need treatment.
- If gallstones cause a gallbladder attack or other symptoms, treatment usually involves not eating or drinking anything. Treatment may also include pain medicines and antibiotics, and it sometimes includes a hospital stay.
- Surgery to remove the gallbladder is common if all other treatments have not worked.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

#### **Assessment/Plan**

##### **1. Cholelithiasis**

We discussed the recommendation for a laparoscopic cholecystectomy. We discussed the risks, benefits, and alternatives to surgery. The risks include, but are not limited to: pain, infection, bleeding, damage to adjacent structures, and the need for further surgery. There is a 1 in 200 risk of injury to the bile ducts. There is a 1 in 400 risk of chronic diarrhea as a result of removing the gallbladder. We discussed the possible need for conversion to an open cholecystectomy, and the possible need for an intraoperative cholangiogram (IOC). All of their questions were answered. The patient voiced understanding of the proposed surgery and its inherent risks, and consented to proceed with a laparoscopic cholecystectomy, possible open, possible IOC.

-stop Bentyl as this is contraindicated in breastfeeding  
-low fat diet discussed  
-HCG for preop  
-repeat CBC and CMP today so I can see results preop

back pain. The back pain was still there. The pain was severe. It was associated with nausea. She has not had anything like this before. The pain lasted for about an hour , then it decreased in severity. For the next hour the pain was not as bad but seemed to wax and wane in severity. She presented to the ED where she had an eval that showed gallstones. Since then she has been taking some bentyl and stayed on a low fat diet. She has not had any further issues. She is breastfeeding.

MEMORANDUM FOR RECORD

SUBJECT: Request for Temporary Medical Exemption to COVID-19 Vaccination

1. 1LT Yessenia Amieva (DODID# 1548801377) is requesting a temporary medical exemption to the Pfizer / Comirnaty COVID-19 vaccine.
2. The Soldier has the diagnosis of Pregnancy with EDD of 02 DEC 2021 which per the Center for Disease Control and Prevention is not a contraindication to receiving the COVID-19 vaccination. However, FRAGO 5 TO HQDA EXORD 225-21 specifies that pregnancy may warrant a temporary exemption if a soldier has continued concerns following consultation with her healthcare provider.
3. I concur with this request for a temporary medical exemption to the COVID-19 vaccination. I have ensured that a temporary medical exemption (Medical Temporary, MT) has been placed in the Soldier's EHR. This Memorandum will be routed to 1ID Division Surgeon for entry into MEDPROS.
4. Point of contact for this memorandum is the undersigned at [kyanna.s.kuntz.civ@mail.mil](mailto:kyanna.s.kuntz.civ@mail.mil) or (785) 239-7489.

### **Chief Complaint**

phase 2 ets

### **Assessment/Plan**

1. EXAM, OCCUPATIONAL, RETIREMENT OR SEPARATION FROM MILITARY UNIFORMED SERVICE, LONG

- Completed SHPE. No concerning findings, fit for duty and deployable. REFER TO MEDPROS FOR COMPLETE MEDICAL DOCUMENTATION. THIS PROVIDER HAS PERSONALLY REVIEWED ALL FORMATTED AND FREE TEXT RESPONSES ON DD forms 2808 and 2807.

-Ingrown toenails; make appointment.

-Dyspnea at night; follow up with PCM. Recommend PSG.

-Chronic bilateral knee; make appointment.

-Acne; topical and doxycycline trial.

Reviewed healthy diet and exercise. Immunizations up to date today. Screened for health conditions IAW USPSTF recommendations. Reviewed family, past medical, and social history. Negative screening for alcohol abuse, tobacco dependence, high risk sexual behavior, and depression.

SM was given recommendations for age and gender appropriate screening laboratory and imaging procedures consistent with the U.S Preventative Services Task Force (USPSTF) A and B recommendations to include healthy diet and exercise, healthy BMI, risk avoidance, testicular/breast cancer self-Checks, sleep hygiene and skin cancer prevention or deployment specific concerns.

Afforded patient the opportunity to ask any further questions or address concerns that weren't covered in this visit or were unclear. Patient voiced understanding and had no further questions or concerns at this time. Patient is discharged to return to the PCM for next scheduled exam and/or the presentation of any new symptoms.

#### Assessment/Plan

##### 1. Low back pain

Reviewed physical exam. Discussed conservative measures, including gentle stretching, heat or ice to comfort, Tylenol PRN, therapeutic massage, Physical Therapy, and rest (avoid heavy lifting). SM should return in about 4 weeks if pain is not improved, re evaluation is warranted at that time.

Ordered:

Referral Request 2.0

##### 2. Tremor in bilateral outstretched hands

Overall benign presentation, will obtain lab work and have her follow up with PCM if not improved x 2 weeks.

Ordered:

CBC w/ Diff

Comprehensive Metabolic Panel

TSH, Sensitive

Vitamin D 25 Hydroxy Level

##### 3. Pelvic floor dysfunction

Pelvic floor dysfunction is fairly minimal at this time. She states she has intermittent few drops of urine loss with jump/sneeze/cough, not every time, since last pregnancy. She is currently pregnant. She will follow up as needed, could consider further PT if needed.

##### 4. Pain of right ankle joint

Ankle and knee pain is improved, but not resolved. She states she is most worried about her back today. No further eval or workup is needed today.

##### 5. Pain in right knee

## **Office and Clinic Notes**

-- 04/05/2023 09:01:00 CDT, Medical Service Physical Therapy, 24 year old ADSM with concern of back pain, current pregnancy., Evaluate and Treat, Low back pain

### **History of Present Illness**

24 y/O ADF presents to clinic C/O 2 to 8/10 back pain and a 5/10 Ankle and knee pain. SM states Ankle pain has been going on for over a year and has tried PT for it. SM states it didn't help very much and would like to see what else can be done for it. SM states of the two, the back pain is worse and is more concerned about that. SM states the pain began randomly and has been constant and ranges from a 2/10 to 8/10. SM states it can get worse if she stands up wrong, stands for too long, and if she repositions wrong. SM states she is willing to do anything that will make them better and is just tired of dealing with it. SM states she is taking medication as prescribed, has NKA, displays no red flags, and denies all SI/HI.

### **Review of Systems**

## ***Office and Clinic Notes***

### **Back**

**Inspection:** The patient's spine was examined and there was no erythema, edema, ecchymosis, asymmetry, or step-offs. No gross muscle atrophy noted.

**Palpation:** The patient has tenderness to palpation over the paraspinal musculature of the lower back, no midline tenderness.

**Range of Motion:** The patient demonstrated full ROM in flexion, extension , rotation to the left and right and side bending.

**Strength:** Muscle strength 5 /5 and equal bilaterally

**Neurovascular:** Normal and symmetric sensation to light touch bilaterally

**Special Tests:** A straight leg raise and contralateral straight leg raise failed to produce radicular symptoms.

### **Family History**

Breast cancer: Paternal Grandmother - FH.

Cancer: Paternal Grandmother - FH.

### **Chief Complaint**

sore throat, possbile strep

### **Assessment/Plan**

1. Sore throat

Swabbed for strep due to symptoms, treating as we do NOT have rapid strep, elected to take oral abx over injectable. We will call with culture results. No cough. Has not been using warm salt water gargles, or taking ibuprofen/tylenol for headache/sore throat, encouraged these practices. Pt needs to replace her toothbrush and squirt out top layer of toothpaste. Denies recent travel. No hx of asthma. PT denies NVD, fevers, chest pain, SOB, abdominal pain, weakness or dizziness

Ordered:

penicillin V potassium (penicillin V potassium 500 mg oral tablet), 1 tab(s), Oral, BID, on an empty stomach recommend eating a yogurt daily or taking an OTC probiotic when taking this medication, X 10 days, # 20 tab(s), 0 total refill(s), Acute, 02/09/2023, 1 tab(s) Oral BID,x10 days,Instr:on an empty stomach; recom...

Throat Culture

Throat Culture

### **History of Present Illness**

24 year old active duty complains of 5/10 sore throat radiating to her ears x3 days.

Pt states pain was gradual and been getting worse.

Redness in ear and tonsils white spotting.

Pt states taking ibuprofen and medication did not help. Pt states going to BH.

concur with assessment, KP

Add: Denies fevers, minimal appetite, not using warm salt water to gargle.

\*\*Had recent fetal demise end of December at KU, 16 weeks gestation, reports they were able to deliver and that she was able to hold 'him' that day. Reports she is starting BH this week for her grief.

Reports no other sick contacts, she has a 1 year old child at home that is well. Has not used warm salt water gargles. KP

spotting while pregnancy

#### **Assessment/Plan**

1. Pregnant

Currently pregnant, and has profile from OBGYN. She states she has just talked to GYN, they told her that symptoms of vaginal bleeding is to be expected. She will follow up as needed. Profile to be managed by obstetrics.

#### **History of Present Illness**

24 Y/O ADF presents to clinic C/O spotting while being pregnant. Sm states she noticed it x2 weeks ago but it didn't become constant until x3 days ago. SM states there is no pain or discomfort, but she is concerned about it. SM states she had seen OBGYN and gone to the ER. SM states she made this apt. to F/U and make sure Provider and OB were on the same page. Sm states OB gave her a 2 week profile, and she was wondering if the profile would be able to be extended past the 2 weeks already stated. SM states she is only

### **Chief Complaint**

Ingrown toenail

### **Assessment/Plan**

1. Ingrown nail

- Vital signs stable save for mild tachycardia at screening, asymptomatic. The patient is afebrile and in no acute distress
- Overall benign physical examination with no signs of medical emergency present.
- Patient is clinically well, presents for evaluation of ingrown toenail of the lateral aspect of the left great toe. No present signs of ingrown nail or soft tissue infection
- Plan:
  - Pain management medications: Not applicable
  - Other medications: Not applicable
  - Discussed realistic expectations/goals for management of condition and treatment options to include pharmacological and non-pharmacological.
  - Discussed side effects of medications, as well as safe use and disposal.
  - Discussed the patients home environment and any barriers to treatment efficacy.
  - Discussed objectives to evaluate treatment efficacy/progress, including not only symptom relief but also improvement in physical/psychosocial functioning and ability to perform ADLs.
  - Labs: Not applicable
  - Rads: Not applicable
  - Referral(s): Not applicable
  - Patient Education: We discussed sick call hours, patient was advised that in the event her toenail becomes ingrown again she should present to sick call between 730 and 8:00 at which point it will be addressed. We discussed proper nail hygiene, warm water soaks in the event that the toe becomes inflamed.
  - Patient perspective/goals: None Endorsed
  - F/U: As needed
  - Profile: Nonapplicable
  - Disposition: Return to duty

Afforded patient the opportunity to ask any further questions or address concerns that were not covered in this visit or were unclear. Patient voiced understanding and had no further questions or concerns at this time. Patient expressed an understanding of the treatment plan and was in agreement. Return precautions were discussed. Patient directed to follow-up if symptoms do not improve, worsen, or if additional questions/concerns arise.

-USPSTF grade A and B recommendations discussed

-Medication Reconciliation completed. The Patient's medications were updated and reviewed with them.

### **History of Present Illness**

24yo ADF presents to FHC with C/O ingrown toenail pain. Soldier states that she has had an ingrown toenail on her left hallux. Soldier states that over time it has gotten better, however she still feels tenderness to touch on said digit. See also expresses that she may be cutting her toenails improperly.

Agree with the above

68W note with the following addendum:

### **Review of Systems**

Systemic: No fever, no chills, and no recent weight loss.

HEENT: No headache, no new visual symptoms, no hearing loss reported, no earache, no nasal discharge, no congestion, no sore throat

Cardiovascular: No exertional chest pain or discomfort. No palpitations

Pulmonary: No dyspnea and no cough.

Gastrointestinal: No change in appetite. No abdominal pain. No dysphagia/odynophagia.

No Nausea, vomiting, diarrhea or constipation. No jaundice, no hematemesis, no hematochezia.

Genitourinary: No change in urinary frequency and no feelings of urinary urgency. No dysuria or abnormal discharge.

Musculoskeletal: No myalgia or arthralgia, no swelling of extremities.

Neurological: No lightheadedness, no changes in gait. No seizures. No numbness, tingling, or weakness.

Skin: No new lesions or rash, history of ingrown nail of the left great toe

Psych: No panic attacks, no anxiety, no depression, no changes in mood, no SI/HI

Hematologic: No easy bruising or prolonged bleeding episodes

## ***Office and Clinic Notes***

### **Assessment/Plan**

#### **1. Knee pain**

- Vital signs stable, afebrile in no acute distress
- Overall benign physical examination with no signs of medical emergency present.
- Patient is clinically well, this is a chronic condition with no acute onset and absent preceding trauma. Do not suspect Fx or septic joint. Ddx includes patellofemoral pain syndrome or possible bursitis.
- Naproxen and APAP entered and to be taken as prescribed, HEP provided and referral to PT entered. Pt directed to follow up in clinic in 30 days in the event she has no improvement in her symptoms, or sooner if the symptoms worsen.

Ordered:

acetaminophen, 3 tab(s), Oral, every 6 hr, PRN pain or fever, # 50 tab(s), 0 total refill(s), Acute, 03/31/2022, 3 tab(s) Oral every 6 hr, PRN: as needed for pain or fever, Pharmacy: DOD FT RILEY PHARMACY [Last filled 03/03/22]

naproxen, 1 tab(s), Oral, BID, with food, # 20 tab(s), 0 total refill(s), Acute, 03/17/2022, 1 tab(s) Oral BID, Instr: with food, Pharmacy: DOD FT RILEY PHARMACY [Last filled 03/03/22]

Referral Request 2.0

#### **2. Ankle pain**

- Patient is clinically well, this is a chronic condition with no acute onset and absent preceding trauma. Do not suspect fracture or septic joint. Pain likely due to local inflammatory process secondary to overuse and weight gain with pregnancy.
- Naproxen and APAP entered and to be taken as prescribed, HEP provided and referral to PT entered. Pt directed to follow up in clinic in 30 days in the event she has no improvement in her symptoms, or sooner if the symptoms worsen.

Ordered:

acetaminophen, 3 tab(s), Oral, every 6 hr, PRN pain or fever, # 50 tab(s), 0 total refill(s), Acute, 03/31/2022, 3 tab(s) Oral every 6 hr, PRN: as needed for pain or fever, Pharmacy: DOD FT RILEY PHARMACY [Last filled 03/03/22]

naproxen, 1 tab(s), Oral, BID, with food, # 20 tab(s), 0 total refill(s), Acute, 03/17/2022, 1 tab(s) Oral BID, Instr: with food, Pharmacy: DOD FT RILEY PHARMACY [Last filled 03/03/22]

Referral Request 2.0

#### **3. Acne rosacea**

- Do not suspect cellulitis/erysipelas. Lesion consistent with acne rosacea. Pt reports she has had similar outbreaks in the past and had been treated previously with benzoyl peroxide. Reported this provided mild relief but did not result in complete resolution of the problem. Have prescribed topical metronidazole to be used on the area. Pt advised regarding dietary/lifestyle modifications which may decrease recurrence. Advised to follow up in clinic in 30 days in the event the condition does not resolve at which point will consider referral to dermatology for further evaluation.

Ordered:

metroNIDAZOLE topical, 1 appl(s), Topical, Daily, apply a thin film to affected area after washing, # 45 g, 0 total refill(s), Maintenance, 1 appl(s) Topical Daily, x7 days, Instr: apply thin film to affected area after washing, Pharmacy: DOD FT RILEY PHARMACY [Last filled 03/03]

Referral Request 2.0

All questions were answered, the patient indicated understanding and agrees with the stated treatment plan.

## ***Office and Clinic Notes***

-- 03/03/2022 12:08:00 CST, Medical Service Physical Therapy, Chronic bilateral knee and ankle pain. Pt is roughly 3 mos postpartum. Had been seen previously for this issue but no therapy initiated at the time., Evaluate and Treat, Knee pain | Ankle pain...

### **History of Present Illness**

#### **Intake Staff HPI:**

#### **HPI**

#### Ambulatory HPI

MAR/03/22 11:25:00

23 yo ADF presents to FHC co knee and ankle pain. Pt states she has had bilateral knee pain for half a year now. Pt states pain is a sore and sharp pain that does not radiate, and stays in the front of her knee. Pt states pain gets worse when she is inactive for a long period of time and then starts to exercise. Pt states she has also had bilateral ankle pain for around a year. Pt also describes pain as a sore and sharp pain that does radiate to the inner ankle, and is located on the outside of the ankle. Pt denies any MOI for these pains.

Signed By: HWANG, YONG

#### **Provider HPI:**

Agree with the above

68W note with the following addendum: knee pain reportedly worse on the left, whereas ankle pain worse on the right. Knee pain is exacerbated by prolonged sitting, deep squats and ascending stairs. Reports never having been seen/evaluated for these concerns in the past. Pt also requests referral to dermatology for rash on the face which has come and gone over the years. rash is red and confined to the bilateral cheeks, denies any known triggers for eruption, reports having been treated with benzoyl peroxide in the past which "worked a little" but the rash has since recurred.

### **Review of Systems**

Systemic: No fever, no chills, and no recent weight loss.

HEENT: No headache, no new visual symptoms, no hearing loss reported, no earache, no nasal discharge, no congestion, no sore throat

Cardiovascular: No exertional chest pain or discomfort. No palpitations

Pulmonary: No dyspnea and no cough.

Gastrointestinal: No change in appetite. No abdominal pain. No dysphagia/odynophagia. No Nausea, vomiting, diarrhea or constipation. No jaundice, no hematemesis, no hematochezia.

Genitourinary: No change in urinary frequency and no feelings of urinary urgency. No dysuria or abnormal discharge.

Musculoskeletal: Knee/ankle pain per HPI

Neurological: No lightheadedness, no changes in gait. No seizures. No numbness, tingling, or weakness.

Skin: Rash on face

Psych: No panic attacks, no anxiety, no depression, no changes in mood, no SI/HI

Hematologic: No easy bruising or prolonged bleeding episodes

#### Pain

DVPRS Pain Scale: 1 - Hardly notice pain (03/03/22)

Past Week DVPRS score: 4 - Distracts me, can do usual activities (03/03/22)

### **Office and Clinic Notes**

**HT:** 170 cm **WT:** 89.00 kg(Dosing) **WT:** 89 kg(Measured) **BMI:** 30.8

Adult - Depression Screening  
on 03/03/22. Satisfied by HWANG, YONG

General: VSS, alert and oriented, well nourished, no acute distress

HEENT: Normocephalic. PERRL, EOMI, normal conjunctiva, no scleral icterus. Normal hearing. No nasal discharge. Moist oral mucosa.

Neck: Supple, non-tender, no JVD, no lymphadenopathy

Lungs: Clear to auscultation and percussion, non-labored respiration

Heart: Normal rate, regular rhythm, no murmur, gallop or edema

Abdomen: Soft, non-tender, non-distended, normal bowel sounds, no masses

Musculoskeletal: The bilateral knees and ankles are atraumatic in appearance, no edema or ecchymosis noted. FAROM and PROM of the bilateral knees and ankles. Resisted movement of the knees and ankles results in no sensation of pain. There is no reported tenderness to palpation about the knees or ankles bilaterally. Strength equal bilaterally with knee flexion and extension as well as ankle dorsiflexion and plantarflexion, inversion and eversion. There is no increased laxity about the ankle joints. The knee examination was normal bilaterally with negative McMurray, Negative Lachman, negative anterior/posterior drawer, negative varus/valgus, and negative patellar grind.

Skin: Skin is warm and dry, no abnormal pigmentation. The cheeks of the face are erythematous and inflamed with accentuated pores. The are is not tender nor warm to the touch and there is no underlying fluctuance. The erythema is confined to the cheeks and does not extend proximal to the orbits or nose at present.

Neurologic: Awake, alert, and oriented x 3, CN II-XII grossly intact

Psychiatric: Cooperative, appropriate mood and affect

#### **Chief Complaint**

Covid exemption

#### **Assessment/Plan**

1. COVID-19 mRNA vaccine declined  
medical temporary exemption until pregnancy finished (60 days). Follow up after prn.  
SM has been counseled on their need to obtain a mandatory COVID-19  
vaccination in accordance with the Secretary of Defense Memorandum dated 24  
AUG 2021. They have been educated on the need of this vaccination, potential  
side effects, risks, and benefits.

The SM has been afforded the opportunity to ask questions about the  
vaccination and I have answered all medical questions that they have to the  
best of my ability.

The SM endorses that they HAVE viewed the mandatory information and video  
offered at the unit level.

#### **Problem List/Past Medical History**

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Office and Clinic Notes***

They have been informed that the only current FDA Approved COVID vaccine is by Pfizer/Biontec/Comirnaty and that this the only COVID-19 Vaccine that is considered mandatory, however they can elect to receive the Johnson & Johnson or the Moderna Vaccine and it will meet the requirements of COVID vaccination.

They have been informed that a prior history of COVID-19 infection does not prevent this requirement and that they will not be tested for a prior history of COVID-19 before their vaccine.

They have been informed that there may be legal ramifications for refusal of the vaccine, however that discussion is beyond the scope of this encounter and they have been encouraged to speak with JAG/Legal regarding those aspects.

At this time, the SM DOES request a temporary medical exemption.

At this time, the SM was informed that they DO NOT QUALIFY for medical exemption per ACOG recommendations.

After discussion, SM elects NOT TO RECEIVE the vaccine at this time. She defers vaccination until after pregnancy complete.

Afforded patient the opportunity to ask any further questions or address concerns that were not covered in this visit or were unclear. Patient voiced understanding and had no further questions or concerns at this time. Patient expressed an understanding of the treatment plan and was in agreement. Follow-up if symptoms do not improve, worsen, or if questions/concerns arise.

-USPSTF grade A and B recommendations discussed

-The Patient's medications were updated and reviewed with them and they were given their Medication Reconciliation.

-Return precautions given

Ordered:

benzoyl peroxide 2.5% topical liquid, 1 appl(s), Topical, BID, # 240 mL, 0 total refill(s), Maintenance, 1 appl(s) Topical BID, Pharmacy: DOD FT RILEY PHARMACY [Not filled]  
99214 - Clinic Est Level 4

Given that she has been dealing with the ankle and knee pain for approximately 1 year recommend conservative treatments with HEP, strength and stretching exercises. Incidentally, I noticed indentations indicative of tying her bruits too tightly in her skin Which prompted an inspection of the soles of her boots which were severely degraded which is likely contributing to her knee and ankle pain. Strongly encouraged her to purchase new boots and new running shoes at regular intervals to avoid asymmetrical wearing patterns which may worsen her musculoskeletal pain. Patient agreed to this plan.

Regarding her acne, I recommend conservative treatment with benzoyl peroxide until the pregnancy is complete.

Concerning her skin tags recommend she make a follow-up appointment for consideration of removal.

She also has sustained tachycardia in the 120s. Both on this visit and previous visits she has been tachycardic. She is currently asymptomatic. Patient denies any crushing substernal chest pain, pain radiating into the left arm, into the jaw or between his shoulder blades. He denies any shortness of breath or sensations of impending doom. There are no concerning symptoms of cardiac involvement in this provider's opinion. Strongly recommend she schedule a follow-up with me or another PCM in order to address her sustained tachycardia. Also recommend she discuss it with OB/GYN. Patient agreed to this plan.

Ft. Riley, KS

### **History of Present Illness**

24 year old G2P1 presents for follow-up after a missed AB at 16.6 wks. Fetal demise was found in the ED on 12/20/22. She was transferred to KU for delivery. Chromosome analysis showed a normal male fetus. She states that all other testing returned normal/negative.

She feels that she is coping appropriately. She is established with BH here on post. She denies any SI or HI at this time.

She had a normal period on 1/27/23. She is concerned about a vaginal odor that she has noticed as well as urinary urgency. She denies any incontinence of urine. She denies an odor with urination, abnormal color of urine or cloudiness that she can see.

She states that she plans to wait a while before trying for another pregnancy. She would like to go back on OCP's for contraception.

### **Review of Systems**

A ten point review of systems performed, all negative or normal except which was stated above or in HPI.

## **Office and Clinic Notes**

### **Chief Complaint**

23 year old female presents to clinic for evaluation of her vaginal pressure and granulated tissue that was noted by Ms Kuntz CNM.

### **Assessment/Plan**

#### 1. Pelvic and perineal pain

Discussed that there were no physical examination findings that would prompt me to recommend surgery. Discussed that I agree with Ms. Kuntz's previous recommendation of pelvic floor physical therapy, for which a consult has already been placed. Discussed reintroduction of coitus, recommended copious lubrication and taking it slowly at first. Pt denies any further questions.

Julia Gaston, MD FACOG. IACH OB/GYN

### **History of Present Illness**

Ms. Amieva is a very pleasant 23 y.o. G1P1001 who is s/p SVD of a female infant on 03Dec2021. She recently presented for her postpartum exam where she expressed a concern regarding increased pelvic pressure. Today she reiterates that she feels pressure on the posterior wall of her vagina when seated and while defecating and urinating. She denies any pain with defecation or urination. She has not resumed penetrative intercourse but has had external stimulation which induced the pressure feeling as well. Her period just resumed two days ago.

Past medical, social, obstetric, gynecologic, social, and family histories were reviewed. There were no changes from her previous visit.

Medication reconciliation completed. The patient was offered a paper copy, but declined.

### **Review of Systems**

A 10 pt review of systems was completed and was negative except as noted in the HPI or below.

#### Pain

DVPRS Pain Scale: 0 - No pain (01/31/22)

Past Week DVPRS score: 0 - No pain (01/31/22)

### **Physical Exam**

#### Vitals & Measurements

**HR:** 76(Peripheral) **RR:** 16 **BP:** 109/71

**HT:** 171.0 cm **WT:** 89.53 kg(Dosing) **WT:** 89.53 kg(Measured) **BMI:** 30.62

#### Physical Examination

##### VSS

Gen: Well-Developed, Well-nourished, in no acute distress

HEENT: Normocephalic, Atraumatic, no scleral icterus

CV: No visible edema

Resp: Normal respiratory effort. Symmetric chest wall movements

Skin: Warm, dry, no visible lesions

Neuro: Normal gait and stature

GU: No lesions visible on mons pubis, labia majora or labia minora. Bartholin's and skenes glands are not enlarged. There are no polyps on the urethral meatus. The introitus is intact. Menstrual blood possibly obscures the mucosa however, I did not appreciate any granulation tissue. Posterior medial palpation reproduces the pressure. Palpation in the left and right sulchi produces discomfort, left apparently more than right. There is notable levator spasm during this palpation.

### **Problem List/Past Medical History**

Referral Request 2.0 - Completed

-- 01/12/2022 15:29:00 CST, Medical Service Physical Therapy, Refer to Mathis Rehab, Manhattan, KS for pelvic floor PT related to pelvic pain/pressure postpartum as well as abdominal PT for diastasis recti. Thank you., Evaluate and Treat, Diastasis recti...

### **History of Present Illness**

S: Patient is here for her postpartum exam.

23 y/o female G1 now P1001 here for postpartum check up. She was admitted in spontaneous labor on 2 Dec 2021 at 40.0 wks and augmented with amniotomy. She progressed to complete dilation and effected the NSVD of a viable female neonate attended by Dr. Gaston. Baby delivered in OP presentation. A vaginal wall laceration was noted and repaired. She feels that her laceration either opened up or didn't heal well. She c/o vaginal pressure/pain when sitting too long or prolonged periods on the toilet.

--Lochia: Bright red bleeding this past saturday/sunday. She only bled for 3-4 weeks, then stopped until this weekend.

c/o vaginal soreness when trying to void, feels like laceration is opening up.

--Feeding: Breastfeeding full time.

--Intercourse: Not resumed

--Contraception- Has minipill but not started. Considering an IUD.

--Moods- EPDS 9/30,

--GDM or GHTN complicating pregnancy: No

--No unexplained vaginal bleeding

--Work- Active Duty but currently on leave.

Gyn Hx: Monthly menses prior to pregnancy. pap smear: Nml May 2021- Due again May 2024.

Past medical and surgical history reviewed. Hirsutism on chest/breasts.

Social Hx: Married Active Duty, getting out of Army this year.

spouse/FOB: supportive

Ms. Amieva is a 24yo G2P1 at 14+6w gestation diagnosed with a subchorionic hemorrhage that appeared to be about 50% the size of her gestational sac at 12weeks gestation. Subchorionic hemorrhage had reduced in size during her 14week visit, approximately 25% the size of her gestational sac. Fetus with active movement, normal FCA with pregnancy well positioned in near the uterine fundus. She presented to the ED twice for evaluation of spotting and brown discharge on 05 and 06 DEC with plan on 06DEC to refer to MFM for evaluation.

Pt contacted and provided reassurance, especially given previous US findings, minimal spotting, as well as normal FCA on evaluation in ED. Discussed that she will continue to have spotting while the subchorionic hemorrhage is present, and that this will be her new "normal."

I provided encouragement to stay positive and that many patients with this finding carry to term, though it is hard to predict if a negative outcome will occur. I understand that given the increased risk for miscarriage and preterm delivery, it may be difficult. Discussed that heavy period-like vaginal bleeding, passing large clots, and intense cramping pain may be signs that something is changing or miscarriage is occurring and she should go to the ED immediately for evaluation at that time. Unfortunately, besides pelvic rest there are no interventions that can be performed for a subchorionic hemorrhage/ hematoma. Pt was informed that we are putting in the referral to MFM today for repeat US and evaluation with plan for growth scan in the 3rd trimester.

Patient Name: **Amieva, Yessenia**

subchorionic hemorrhage, which appears to be resolving. Discussed that their presence is associated with increase risk of miscarriage, especially given larger size, though many patients with this diagnosis carry to term. Discussed that normal heart rate, active FM, no VB or cramping, and decreasing size are all reassuring features. Recommend pelvic rest until 20week anatomy scan.

**Ordered:**

AFP, Serum, Open Spina Bifida LC018256

US OB 2nd/3rd Trimester Fetal Survey

Referral Request 2.0

**Orders:**

GC and Chlamydia Screen

- Vital signs review does not show history of elevated BP
- Pt with history of COVID in pregnancy and large subchorionic hemorrhage, recommend growth scan in third trimester
- Prenatal labs not yet performed, pt to obtain today
- GC/CT collected today, will contact the patient with any abnormal results
- Pt is UTD on PAP smear, NILM May2021
- Discussed weight gain in pregnancy, given her prepregnancy BMI of 30, her appropriate weight gain is 11-20lbs
- Briefly discussed genetic screening; patient desires referral to Topeka
- Pt desires AFP for evaluation of neural tube defects, order placed and patient to obtain after 15 ega
- Reviewed medications safe in pregnancy, and where to find that information in the "purple book" and DoD pregnancy app
- First trimester return precautions given
- Return to clinic for ROB visit in 4 weeks
- pt provided copy of her pregnancy profile
- ED/ L&D return precautions reviewed
- Patient indicated understanding, and all questions were answered

27 y/o G 2P 1 EDD 06-01-23 based off ultrasound . Pt would like MFM Referral or MT21 testing. Patient is not interested in Centering. NOB scheduled for with Dr Valenzuela on 12-1-22. Pt was Reminded to complete labs prior to next appointment. Pt plans to have labs drawn before appt tomorrow. Pre-admission paperwork given, patient instructed to go to PAD after appointment. Safe OTC medications and OTC medication to avoid in pregnancy discussed. Pt understands that if she develops urgent pregnancy concerns under 20 weeks to report to the emergency room, if over 20 week to report to Labor and Delivery. This interview was performed per telehealth and pt will be given her education and resource numbers at her appt tomorrow. Pt will also be given QR card for the Purple book tomorrow at her apt. Pt did have concerns that when she had her Lap Choley that she was very early pregnant, HCG prior to surgery was neg, she wants to know if there will be any effects to baby. She also during that time was in XRAY room with dtr when she had a chest xray, pt was given a lead gown and she had it on in the appropriate manner. Pt given reassurance and she would like to discuss this also with the doctor. Pt was Positive for Covid on 11-24-22 and she is aware that she will need to wear a mask when she comes into the hospital and for her appt. She verbalized understanding. Pt also would like Dr Valenzuela to explain the subchronic hemorrhage she was dx with. She denied vaginal bleeding today.

Anesthesia Type: Epidural

### **Problem List/Past Medical History**

#### Ongoing

Ankle pain  
Cholelithiasis  
Diastasis recti  
Hirsutism  
Pain in right knee  
Pain of knee region  
Pain of right ankle joint  
Pelvic and perineal pain  
Pregnant  
Vaginal granulation tissue

#### Historical

Bells palsy of left side of face  
Childbirth education done  
Normal pregnancy in primigravida  
Other specified counseling  
Pregnant

### **Surgical History**

- Cholecystectomy Laparoscopy (No Laterality) (09/15/2022)

### **Social History**

## ***Office and Clinic Notes***

### **Chief Complaint**

centering 39 weeks and 5 days

### **Assessment/Plan**

1. Normal pregnancy in primigravida
2. Childbirth education done
3. Gestation period, 39 weeks

### **PLAN**

- We had a lengthy discussion about timing of IOL. She hopes to avoid IOL and would like to wait until 41 weeks for IOL. Calendar reviewed, next available after 41 wks is 12 Dec at 41.3 wks, tentatively scheduled for that date with the hope to move up if space becomes available. She will need Rpt SVE on 7 Dec and instructions. If still pregnant at 41 wks, needs NST/AFI on 9 Dec.

--Labor Precautions and Fetal Movement Counts discussed.

-Follicular boil noted on perineum which is now draining. Infection precautions discussed. Encouraged warm compresses to help drain.

--Patient verbalized understanding and had no further questions.

RTC x 1 wk.

#### **Chief Complaint**

f/u lap chole

#### **Imaging Results**

No qualifying data available.

#### **Assessment/Plan**

1. Postoperative visit

Healing well, discussed resumption of normal activity and chronic wound care. F/U prn

#### **History of Present Illness**

Patient presents for f/u after lap chole. She is tolerating a reg diet without N/V. She is having Bms without issues. No issues with her wounds.

#### **Review of Systems**

per HPI

#### **Physical Exam**

##### **Vitals & Measurements**

**T:** 36.7 °C (Oral) **HR:** 92(Peripheral) **RR:** 15 **BP:** 120/76 **SpO2:** 99%  
**HT:** 170 cm **WT:** 90.90 kg(Dosing) **WT:** 90.9 kg(Measured) **BMI:** 31.45

**Vitals:** Current vital signs reviewed.

#### **Problem List/Past Medical History**

##### **Ongoing**

Ankle pain  
Cholelithiasis  
Diastasis recti  
Hirsutism  
Pain in right knee  
Pain of knee region  
Pain of right ankle joint  
Pelvic and perineal pain  
Vaginal granulation tissue

##### **Historical**

Bells palsy of left side of face  
Childbirth education done  
Normal pregnancy in primigravida  
Other specified counseling

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Office and Clinic Notes***

### **Office and Clinic Notes**

## **Heart Attack Signs**

**Chest discomfort:** Most heart attacks involve discomfort in the center of the chest and lasts more than a few minutes, or goes away and comes back. It can feel like uncomfortable pressure, squeezing, fullness or pain.

**Discomfort in upper body:** Symptoms can include pain or discomfort in one or both arms, back, neck, jaw or stomach.

**Shortness of breath:** With or without discomfort.

**Other signs:** Breaking out in a cold sweat, nausea, or lightheaded.

Remember, **MINUTES DO MATTER.** If you experience any of these heart attack warning signs, call **9-1-1** to get immediate medical attention!

Act **FAST** and Check for these signs:

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### **Office and Clinic Notes**

**FACE**

Does the face look uneven?

**ARM**

Does one arm drift down?

**SPEECH**

Does their speech sound strange?

**TIME**

Call 9-1-1 at any sign of stroke

## **Heart Attack Signs**

**Chest discomfort:** Most heart attacks involve discomfort in the center of the chest and lasts more than a few minutes, or goes away and comes back. It can feel like uncomfortable pressure, squeezing, fullness or pain.

**Discomfort in upper body:** Symptoms can include pain or discomfort in one or both arms, back, neck, jaw or stomach.

**Shortness of breath:** With or without discomfort.

**Other signs:** Breaking out in a cold sweat, nausea, or lightheaded.

Remember, **MINUTES DO MATTER.** If you experience any of these heart attack warning signs, call **9-1-1** to get immediate medical attention!

# Ambulatory Visit Summary

## Your Diagnosis

Sore throat

## Tests Performed

Throat Culture -- Results Pending --

You will be contacted within 72 hours with your results.

## This Is Your Medications List - Only Take These Medications

- multivitamin, prenatal (Prenatal Multivitamins with Folic Acid 1 mg oral tablet)
- ocular lubricant (Refresh Plus ophthalmic solution)
- penicillin V potassium (penicillin V potassium 500 mg oral tablet)

## Discharge Vitals

**Temperature** (Oral)

37 °C

**Heart Rate** (Peripheral)

101

**Blood Pressure**

122/89

**Height**

170 cm

**Weight** (Dosing)

86.50 kg

**Weight** (Measured)

86.5 kg

**BMI**

29.93

## Allergies

No Known Allergies

## Problems

**Ongoing** - Any problem that you are currently receiving treatment for.

Ankle pain  
Cholelithiasis  
Diastasis recti  
Hirsutism  
Missed miscarriage  
Pain in right knee  
Pain of knee region  
Pain of right ankle joint  
Pelvic and perineal pain  
Vaginal granulation tissue

**Historical** - Any problem that you are no longer receiving treatment for.

Bells palsy of left side of face

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### ***Office and Clinic Notes***

Childbirth education done  
Normal pregnancy in primigravida  
Other specified counseling  
Pregnant  
Pregnant

## **These Are Your Overall Goals**

- maintain health

## **Common Emergency Awareness Tips**

IS IT A STROKE?

Act **FAST** and Check for these signs:

**FACE**

Does the face look uneven?

**ARM**

Does one arm drift down?

**SPEECH**

Does their speech sound strange?

**TIME**

Call 9-1-1 at any sign of stroke

## **Heart Attack Signs**

**Chest discomfort:** Most heart attacks involve discomfort in the center of the chest and lasts more than a few minutes, or goes away and comes back. It can feel like uncomfortable pressure, squeezing, fullness or pain.

**Discomfort in upper body:** Symptoms can include pain or discomfort in one or both arms, back, neck, jaw or stomach.

**Shortness of breath:** With or without discomfort.

**Other signs:** Breaking out in a cold sweat, nausea, or lightheaded.

Remember, **MINUTES DO MATTER**. If you experience any of these heart attack warning signs, call **9-1-1** to get immediate medical attention!

# Ambulatory Visit Summary

## Your Diagnosis

Gestation period, 14 weeks

Encounter for screening for infections with a predominantly sexual mode of transmission

## Tests Performed

GC and Chlamydia Screen -- Results Pending --

You will be contacted within 72 hours with your results.

## Discharge Vitals

**Heart Rate** (Peripheral)

91

**Blood Pressure**

110/75

**Height**

171.0 cm

**Weight** (Measured)

87.22 kg

**Weight** (Dosing)

87.22 kg

**BMI**

29.83

## This Is Your Medications List - Only Take These Medications

- multivitamin, prenatal (Prenatal Multivitamins with Folic Acid 1 mg oral tablet)
- ocular lubricant (Refresh Plus ophthalmic solution)

## Allergies

No Known Allergies

## Problems

**Ongoing** - Any problem that you are currently receiving treatment for.

Ankle pain  
Cholelithiasis  
Diastasis recti  
Hirsutism  
Pain in right knee  
Pain of knee region  
Pain of right ankle joint  
Pelvic and perineal pain  
Pregnant  
Vaginal granulation tissue

**Historical** - Any problem that you are no longer receiving treatment for.

Bells palsy of left side of face  
Childbirth education done  
Normal pregnancy in primigravida  
Other specified counseling  
Pregnant

## Common Emergency Awareness Tips

IS IT A STROKE?

Act **FAST** and Check for these signs:

**FACE**

Does the face look uneven?

**ARM**

Does one arm drift down?

**SPEECH**

Does their speech sound strange?

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### **Office and Clinic Notes**

**TIME**

Call 9-1-1 at any sign of stroke

## **Heart Attack Signs**

**Chest discomfort:** Most heart attacks involve discomfort in the center of the chest and lasts more than a few minutes, or goes away and comes back. It can feel like uncomfortable pressure, squeezing, fullness or pain.

**Discomfort in upper body:** Symptoms can include pain or discomfort in one or both arms, back, neck, jaw or stomach.

**Shortness of breath:** With or without discomfort.

**Other signs:** Breaking out in a cold sweat, nausea, or lightheaded.

Remember, **MINUTES DO MATTER.** If you experience any of these heart attack warning signs, call **9-1-1** to get immediate medical attention!

## **These Are Your Overall Goals**

HEALTHY PREGNANCY AND DELIVERY

## **Education Materials**

### **Second Trimester of Pregnancy**

The second trimester of pregnancy is from week 13 through week 27. This is also called months 4 through 6 of pregnancy. This is often the time when you feel your best.

During the second trimester:

- Morning sickness is less or has stopped.
- You may have more energy.
- You may feel hungry more often.

At this time, your unborn baby (fetus) is growing very fast. At the end of the sixth month, the unborn baby may be up to 12 inches long and weigh about 1½ pounds. You will likely start to feel the baby move between 16 and 20 weeks of pregnancy.

#### **Body changes during your second trimester**

Your body continues to go through many changes during this time. The changes vary and generally return to normal after the baby is born.

#### **Physical changes**

- You will gain more weight.
- You may start to get stretch marks on your hips, belly (abdomen), and breasts.
- Your breasts will grow and may hurt.
- Dark spots or blotches may develop on your face.
- A dark line from your belly button to the pubic area (linea nigra) may appear.
- You may have changes in your hair.

#### **Health changes**

- You may have headaches.
- You may have heartburn.
- You may have trouble pooping (constipation).
- You may have hemorrhoids or swollen, bulging veins (varicose veins).
- Your gums may bleed.
- You may pee (urinate) more often.
- You may have back pain.

#### **Follow these instructions at home:**

##### **Medicines**

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Office and Clinic Notes***

- Take over-the-counter and prescription medicines only as told by your doctor. Some medicines are not safe during pregnancy.
- Take a prenatal vitamin that contains at least 600 micrograms (mcg) of folic acid.

### **Eating and drinking**

- Eat healthy meals that include:
  - Fresh fruits and vegetables.
  - Whole grains.
  - Good sources of protein, such as meat, eggs, or tofu.
  - Low-fat dairy products.
- Avoid raw meat and unpasteurized juice, milk, and cheese.
- You may need to take these actions to prevent or treat trouble pooping:
  - Drink enough fluids to keep your pee (urine) pale yellow.
  - Eat foods that are high in fiber. These include beans, whole grains, and fresh fruits and vegetables.
  - Limit foods that are high in fat and sugar. These include fried or sweet foods.

### **Activity**

- Exercise only as told by your doctor. Most people can do their usual exercise during pregnancy. Try to exercise for 30 minutes at least 5 days a week.
- Stop exercising if you have pain or cramps in your belly or lower back.
- **Do not** exercise if it is too hot or too humid, or if you are in a place of great height (high altitude).
- Avoid heavy lifting.
- If you choose to, you may have sex unless your doctor tells you not to.

### **Relieving pain and discomfort**

- Wear a good support bra if your breasts are sore.
- Take warm water baths (sitz baths) to soothe pain or discomfort caused by hemorrhoids. Use hemorrhoid cream if your doctor approves.
- Rest with your legs raised (elevated) if you have leg cramps or low back pain.
- If you develop bulging veins in your legs:
  - Wear support hose as told by your doctor.
  - Raise your feet for 15 minutes, 3–4 times a day.
  - Limit salt in your food.

### **Safety**

- Wear your seat belt at all times when you are in a car.
- Talk with your doctor if someone is hurting you or yelling at you a lot.

### **Lifestyle**

- **Do not** use hot tubs, steam rooms, or saunas.
- **Do not** douche. **Do not** use tampons or scented sanitary pads.
- Avoid cat litter boxes and soil used by cats. These carry germs that can harm your baby and can cause a loss of your baby by miscarriage or stillbirth.
- **Do not** use herbal medicines, illegal drugs, or medicines that are not approved by your doctor. **Do not** drink alcohol.
- **Do not** smoke or use any products that contain nicotine or tobacco. If you need help quitting, ask your doctor.

### **General instructions**

- Keep all follow-up visits. This is important.
- Ask your doctor about local prenatal classes.
- Ask your doctor about the right foods to eat or for help finding a counselor.

### **Where to find more information**

- American Pregnancy Association: [americanpregnancy.org](http://americanpregnancy.org)
- American College of Obstetricians and Gynecologists: [www.acog.org](http://www.acog.org)
- Office on Women's Health: [womenshealth.gov/pregnancy](http://womenshealth.gov/pregnancy)

### **Contact a doctor if:**

- You have a headache that does not go away when you take medicine.
- You have changes in how you see, or you see spots in front of your eyes.
- You have mild cramps, pressure, or pain in your lower belly.
- You continue to feel like you may vomit (nauseous), you vomit, or you have watery poop (diarrhea).
- You have bad-smelling fluid coming from your vagina.
- You have pain when you pee or your pee smells bad.
- You have very bad swelling of your face, hands, ankles, feet, or legs.
- You have a fever.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPR): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

### **Office and Clinic Notes**

#### **Get help right away if:**

- You are leaking fluid from your vagina.
- You have spotting or bleeding from your vagina.
- You have very bad belly cramping or pain.
- You have trouble breathing.
- You have chest pain.
- You faint.
- You have not felt your baby move for the time period told by your doctor.
- You have new or increased pain, swelling, or redness in an arm or leg.

#### **Summary**

- The second trimester of pregnancy is from week 13 through week 27 (months 4 through 6).

• Eat healthy meals.

• Exercise as told by your doctor. Most people can do their usual exercise during pregnancy.

• **Do not** use herbal medicines, illegal drugs, or medicines that are not approved by your doctor. **Do not** drink alcohol.

• Call your doctor if you get sick or if you notice anything unusual about your pregnancy.

This information is not intended to replace advice given to you by your health care provider. Make sure you discuss any questions you have with your health care provider.

### ***Office and Clinic Notes***

#### **OS: CooperVision/Biofinity/8.6/14.0/-3.00**

Patient Education: Contact Lenses: Patient expressed understanding of proper care of contact lenses and the risks of infection due to improper care or over wear of contact lenses, and to return to clinic if any visual symptoms/signs arises; patient instructed to not sleep, shower, or swim in contact lenses, to always wash hands thoroughly before handling lenses, and to not use water for rinsing or rewetting the lenses. Discussed importance of bringing CL and boxes or CLRX to yearly eye exams in order to renew CLRX.

Patient educated regarding 40-506 regulation: No contact lens wear while in the field, during combat operations, deployments, or gas chamber exercises. Patient verbalized understanding.

#### **Obstetric History**

Gravida: 1

#### **Delivery Documentation**

Delivery Type: Spontaneous Vaginal Delivery

Position: OP

Laceration: Right vaginal wall

Laceration Repair: 2-0 vicryl

Amniotic Fluid: Meconium

Amniotic Fluid Describe: Meconium

Placenta: Spontaneous

Placental Inspection: Intact

Uterus Explored: No

No qualifying data available.

#### **Blood Loss**

Quantitative Blood Loss: 470 mL (12/03/21 06:31:00)

#### **Comments**

The patient progressed to complete dilation. With excellent maternal effort the patient effected the delivery of a viable female neonate. Head delivered OP , restituted ROP. There was no difficulty delivering the anterior or posterior shoulder. The infant was delivered to the maternal abdomen. Cord clamping was delayed for approximately 60 seconds, then the cord was doubly clamped by the MD and cut by the FOB. The placenta delivered, was inspected and was found to be intact. An inspection of the vagina and perineum revealed a vaginal wall laceration. This was repaired with 2-0 Vicryl . Mother and infant tolerated the delivery well.

QBL 470 mL

Counts correct.

Julia Gaston, MD FACOG, IACH OBGYN

#### **Neonatal Information**

Umbilical Cord Description: 3 vessel cord

#### **Medications**

Bicitra, 30 mL, Oral, Once , If needing to go to C/S

Dermoplast topical spray, 1 spray(s), Topical, QID, PRN , Spray on perineum for perineal pain

docusate, 100 mg= 1 cap(s), Oral, every 12 hr

docusate sodium 100 mg oral capsule, 100 mg= 1 cap(s), Oral, every 12 hr

ferrous sulfate (iron sulfate), 325 mg= 1 tab(s), Oral, Daily , When tolerating PO

ferrous sulfate 325 mg (65 mg elemental iron) oral tablet, 325 mg= 1 tab(s), Oral, Daily

ibuprofen, 800 mg= 1 tab(s), Oral, every 8 hr, PRN , For cramping. Pt may refuse.

ibuprofen 800 mg oral tablet, 800 mg= 1 tab(s), Oral, every 8 hr, PRN

lactated ringers bolus, 1000 mL, IV Piggyback (Intravenous), Once , When calling for epidural placement

magnesium hydroxide/aluminum hydroxide/simethicone 400 mg-400 mg-40 mg/5 mL oral suspension, 10 mL, Oral, BID, PRN

Prenatal Multivitamins with Folic Acid 1 mg oral tablet, 1 tab(s), Oral, every morning

Prenatal Multivitamins with Folic Acid 1 mg oral tablet, 1 tab(s), Oral, Daily, 3 refills

ropivacaine IV additive 200 mg + sodium chloride 0.9% for epidural 100 mL

simethicone, 125 mg, Oral, QID, PRN

Tylenol, 650 mg= 2 tab(s), Oral, every 4 hr, PRN , May give ONE additional dose if patient remains with Mild pain at re-assessment within 1 hr. If repeat dose ineffective, notify provider.

Tylenol 325 mg oral tablet, 650 mg= 2 tab(s), Oral, every 4 hr, PRN

witch hazel 50% topical pad, 1 appl(s), Topical, every 2 hr, PRN , For perineal pain or hemorrhoidal discomfort. May keep medication at bedside

Taken	Rec	
GALLBLADDER	9/15/2022 11:56	9/20/2022 14:03

### Final Diagnosis

Gallbladder, Cholecystectomy:

- Chronic cholecystitis.
- Cholelithiasis.

\*\*\*Electronically Signed \*\*\*

bsg/9/24/2022 CPT Brittney S. Graham, DO

### Clinical Diagnosis and History

Patient woke in the middle of the night last Friday with back pain. Soon the pain radiated to the front of her belly. She felt there was pain across her upper abdomen that seemed to be worse than the back pain. The back pain was still there.

### Pre-Operative Diagnosis

Cholelithiasis.

### Post-Operative Diagnosis

Cholelithiasis.

### Gross Description

Patient Name: **Amieva, Yessenia**

### ***Pathology Report***

"Amieva, gallbladder," submitted in formalin is an intact and distended gallbladder measuring 13.5 cm in length, 3.0 cm in diameter at the neck, and 4.0 cm in diameter at the fundus. The serosal surface is gray to purple, smooth, and dull. The lumen contains a copious amount of watery and cloudy yellow to gray bile. Present within the lumen of the gallbladder is a 2.0 cm bosselated yellow-orange calculus. The mucosal surface is gray to pink and trabeculated. A mucosal mass or polyp is not grossly identified. The wall of the gallbladder ranges in thickness from 0.1 to 0.3 cm. The cystic duct is 1.0 cm in length x 0.8 cm in average diameter. Representative sections of the gallbladder to include a shave of the cystic duct resection margin are submitted in cassette A1. 1SS.

## Pregnancy Summary

### Gestational Age (EGA) and EDD

EDD: 06/01/2023 EGA\*: 17 weeks 6 days

Type: Authoritative

Method Date: 11/18/2022

Method: Ultrasound (11/18/2022)

Confirmation: Confirmed

Description: --

Comments: There is a complex hypoechoic heterogeneous structure lower uterine segment measuring 4.4 x 4.4 x 3.2 cm most consistent with a subchorionic bleed.

IMPRESSION: Single live intrauterine gestation corresponding with 12 weeks and 1 days.  
Large complex subchorionic bleed lower uterine segment, and consider short-term follow-up.

## **Pregnancy Summary**

### **carboxymethylcellulose 0.5% (PF) eye drops UD [50EA]**

SIG: 1 drop(s), Eye-Both, every 2 hr, PRN, 50 EA, 6 Refill(s)  
Ordered: 02/22/22 Provider: BAKER, ANGIE P, OD

### **naproxen 500 mg tablet**

SIG: 500 mg, Oral, BID, 20 EA, 0 Refill(s)  
Ordered: 03/03/22 Provider: MORRISON, SEAN M, PA

### **Prenatal Multivitamins with Folic Acid 1 mg oral tablet**

SIG: 1 tab(s), Oral, Daily, 100 tab(s), 3 Refill(s)  
Ordered: 07/06/21 Provider: KUNTZ, KYANNA SHELAR, CNM

### **Refresh Plus ophthalmic solution**

SIG: 1 drop(s), Eye-Both, every 2 hr, PRN: dry eyes, 50 EA, 6 Refill(s)  
Ordered: 02/22/22 Provider: BAKER, ANGIE P, OD

### Inactive or Suspended (Prescriptions and documented medications since 08/21/22)

#### **Bentyl 10 mg oral capsule**

SIG: 2 cap(s), Oral, QID, for 7 days, 30 to 60 minutes before meals, 56 cap(s), 0 Refill(s)  
Status: Discontinued Ordered: 09/02/22 Provider: INGLE, STEPHEN JEROME, DO

#### **Colace 100 mg oral capsule**

SIG: 1 cap(s), Oral, BID, 30 cap(s), 0 Refill(s)  
Status: Discontinued Ordered: 09/15/22 Provider: KEEFE, PATRICIA ANNE, MD

#### **dicyclomine 10 mg capsule**

SIG: 20 mg, Oral, QID, 56 EA, 0 Refill(s)  
Status: Discontinued Ordered: 09/02/22 Provider: INGLE, STEPHEN JEROME, DO

#### **docusate sodium 100 mg capsule**

SIG: 100 mg, Oral, BID, 30 EA, 0 Refill(s)  
Status: Discontinued Ordered: 09/15/22 Provider: KEEFE, PATRICIA ANNE, MD

#### **oxyCODONE-acetaminophen 5 mg-325 mg tablet**

SIG: 1 tab(s), Oral, every 4 hr, 20 EA, 0 Refill(s)  
Status: Discontinued Ordered: 09/15/22 Provider: KEEFE, PATRICIA ANNE, MD

#### **Percocet 5 mg-325 mg oral tablet**

SIG: See Instructions, take one or two every 4 hours as needed or pain, 20 tab(s), 0 Refill(s)  
Status: Discontinued Ordered: 09/15/22 Provider: KEEFE, PATRICIA ANNE, MD

#### **Zofran ODT 4 mg oral tablet, disintegrating**

SIG: 1 tab(s), Oral, every 6 hr, PRN: nausea/vomiting, 20 tab(s), 0 Refill(s)  
Status: Completed Ordered: 12/12/22 Provider: SKINNER, ADAM M, MD

## **Medication Administrations In-Office/Hospital**

(All in-office/hospital administrated medications ordered since 08/21/22)

#### **acetaminophen**

N/A, Once  
Status: Completed Ordered: 09/15/22 Provider: CONTRIBUTOR\_SYSTEM, RxHub

#### **bupivacaine PF 0.25% (bupivacaine)**

N/A, Once  
Status: Completed Ordered: 09/15/22 Provider: CONTRIBUTOR\_SYSTEM, RxHub

#### **dexamethasone**

N/A, Once  
Status: Completed Ordered: 09/15/22 Provider: CONTRIBUTOR\_SYSTEM, RxHub

#### **dexamethasone (ANES) (dexamethasone 4 mg/mL 1 mL vial)**

IV Push (Intravenous), Once  
Status: Completed Ordered: 09/15/22 Provider: ARMSTRONG, DENNIS W

#### **Diprivan (ANES) (propofol 10 mg/mL 20 mL vial)**

IV Push (Intravenous), Once  
Status: Completed Ordered: 09/15/22 Provider: ARMSTRONG, DENNIS W

#### **emollients, topical**

N/A, Once  
Status: Completed Ordered: 09/15/22 Provider: CONTRIBUTOR\_SYSTEM, RxHub

#### **fentaNYL (fentanyl)**

N/A, Once  
Status: Completed Ordered: 09/15/22 Provider: CONTRIBUTOR\_SYSTEM, RxHub

#### **fentaNYL (fentanyl)**

N/A, Once  
Status: Completed Ordered: 09/15/22 Provider: CONTRIBUTOR\_SYSTEM, RxHub

#### **fentaNYL (ANES) (fentaNYL 50 mcg/mL 2 mL injection)**

IV Push (Intravenous), Once  
Status: Completed Ordered: 09/15/22 Provider: O'DONNELL, MAEVLYN, CRNA

#### **fentaNYL (ANES) (fentaNYL 50 mcg/mL 2 mL injection)**

IV Push (Intravenous), Once  
Status: Completed Ordered: 09/15/22 Provider: ARMSTRONG, DENNIS W

#### **ketorolac**

N/A, Once  
Status: Completed Ordered: 09/02/22 Provider: CONTRIBUTOR\_SYSTEM, RxHub

#### **lactated ringers bolus (lactated ringers)**

## **Pregnancy Summary**

### **Physical Exams**

#### **Physical Exam**

##### Mental Status

Level of Consciousness: **Alert** (12/05/21)  
Orientation Assessment: **Oriented x 4** (12/05/21)  
Affect/Behavior: **Appropriate, Calm, Cooperative** (12/05/21)  
Distress: **None** (12/02/21)

##### HEENT

Left Ear Symptoms: **None** (12/02/21)  
Right Ear Symptoms: **None** (12/02/21)  
Left Nostril Symptoms: **None** (12/02/21)  
Right Nostril Symptoms: **None** (12/02/21)

##### Cardiovascular

Cardiovascular Symptoms: **None** (12/05/21)  
Nail Bed Color: **Normal for ethnicity** (12/02/21)  
Heart Rhythm: **Regular** (12/05/21)

##### Respiratory

Respiratory Symptoms: **None** (12/05/21)  
Respirations: **Unlabored** (12/05/21)  
Respiratory Pattern: **Regular** (12/05/21)  
Oxygen Therapy: **Room air** (12/05/21)  
SpO2: **99 %** (12/02/21)  
Cough: **None** (12/05/21)  
All Lobes Breath Sounds: **Clear** (12/05/21)

##### Gastrointestinal

GI Symptoms: **None** (12/05/21)  
Appetite: **Good** (12/05/21)  
Abdomen Description: **Rounded** (12/05/21)  
Abdomen Palpation: **Soft, Non-Tender** (12/05/21)  
Bowel Sounds All Quadrants: **Active** (12/05/21)  
Passing Flatus: **Yes** (12/05/21)

##### Extremities

Clonus: **Not present** (12/05/21)

##### Edema

Edema: **Generalized edema, Ankle, Pedal** (12/05/21)  
Generalized Edema: **1+ Trace** (12/05/21)

##### Ankle

Left Ankle Edema: **2+ Slight** (12/05/21)  
Right Ankle Edema: **2+ Slight** (12/05/21)

##### Pedal

Left Pedal Edema: **2+ Slight** (12/05/21)  
Right Pedal Edema: **2+ Slight** (12/05/21)

##### Reflexes

Left Knee Reflex: **2+** (12/04/21)  
Right Knee Reflex: **2+** (12/04/21)

##### Integumentary

Skin Color General: **Usual for ethnicity** (12/05/21)  
Skin Description: **Dry** (12/02/21)

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## Pregnancy Summary

Skin Temperature: Warm (12/05/21)

Skin Turgor: Elastic (12/05/21)

Skin Moisture General: Normal (12/05/21)

Skin Integrity: Intact, no abnormalities (12/02/21)

Mucous Membrane Color: Pink (12/05/21)

Mucous Membrane Description: Moist, Intact (12/02/21)

AMIEVA, YESSENIA DOB: 05/19/98

## Blood Types and Anti-D Immune Globulin

## Medications

### Prescriptions and Home Medications

Currently Active or Taking

acetaminophen 325 mg tablet

SIG: 650 mg, Oral, every 4 hr, PRN, 100 EA, 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

cephalexin 500 mg capsule

SIG: 500 mg, Oral, QID, 28 EA, 0 Refill(s)  
Ordered: 08/31/21 Provider: KUNTZ, KYANNA SHELAR, CNM

docusate sodium 100 mg capsule

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## **Pregnancy Summary**

SIG: 100 mg, Oral, every 12 hr, 60 EA, 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**docusate sodium 100 mg oral capsule**

SIG: 1 cap(s), Oral, every 12 hr, 60 cap(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ferrous sulfate 325 mg (65 mg elemental iron) oral tablet**

SIG: 1 tab(s), Oral, Daily, 30 tab(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ferrous sulfate 325 mg tablet**

SIG: 325 mg, Oral, Daily, 30 EA, 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ibuprofen 800 mg oral tablet**

SIG: 1 tab(s), Oral, every 8 hr, PRN: pain (mild), 90 tab(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ibuprofen 800 mg tablet**

SIG: 800 mg, Oral, every 8 hr, PRN, 90 EA, 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**Nora-BE (norethindrone) 0.35 tablet (28)**

SIG: 0.35 mg, Oral, Daily, 84 EA, 1 Refill(s)  
Ordered: 12/05/21 Provider: CHAFFIN, KIMBERLY ANN

**Ortho Micronor 0.35 mg oral tablet**

SIG: 1 tab(s), Oral, Daily, 84 tab(s), 1 Refill(s)  
Ordered: 12/05/21 Provider: CHAFFIN, KIMBERLY ANN

**prenatal multivitamins w/Folic Acid 1 mg tablet**

SIG: 1 tab(s), Oral, Daily, 100 EA, 3 Refill(s)  
Ordered: 07/13/21 Provider: KUNTZ, KYANNA SHELAR, CNM

**Prenatal Multivitamins with Folic Acid 1 mg oral tablet**

SIG: 1 tab(s), Oral, Daily, 100 tab(s), 3 Refill(s)  
Ordered: 07/06/21 Provider: KUNTZ, KYANNA SHELAR, CNM

**Tylenol 325 mg oral tablet**

SIG: 2 tab(s), Oral, every 4 hr, PRN: pain (mild), 100 tab(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

Inactive or Suspended (Prescriptions and documented medications since 11/25/20)

**benzoyl peroxide 2.5% topical liquid**

SIG: 1 appl(s), Topical, BID, 240 mL, 0 Refill(s)  
Status: Discontinued Ordered: 08/23/21 Provider: DRUMMOND, THOMAS JOSEPH, PA

**benzoyl peroxide 5% topical liquid [148g]**

SIG: 1 appl(s), Topical, BID, 148 g, 0 Refill(s)  
Status: Discontinued Ordered: 08/23/21 Provider: DRUMMOND, THOMAS JOSEPH, PA

**carboxymethylcellulose 0.5% (PF) eye drops UD [50EA]**

SIG: 1 drop(s), Eye-Both, TID, PRN, 50 EA, 11 Refill(s)  
Status: Discontinued Ordered: 07/13/21 Provider: HART, RUSSELL W, OD

**Keflex 500 mg oral capsule**

SIG: 1 cap(s), Oral, QID, for 7 days, 28 cap(s), 0 Refill(s)  
Status: Completed Ordered: 08/31/21 Provider: KUNTZ, KYANNA SHELAR, CNM

**Prenatal 1 (Historically recorded)**

SIG: 0 Refill(s)  
Status: Discontinued Ordered: 05/06/21 Provider: --

**Refresh Plus ophthalmic solution**

SIG: 1 drop(s), Eye-Both, TID, PRN: dry eyes, 50 EA, 11 Refill(s)  
Status: Discontinued Ordered: 07/13/21 Provider: HART, RUSSELL W, OD

**Unisom 25 mg oral tablet**

SIG: 1 tab(s), Oral, every day at bedtime, 120 tab(s), 1 Refill(s)  
Status: Completed Ordered: 05/06/21 Provider: LONG, JEFFERY R, MD

**Vitamin B6 50 mg oral tablet**

## **Delivery Summary**

### **Baby A**

#### Membrane Status Information

ROM Date/Time: 12/03/21 00:56:00  
ROM Type: Artificial rupture of membranes  
Amniotic Fluid Color/Description: Clear  
Premature Rupture of Membranes: No  
Prolonged Rupture of Membranes: No

#### Labor Information

Length of Labor 2nd Stage Hrs Calc: 3.03 hr  
Length of Labor 2nd Stage: 182 minutes  
Length of Labor 3rd Stage: 4 minutes  
Labor Onset Methods: Spontaneous  
Precipitous Labor: No  
Prolonged Labor: No

#### Fetal Monitoring

FHR Monitoring Method: Telemetry

#### Delivery Information

Delivery Type: Vaginal  
Delivery of Head Date/Time: 12/03/21 05:49:00  
Date/Time of Birth: 12/03/21 05:49:00  
Placenta Delivery Date/Time: 12/03/21 05:53:00  
Placenta to Pathology: No  
Anesthetist: PLATZ, KELLIE M, DO  
Maternal Delivery Complications: None  
Delivery Physician: GASTON, JULIA, MD

#### Neonatal Information

Risk Factors: Meconium stained  
Neonate Complications: Meconium stained fluid  
Umbilical Cord Description: 3 vessel cord

#### Infant Data

Gender: Female  
ID Band Number: 92030  
Neonate Outcome: Live birth  
Security Tag Number: 675  
Birth Weight: 3.835 kg  
Apgar Score 1 Minute: 8  
Apgar Score 5 Minute: 9  
Pediatrician: CONROY, MELISSA J, DO

#### **Chief Complaint**

Core weakness and low back pain

#### **Subjective/History of Present Illness**

Pt c/o core weakness and back pain. Pt experienced pregnancy loss and benefits from this class to regain strength.

#### **Objective/Physical Exam**

Pt participated in a 45 minute group session of ther ex to include:

1. Diaphragm breathing
2. Contract and release of pelvic floor muscles with breath.
3. Transverse abdominis engagement
4. Hip stability and core control with single leg movement isolation
5. Adductor engagement
6. Plank progression

#### **Assessment/Plan**

Muscle weakness

Pt tolerated tx session well. Pt will implement appropriate daily exercises and attend next session

## ***Rehabilitation Notes***

### **ASSESSMENT**

**Diagnostic Hypothesis:** Mechanical Low Back Pain

**Impression:** 24y/o ADF ~ 10 weeks pregnant though according to pnt, may have a miscarriage (told she appeared 6 weeks pregnant on most recent ultrasound). No red flags, no radicular symptoms. Unknown MOI. Exam is unremarkable. Pnt would like to come into clinic prior to ETSing in JUN 2023.

**Rehab Potential:** Good

**Goals:**

STGs:

- 1) Lx Extension without pain x 4 weeks
- 2) 50% subjective report of decrease in symptoms x 4 weeks

LTGs:

- 1) Pnt is confident in ability to self-manage symptoms x 8 weeks

### **PLAN**

Follow-up with therapist in 4wks to reassess. HEP as above. In-clinic.

### **In-Clinic Exercises:**

- 1.) ADIM with functional transfer progression to squats
- 2.) Squats/Lunges with Pelvic Tilt Control
- 3.) Bird-Dogs with ADIM
- 4.) Dead Bugs with ADIM
- 5.) Glute Bridges
- 6.) Planks

### **Chief Complaint**

Bilateral knee and ankle pain R>L ankle pain L>R knee pain

### **Subjective/History of Present Illness**

The pt reports 4/10 bilateral knee and ankle pain before and after therapy today. Pt was 7 minutes late to the appointment.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## **Rehabilitation Notes**

### **Objective/Physical Exam**

The pt was instructed in the following therapeutic exercises today:

Heel taps, 6" 2x12 bil  
Total Gym DL squats 2x15 Lv 23  
Side Steps and backward Monster Walks 4x25ft ea, RTB  
Seated HS stretch, 1x45" bil  
Quad stretch 1x45" bil  
HF stretch 1x45" bil

Total treatment time: 25 min

Pain before and after treatment: 4/10

### **Assessment/Plan**

1. Pain of knee region

The pt had good tolerance for the exercises. Will cont per POC.

Diagnosis: **1.** Pain of knee region

## **Rehabilitation Notes**

Pt. returns for re-evaluation of her bilateral knee and ankle pain. She has only attended 1 therapy session in the past month. Discussed that consistent attendance is important to see improvement in strength to assist her with her pain. Will have her attend intermediate rehab 1-2x/week for 4 weeks then follow up for likely d/c to independent HEP.

Pain of knee region  
Pain of right ankle joint  
Pelvic and perineal pain  
Vaginal granulation tissue

[1]

6 April 22: Pt. with good technique overall with exercises performed today and voiced decreased pain overall with exercises performed. [1] 4/11/2022 - The pt tolerated the session. Cues to avoid medial shifting of her knees during SL TG squats. Cont per POC. [1]

4/13/2022 - Pt. voiced light ankle lateral malleoli/peroneal tendon pain R>L by the end of the session. Min cues to avoid knee vagus and to keep hip level with heel taps off 6" step. [1]

4/18/2022 - The pt had good tolerance for the exercises overall, with some left knee pain noted during the TG squats, and some right ankle pain during the resisted eversion. Cont pr POC.

**Assessment/Plan**

1. Pain of right ankle joint

A) See flow sheet.

## **Rehabilitation Notes**

### **Chief Complaint**

Bilateral knee and ankle pain R>L ankle pain L>R knee pain

### **Assessment/Plan**

Narrative summary: Examination consistent with bilateral PFPS and ankle pain secondary to increased pronation of bilateral feet and genu recurvatum. Will benefit from physical therapy for LE strengthening and stability. Dispensed OTS arch supports. Attend therapy 2x/week for 4 weeks then follow up.

Prognosis: Good

### **TREATMENT**

- 1) Patient education: Pt. advised to avoid bending, prolonged sitting, and heavy lifting. Educated patient on centralization/peripheralization and proper sitting posture.

Patient educated on assessment, treatment options, risk, plan of care, benefits/goals of skilled PT intervention, prognosis, and importance of long-term self-management of condition.

Response to treatment: Pt tolerated evaluation and treatment with minimal increase in symptom response.

### **GOALS**

Short-term goal(s):

- 1) Pt will be independent and compliant with HEP by first follow-up.
- 2) Pt. to report decreased pain and increased ROM by first follow-up

Long-term goal(s):

- 1) Knee AROM/PROM full and painfree within 6weeks
- 2) Pt will be able to return to full participation in Unit PT with minimal complaint of pain by 8 weeks.

.

### **PLAN**

- 1) Pt. will perform HEP and follow up in 2 weeks
- 3) Pt will perform HEP to address impairments.
- 4) Assess pt for discharge from physical therapy when goals are met or maximum benefit is attained.

Pt indicates understanding and concurs with plan of action, consents to examination and treatment.

Pt was informed that PT may not fully resolve dysfunction, and pain may not be relieved completely

#### **Medications Inactivated in the Last 72 Hours**

No medications found.

PMHX: Non-contributory

PSHX: None

#### **DISCHARGE DIAGNOSIS**

Chronic bilateral knee and ankle pain. Pt is roughly 3 mos postpartum. Had been seen previously for this issue but no therapy initiated at the time.

Has the patient had imaging for this complaint? No

Subjective\_1 year history of bilateral knee and ankle pain with insidious onset. Pain is in the anterior knees. Pain is in the medial ankle. No prior treatment for this issues. Denies buckling. Denies locking/catching. Denies apparent swelling in knees/ankle. Was recently pregnant so PT has been limited. She is 3 months post partum. Occasional hip and LBP.

Aggravating Factors\_sitting for long periods of time, bending, straightening

Easing Factors\_avoiding aggravating activities, movement

Pain Assessment (0-10 scale)

Current\_0

Best in the past week\_0

Worst in the past week\_4

Description Ache in knees, sharp in ankles

Duration: Intermittent

Patient Goal: Resolve pain

### **Chief Complaint**

Pregnancy centering LBP and hip pain

### **Subjective/History of Present Illness**

Pnt comes into centering class today with questions and concerns about LBP and hip pain

### **Objective/Physical Exam**

Patient attended the Pregnancy group class for instruction on physical activity during pregnancy and management/prevention of musculoskeletal disorders associated with pregnancy. Items covered in course include safe performance of exercise, injury prevention/management, and positioning and ADL modification during pregnancy. The following exercises were demonstrated:

Kegels

Abdominal Drawing in Maneuver

Pelvic tilts

Clams (side lying hip external rotator)

Side plank

Quadruped alternating arms and legs

Hamstring stretch

Hip Flexor stretch

Lumbar stretch

Manual therapy: performed on each patient, partner provided instructions on how to perform

Quadruped bilateral ilium compression

Hooklying lumbar distraction

Quadruped anterior sacral compression mobilization grade II and IV

Patient voiced understanding of all topics discussed.

Total class time: 60 minutes

### **Assessment/Plan**

1. Childbirth education done

Diagnosis: **1.** Childbirth education done

Comment:

Diagnosis: **2.** Pregnant

Comment:

2. Pregnant

Pt exhibits correct body mechanics with VCing and instruction on exercises. Pt tolerated treatment.

### **Goals**

No qualifying data available.

## OPERATIVE REPORT

**PREOPERATIVE DIAGNOSIS:** Symptomatic cholelithiasis

**POSTOPERATIVE DIAGNOSIS:** Symptomatic cholelithiasis

**OPERATION:** Laparoscopic cholecystectomy

**SURGEON:** Patricia Keefe, MD

**ASSISTANT:** OC Josh Angle, PA Student

**ANESTHESIA:** General

**ANESTHETIST:** D. Armstrong / M. O'Donnell, CRNA

**ANESTHESIA TIME:** 1034 - 1234

**OPERATIVE TIME:** 1056 - 1224

**CIRCULATING:** A. Blake, RN

**SCRUB:** M. Saunto

**DRAINS:** None

**SPONGE/NEEDLE COUNT:** Correct

**SPECIMENS REMOVED:** Gallbladder / **DISPOSITION:** Sent to Pathology

**ESTIMATED BLOOD LOSS:** Minimal

**COMPLICATIONS:** None

**TYPE OF SURGERY:** Major

**DATE OF SURGERY:** 15 Sep 2022

**INDICATIONS FOR OPERATION:** This is a patient who presented to the General Surgery Clinic after referral from our Emergency Department. She had had an episode of epigastric and right upper quadrant abdominal pain associated with nausea and vomiting. She had gallstones seen on imaging.

**FINDINGS:** There was a gallstone palpable in the most proximal aspect of the cystic duct. The cystic duct was identified. The more medial placed cystic artery was identified. During dissection, there was some spillage of biliary contents and the biliary fluid appeared infected in nature.

**DESCRIPTION OF OPERATION:** The patient was taken to the Operating Room and placed in the supine position. She was then placed under general endotracheal anesthesia. The abdomen was prepped and draped in the usual sterile fashion. An approximately 1 cm long supraumbilical incision was made. The open Hasson technique was used for placement of a 12 mm trocar. A pneumoperitoneum was established as the camera was inserted. The abdomen was examined. There was no evidence of injury to the underlying bowel or vasculature. Under direct visualization, an 11 mm port was placed into the epigastric region. Following this, two 5 mm ports were placed laterally in the right upper quadrant. Using the camera and instruments placed through the ports attention, attention was directed to the right upper quadrant. The gallbladder was identified, grasped, and elevated. The neck of the gallbladder was then

retracted in the standard direction. Dissection was carried out in the infundibular area in the standard lateral to medial direction. As the proximal aspect of the cystic duct was identified, there was a bulge consistent with a stone. This was also palpable. Blunt dissection was used to circumferentially isolate the cystic duct inferior to this stone. The more medially placed cystic artery was identified, but it was left intact at this time. The cystic duct was seen coursing directly into the inferior aspect of the gallbladder. The duct, after being thinned out, was too large to accommodate a medium-large clip. Thus, the epigastric port site was upstaged to a 12 mm port and the extra large clip applier was used. Four clips were placed across the cystic duct. It was divided, leaving three clips in situ. The more medially placed cystic artery was then circumferentially isolated. It was clipped x3 and divided, leaving two clips in situ. The gallbladder was then excised from the gallbladder bed of the liver. During dissection, the clip at the cystic duct on the gallbladder side did allow for some drainage of gallbladder contents into the operative area. This was rather thick and yellow in appearance. An additional clip was placed over this opening in the gallbladder wall and dissection was continued. The gallbladder was excised from the gallbladder bed of the liver using Bovie electrocautery. The gallbladder was placed into an Endobag; it was removed from the abdomen through the supraumbilical port site. Secondary to the enlarged stones within the gallbladder, this fascial opening had to be extended for an additional 1 cm. The port was then replaced. The right upper quadrant was irrigated and suctioned until the effluent was clear. The clips were examined; they were intact. Hemostasis was ensured. The Carter-Thomason closure device was used for placement of a Vicryl stitch to close the epigastric port site. All ports were then removed under direct visualization. There was no evidence of bleeding from the abdominal wall. The fascia of the supraumbilical port site was closed with multiple 0 Vicryl figure-of-eight sutures. The skin of this incision was closed with a combination of deep interrupted 3-0 Vicryl sutures and a 4-0 Monocryl subcuticular stitch. The remaining skin wounds were closed using a 4-0 Monocryl subcuticular stitch. Steri-Strips and sterile dressings were applied to all wounds. The patient tolerated the procedure without complication. She was extubated in the Operating Room and transferred postoperatively in stable condition.

***Transfer Notes***

\* Auth (Verified) \*

**Narrative:**

I: Notified by nursing staff of inter facility transfer going to KU L&D triage. Patient being transferred for follow up and intervention of fetal demise. Patient is a 24-year-old female who is complaining of vaginal bleeding since this afternoon. Patient has been following with L&D with fetal demise known for a couple of days. Accepting physician Dr. Thomas, M.D. Verbal report from Lindsay RN. Written orders from sending PA Marc Gabbitas, P.A. Include: BLS

C: Patient diagnosis of fetal demise.

H: Patient Presented at ER for vaginal bleeding following fetal demise. Patient is being transferred for specialized care not available at IACH.

A: Arrived to find patient supine in bed. Patient is Alert and oriented X4, respirations are normal, radial pulses are normal, skin is warm dry and perfuse. Patient described no trauma. The following medical procedures/treatments are in place. IV as shown. Secondary assessment:

General: Vital sign within normal limits. Patient is in no acute distress, Alert and oriented X 4, and answers all questions appropriately.

HEENT: Scalp is non-tender and without lesions or trauma. Pupils are equal reactive to light. Uvula is midline and airway is patent. Moist mucosa. No tri-poding, stridor or drooling.

CV: Regular rate w/o murmurs, rubs, or gallops. Radial pulse is full and equal bilaterally. Cap refill is < 2 seconds.

Pulmonary: No retractions, accessory muscle use or increased work of breathing. Lungs clear to auscultation.

Abdomen: Soft, non-tender to palpation, No masses palpated or seen. Normal for gestation.

Skin: has no lesions, no rashes or open wounds.

Psych: Mood and affect appropriate.

R: The following treatments were provided. Monitor patient V/S as shown in flow chart.

T: Patient was able to walk from bed to cot. Placed in semi-fowlers position, secured with seat belts x5. Patient loaded to ambulance and transported normal traffic, to KU L&D triage.

Treatments during transport vitals monitored as documented in flow chart. Patient transported without incident taken to room. Patient walked to bed. Verbal report given to Dana, RN

B. PHYSICIAN'S CERTIFICATE OF TRANSFER

I certify that based on the information available to me at the time of transfer, the medical benefits reasonably expected for the provision of appropriate medical care of another medical facility outweighs the increased risk to the individual (or unborn child in the case of labor) from effecting the transfer.

Reason for Transfer:

( ) Needed specialty care not available at this institution. Reason: \_\_\_\_\_

( ) Bed space unavailable.

( ) Professional staff not available to care for patient.

( ) Other: \_\_\_\_\_

Physicians Signature 

C. PATIENT CONSENT

I consent to transfer to another medical facility. I understand that it is the opinion of the physician responsible for my care that the benefits of transfer outweigh the risks of transfer. I have been informed of the risks and benefits upon which the transfer is being made. I have considered these risks and benefits and consent to transfer. I consent to the release of my medical records to the facility to which I am being transferred.

Signature of patient or responsible person: 

Date 12/20/22 Time 1841 Witness Liuyi Liu, RN

D. PATIENT INITIATED REQUEST FOR TRANSFER

After considering the above information I request upon my own suggestion and not that of the hospital, physician or any other person associated with the hospital that I, the patient, be transferred to: \_\_\_\_\_

Signature of patient or responsible person: \_\_\_\_\_

Date \_\_\_\_\_ Time \_\_\_\_\_ Witness \_\_\_\_\_

E. PATIENT REFUSAL

I understand that the hospital has offered to examine me to determine whether I am suffering from an emergency medical condition, to provide necessary treatment to stabilize my condition and to provide a medically appropriate transfer to another medical facility. The hospital and physician have informed me of the benefits and risks that I might reasonably be expected from the offered services. I understand that my refusal may result in worsening of my condition and could pose a threat to my life, health and medical safety. I refuse the offered services.

##### Mental Status

Level of Consciousness: Alert (12/20/22)

Patient Name: **Amieva, Yessenia**

MRN: 529321000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Womens Health Documents***

Orientation Assessment: Oriented x 4 (12/20/22)

### Cardiovascular

Cardiovascular Symptoms: **None** (12/20/22)

### Respiratory

Respiratory Symptoms: **None** (12/20/22)

Respirations: **Unlabored** (12/20/22)

Respiratory Pattern: **Regular** (12/20/22)

Respiratory Pattern ICU: **Regular** (12/20/22)

Oxygen Therapy: **Room air** (12/20/22)

SpO2: **98 %** (12/20/22)

Cough: **None** (12/06/22)

All Lobes Breath Sounds: **Clear** (12/20/22)

### Gastrointestinal

Appetite: **Fair** (12/12/22)

Abdomen Description: **Flat, Rounded** (12/20/22)

Abdomen Palpation: **Soft, Non-Tender** (12/20/22)

Bowel Sounds All Quadrants: **Active** (12/20/22)

Stool Description: **Liquid** (12/12/22)

### Extremities

#### Edema

Edema: **None** (12/20/22)

### Integumentary

Skin Color: **Normal for ethnicity** (12/20/22)

Skin Description: **Dry** (12/20/22)

Skin Temperature: **Warm** (12/20/22)

Skin Integrity General: **Intact** (12/20/22)

Amieva, Yessenia DOB: 05/19/98

## **Blood Types and Anti-D Immune Globulin**

### Blood Type and Screen

Mother ABO/Rh: --

Mother Antibody Screen: --

Father of Baby ABO/Rh: --

Father of Baby Antibody Screen: --

### Anti-D Immune Globulin

## **Womens Health Documents**

### **carboxymethylcellulose 0.5% (PF) eye drops UD [50EA]**

SIG: 1 drop(s), Eye-Both, every 2 hr, PRN, 50 EA, 6 Refill(s)

Ordered: 02/22/22

Provider: BAKER, ANGIE P, OD

### **naproxen 500 mg tablet**

SIG: 500 mg, Oral, BID, 20 EA, 0 Refill(s)

Ordered: 03/03/22

Provider: MORRISON, SEAN M, PA

### **Prenatal Multivitamins with Folic Acid 1 mg oral tablet**

SIG: 1 tab(s), Oral, Daily, 100 tab(s), 3 Refill(s)

Ordered: 07/06/21

Provider: KUNTZ, KYANNA SHELAR, CNM

### **Refresh Plus ophthalmic solution**

SIG: 1 drop(s), Eye-Both, every 2 hr, PRN: dry eyes, 50 EA, 6 Refill(s)

Ordered: 02/22/22

Provider: BAKER, ANGIE P, OD

Inactive or Suspended (Prescriptions and documented medications since 08/21/22)

### **Bentyl 10 mg oral capsule**

SIG: 2 cap(s), Oral, QID, for 7 days, 30 to 60 minutes before meals, 56 cap(s), 0 Refill(s)

Status: Discontinued

Ordered: 09/02/22

Provider: INGLE, STEPHEN JEROME, DO

### **Colace 100 mg oral capsule**

SIG: 1 cap(s), Oral, BID, 30 cap(s), 0 Refill(s)

Status: Discontinued

Ordered: 09/15/22

Provider: KEEFE, PATRICIA ANNE, MD

### **dicyclomine 10 mg capsule**

SIG: 20 mg, Oral, QID, 56 EA, 0 Refill(s)

Status: Discontinued

Ordered: 09/02/22

Provider: INGLE, STEPHEN JEROME, DO

### **docusate sodium 100 mg capsule**

SIG: 100 mg, Oral, BID, 30 EA, 0 Refill(s)

Status: Discontinued

Ordered: 09/15/22

Provider: KEEFE, PATRICIA ANNE, MD

### **oxyCODONE-acetaminophen 5 mg-325 mg tablet**

SIG: 1 tab(s), Oral, every 4 hr, 20 EA, 0 Refill(s)

Status: Discontinued

Ordered: 09/15/22

Provider: KEEFE, PATRICIA ANNE, MD

### **Percocet 5 mg-325 mg oral tablet**

SIG: See Instructions, take one or two every 4 hours as needed or pain, 20 tab(s), 0 Refill(s)

Status: Discontinued

Ordered: 09/15/22

Provider: KEEFE, PATRICIA ANNE, MD

### **Zofran ODT 4 mg oral tablet, disintegrating**

SIG: 1 tab(s), Oral, every 6 hr, PRN: nausea/vomiting, 20 tab(s), 0 Refill(s)

Status: Completed

Ordered: 12/12/22

Provider: SKINNER, ADAM M, MD

## **Medication Administrations In-Office/Hospital**

(All in-office/hospital administrated medications ordered since 08/21/22)

## **Prenatal Visit Diagnosis**

(Note: All diagnoses documented since 11/21/2022)

12/20/22 - Complete or unspecified spontaneous abortion without complication (ICD-10-CM: O03.9, Date: 12/20/22)

12/20/22 - Vaginal bleeding - < 20 wks pregnant (PNED: 5B658588-B5C9-48AF-AE24-6ED242C070F1, Date: 12/20/22)

12/19/22 - 14 weeks gestation of pregnancy (ICD-10-CM: Z3A.14, Date: 12/19/22)

12/12/22 - Dehydration (ICD-10-CM: E86.0, Date: 12/12/22)

12/12/22 - 15 weeks gestation of pregnancy (ICD-10-CM: Z3A.15, Date: 12/12/22)

12/12/22 - Noninfective gastroenteritis and colitis, unspecified (ICD-10-CM: K52.9, Date: 12/12/22)

12/12/22 - Gestational vomiting (PNED: CA70CE71-5639-45B0-8F24-A01EEA0A2205, Date: 12/12/22)

12/08/22 - EXAM/ASSESSMENT, OCCUPATIONAL, SERVICE MEMBER PERIODIC HEALTH ASSESSMENT (PHA) (ICD-10-CM: DOD0225, Date: 12/08/22)

12/07/22 - Other hemorrhage in early pregnancy (ICD-10-CM: O20.8, Date: )

12/07/22 - 14 weeks gestation of pregnancy (ICD-10-CM: Z3A.14, Date: )

12/07/22 - Other hemorrhage in early pregnancy (ICD-10-CM: O20.8, Date: )

12/07/22 - Other specified disorders of amniotic fluid and membranes, unspecified trimester, not applicable or unspecified (ICD-10-CM: O41.8X90, Date: 12/07/22)

12/07/22 - Pregnant state, incidental (ICD-10-CM: Z33.1, Date: 12/07/22)

12/07/22 - 14 weeks gestation of pregnancy (ICD-10-CM: Z3A.14, Date: 12/07/22)

12/06/22 - Antepartum hemorrhage, unspecified, second trimester (ICD-10-CM: O46.92, Date: 12/06/22)

12/06/22 - Other hemorrhage in early pregnancy (ICD-10-CM: O20.8, Date: 12/06/22)

12/06/22 - Hemorrhage in early pregnancy, unspecified (ICD-10-CM: O20.9, Date: 12/06/22)

12/06/22 - Vaginal bleeding - < 20 wks pregnant (PNED: 5B658588-B5C9-48AF-AE24-6ED242C070F1, Date: 12/06/22)

12/05/22 - Unspecified choroidal hemorrhage, unspecified eye (ICD-10-CM: H31.309, Date: 12/05/22)

12/05/22 - Unspecified abdominal pain (ICD-10-CM: R10.9, Date: 12/05/22)

12/05/22 - Spotting complicating pregnancy, unspecified trimester (ICD-10-CM: O26.859, Date: 12/05/22)

12/05/22 - UC - Vaginal Bleeding: < or = 20 wk Pregnancy (PNED: 43E4FB7B-6886-41A8-BC33-EA84B7B70318, Date: 12/05/22)

12/02/22 - EXAM, FORMAL OCCUPATIONAL HEALTH PROGRAM INCLUDING HEARING CONSERVATION PROGRAM, PERIODIC FOR CONTINUED SURVEILLANCE FOR OCCUPATIONAL WORKPLACE EXPOSURE (ICD-10-CM: DOD0215, Date: 12/02/22)

12/01/22 - Encounter for pregnancy test, result positive (ICD-10-CM: Z32.01, Date: 12/01/22)

12/01/22 - Other specified disorders of amniotic fluid and membranes, unspecified trimester, not applicable or unspecified (ICD-10-CM: O41.8X90, Date: 12/01/22)

12/01/22 - Encounter for screening for infections with a predominantly sexual mode of transmission (ICD-10-CM: Z11.3, Date: )

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## ***Womens Health Documents***

12/01/22 - Personal history of COVID-19 (ICD-10-CM: Z86.16, Date: )

12/01/22 - 14 weeks gestation of pregnancy (ICD-10-CM: Z3A.14, Date: )

12/01/22 - Encounter for supervision of other normal pregnancy, second trimester (ICD-10-CM: Z34.82, Date: )

12/01/22 - Encounter for supervision of other normal pregnancy, second trimester (ICD-10-CM: Z34.82, Date: )

12/01/22 - Encounter for screening for infections with a predominantly sexual mode of transmission (ICD-10-CM: Z11.3, Date: 12/01/22)

12/01/22 - 14 weeks gestation of pregnancy (ICD-10-CM: Z3A.14, Date: 12/01/22)

11/30/22 - 13 weeks gestation of pregnancy (ICD-10-CM: Z3A.13, Date: 11/30/22)

11/30/22 - Encounter for supervision of other normal pregnancy, unspecified trimester (ICD-10-CM: Z34.80, Date: 11/30/22)

11/30/22 - Encounter for childbirth instruction (ICD-10-CM: Z32.2, Date: 11/30/22)

11/26/22 - Other viral diseases complicating pregnancy, second trimester (ICD-10-CM: O98.512, Date: )

11/26/22 - COVID-19 (ICD-10-CM: U07.1, Date: )

11/26/22 - COVID-19 (ICD-10-CM: U07.1, Date: )

11/26/22 - 14 weeks gestation of pregnancy (ICD-10-CM: Z3A.14, Date: )

11/26/22 - COVID-19 (ICD-10-CM: U07.1, Date: 11/26/22)

11/26/22 - Medical problem reevaluation (PNED: 84D8D04B-E4E1-45BA-9BA9-A0156B6FFAD5, Date: 11/26/22)

11/19/22 - Encounter for pregnancy test, result positive (ICD-10-CM: Z32.01, Date: 11/21/22)

11/18/22 - Threatened abortion (ICD-10-CM: O20.0, Date: )

11/18/22 - Threatened abortion (ICD-10-CM: O20.0, Date: )

11/18/22 - 12 weeks gestation of pregnancy (ICD-10-CM: Z3A.12, Date: )

09/29/22 - Encounter for other specified surgical aftercare (ICD-10-CM: Z48.89, Date: )

## **Womens Health Documents**

SIG: 100 mg, Oral, every 12 hr, 60 EA, 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**docusate sodium 100 mg oral capsule**

SIG: 1 cap(s), Oral, every 12 hr, 60 cap(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ferrous sulfate 325 mg (65 mg elemental iron) oral tablet**

SIG: 1 tab(s), Oral, Daily, 30 tab(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ferrous sulfate 325 mg tablet**

SIG: 325 mg, Oral, Daily, 30 EA, 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ibuprofen 800 mg oral tablet**

SIG: 1 tab(s), Oral, every 8 hr, PRN: pain (mild), 90 tab(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**ibuprofen 800 mg tablet**

SIG: 800 mg, Oral, every 8 hr, PRN, 90 EA, 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

**Nora-BE (norethindrone) 0.35 tablet (28)**

SIG: 0.35 mg, Oral, Daily, 84 EA, 1 Refill(s)  
Ordered: 12/05/21 Provider: CHAFFIN, KIMBERLY ANN

**Ortho Micronor 0.35 mg oral tablet**

SIG: 1 tab(s), Oral, Daily, 84 tab(s), 1 Refill(s)  
Ordered: 12/05/21 Provider: CHAFFIN, KIMBERLY ANN

**prenatal multivitamins w/Folic Acid 1 mg tablet**

SIG: 1 tab(s), Oral, Daily, 100 EA, 3 Refill(s)  
Ordered: 07/13/21 Provider: KUNTZ, KYANNA SHELAR, CNM

**Prenatal Multivitamins with Folic Acid 1 mg oral tablet**

SIG: 1 tab(s), Oral, Daily, 100 tab(s), 3 Refill(s)  
Ordered: 07/06/21 Provider: KUNTZ, KYANNA SHELAR, CNM

**Tylenol 325 mg oral tablet**

SIG: 2 tab(s), Oral, every 4 hr, PRN: pain (mild), 100 tab(s), 0 Refill(s)  
Ordered: 12/03/21 Provider: GASTON, JULIA, MD

Inactive or Suspended (Prescriptions and documented medications since 11/25/20)

**benzoyl peroxide 2.5% topical liquid**

SIG: 1 appl(s), Topical, BID, 240 mL, 0 Refill(s)  
Status: Discontinued Ordered: 08/23/21 Provider: DRUMMOND, THOMAS JOSEPH, PA

**benzoyl peroxide 5% topical liquid [148g]**

SIG: 1 appl(s), Topical, BID, 148 g, 0 Refill(s)  
Status: Discontinued Ordered: 08/23/21 Provider: DRUMMOND, THOMAS JOSEPH, PA

**carboxymethylcellulose 0.5% (PF) eye drops UD [50EA]**

SIG: 1 drop(s), Eye-Both, TID, PRN, 50 EA, 11 Refill(s)  
Status: Discontinued Ordered: 07/13/21 Provider: HART, RUSSELL W, OD

**Keflex 500 mg oral capsule**

SIG: 1 cap(s), Oral, QID, for 7 days, 28 cap(s), 0 Refill(s)  
Status: Completed Ordered: 08/31/21 Provider: KUNTZ, KYANNA SHELAR, CNM

**Prenatal 1 (Historically recorded)**

SIG: 0 Refill(s)  
Status: Discontinued Ordered: 05/06/21 Provider: --

**Refresh Plus ophthalmic solution**

SIG: 1 drop(s), Eye-Both, TID, PRN: dry eyes, 50 EA, 11 Refill(s)  
Status: Discontinued Ordered: 07/13/21 Provider: HART, RUSSELL W, OD

**Unisom 25 mg oral tablet**

SIG: 1 tab(s), Oral, every day at bedtime, 120 tab(s), 1 Refill(s)  
Status: Completed Ordered: 05/06/21 Provider: LONG, JEFFERY R, MD

**Vitamin B6 50 mg oral tablet**

SIG: 1 tab(s), Oral, TID, 120 tab(s), 1 Refill(s)  
Status: Completed Ordered: 05/06/21 Provider: LONG, JEFFERY R, MD

**Zofran ODT 4 mg oral tablet, disintegrating**

SIG: 1 tab(s), Oral, TID, PRN: nausea, 30 tab(s), 1 Refill(s)  
Status: Completed Ordered: 05/06/21 Provider: LONG, JEFFERY R, MD

## **Medication Administrations In-Office/Hospital** (All in-office/hospital administrated medications ordered since 11/25/20)

**acetaminophen**

N/A, Once  
Status: Completed Ordered: 12/03/21 Provider: CONTRIBUTOR\_SYSTEM, RxHub

**Boostrix (Tdap) (tetanus/diphtheria/pertussis (Boostrix Tdap) 0.5 mL injection)**

0.5 mL, IntraMuscular, Vaccine  
Status: Completed Ordered: 09/28/21 Provider: KUNTZ, KYANNA SHELAR, CNM

**emollients, topical (lubricating jelly bacteriostatic topical gel)**

N/A, Once

## **Delivery Summary**

### **Baby A**

#### Membrane Status Information

ROM Date/Time: 12/03/21 00:56:00  
ROM Type: Artificial rupture of membranes  
Amniotic Fluid Color/Description: Clear  
Premature Rupture of Membranes: No  
Prolonged Rupture of Membranes: No

#### Labor Information

Length of Labor 2nd Stage Hrs Calc: 3.03 hr  
Length of Labor 2nd Stage: 182 minutes  
Length of Labor 3rd Stage: 4 minutes  
Labor Onset Methods: Spontaneous  
Precipitous Labor: No  
Prolonged Labor: No

#### Fetal Monitoring

FHR Monitoring Method: Telemetry

#### Delivery Information

Delivery Type: Vaginal  
Delivery of Head Date/Time: 12/03/21 05:49:00  
Date/Time of Birth: 12/03/21 05:49:00  
Placenta Delivery Date/Time: 12/03/21 05:53:00  
Placenta to Pathology: No  
Anesthetist: PLATZ, KELLIE M, DO  
Maternal Delivery Complications: None  
Delivery Physician: GASTON, JULIA, MD

#### Neonatal Information

Risk Factors: Meconium stained  
Neonate Complications: Meconium stained fluid  
Umbilical Cord Description: 3 vessel cord

#### Infant Data

Gender: Female  
ID Band Number: 92030  
Neonate Outcome: Live birth  
Security Tag Number: 675  
Birth Weight: 3.835 kg  
Apgar Score 1 Minute: 8  
Apgar Score 5 Minute: 9  
Pediatrician: CONROY, MELISSA J, DO

### **AP Specimens**

Legend: c=Corrected, @=Abnormal, C=Critical, L=Low, H=High, f=Result Comment, i=Interp Data, \*=Performing Lab

#### Textual Results

T1: 9/15/2022 11:56 CDT (AP Surgical Pathology)

Patient woke in the middle of the night last Friday with back pain. Soon the pain radiated to the front of her belly. She felt there was pain across her upper abdomen that seemed to be worse than the back pain. The back pain was still there.

#### Pre-Operative Diagnosis

Cholelithiasis.

#### Post-Operative Diagnosis

Cholelithiasis.

#### Gross Description

"Amieva, gallbladder," submitted in formalin is an intact and distended gallbladder measuring 13.5 cm in length, 3.0 cm in diameter at the neck, and 4.0 cm in diameter at the fundus. The serosal surface is gray to purple, smooth, and dull. The lumen contains a copious amount of watery and cloudy yellow to gray bile. Present within the lumen of the gallbladder is a 2.0 cm bosselated yellow-orange calculus. The mucosal surface is gray to pink and trabeculated. A mucosal mass or polyp is not grossly identified. The wall of the gallbladder ranges in thickness from 0.1 to 0.3 cm. The cystic duct is 1.0 cm in length x 0.8 cm in average diameter. Representative sections of the gallbladder to include a shave of the cystic duct resection margin are submitted in cassette A1. 1SS.

#### Specimen(s) Received

cervical cytology

#### Final Diagnosis

Thin Prep Cervical Cytology (with reflex HPV):

Satisfactory for evaluation; partially obscuring inflammation.

Negative for intraepithelial lesion or malignancy.

Comment: A pap test is a screening diagnostic procedure that is not highly sensitive or specific; there are acknowledged false positive and false negative results. Adjunctive studies may be required as clinically indicated.

**Interpretive Data**

i1: eGFR CKD EPI

Estimated Glomerular Filtration Rate (eGFR) calculated using the 2021 Chronic Kidney Disease-Epidemiology (CKD-EPI) Collaboration creatinine equation; units of measure are mL/min/1.73 m<sup>2</sup>.

Results are only valid for adults ( $\geq 18$  years) whose serum creatinine is in steady state. eGFR calculations are not valid for patients with acute kidney injury and for patients on dialysis. Creatinine-based estimates of kidney function may also be inaccurate in patients with reduced creatinine generation due to decreased muscle mass (e.g., malnutrition, severe hypoalbuminemia, sarcopenia, chronic neuromuscular disease, amputations, severe heart failure or liver disease) and in patients with increased creatinine generation due to increased muscle mass (e.g., muscle builders, anabolic steroids) or increased dietary intake.

As drug clearance is proportional to total GFR and not GFR indexed to body surface area (BSA), in individuals with a BSA substantially different than 1.73 m<sup>2</sup>, drug dosing should be based the reported eGFR value de-indexed from BSA by multiplying by the individual's BSA and dividing by 1.73.

CKD is diagnosed based on abnormalities of kidney structure or function, present for  $> 3$  months, with implications for health and disease. CKD is classified and staged based on cause, eGFR and albuminuria (quantified as urine albumin to creatinine ratio). An eGFR  $> 60$  mL/min/1.73 m<sup>2</sup> in the absence of increased urine albumin excretion or structural abnormalities does not represent CKD.

## Result Comments

f1: DNA Double Strand Ab.LC

Negative <5  
 Equivocal 5 - 9  
 Positive >9

f2: Lupus Rflx Interp LC

No lupus anticoagulant was detected.  
 Performed At: 01 Labcorp Phoenix  
 5005 S 40th Street Ste 1200 Phoenix, AZ 850402969  
 Collum Earle S MD Ph:8007889743  
 Performed At: 02 Labcorp Burlington  
 1447 York Court Burlington, NC 272153361  
 Nagendra Sanjai MD Ph:8007624344

f3: ANA Direct LC

Performed At: 01 Labcorp Dallas  
 7777 Forest Ln Bldg C350 Dallas, TX 752302544  
 Etufugh CN MD Ph:9725986000

f4: Rubeola Ab IgG LC

Negative <13.5  
 Equivocal 13.5 - 16.4  
 Positive >16.4

Presence of antibodies to Rubeola is presumptive evidence of immunity except when acute infection is suspected.

f5: Mumps Ab IgG LC

Negative <9.0  
 Equivocal 9.0 - 10.9  
 Positive >10.9

A positive result generally indicates past exposure to Mumps virus or previous vaccination.

f6: Rubella Abs IgG LC

Non-immune <0.90  
 Equivocal 0.90 - 0.99  
 Immune >0.99

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

#### Result Comments

f7: VZV IgG LC

Negative	<135
Equivocal	135 - 165
Positive	>165

A positive result generally indicates exposure to the pathogen or administration of specific immunoglobulins, but it is not indication of active infection or stage of disease.

Performed At: 01 Labcorp Overland Park

## Newborn Screening

Legend: c=Corrected, @=Abnormal, C=Critical, L=Low, H=High, f=Result Comment, i=Interp Data, \*=Performing Lab

### Result Comments

f1: AFP Comment LC

Multiples Of Median Cutoffs

For AFP Elevations

Singleton 2.5 Black 2.8

IDD 2.0 Twins 4.5

Abbreviation Definitions

IDD - Insulin Dep Diabetes

OSBR - Open Spina Bifida Risk

For further inquiries contact LabCorp  
Genetics Services at 1-800-345-GENE.

This test was developed and its performance characteristics determined by Labcorp. It has not been cleared or approved by the Food and Drug Administration.

Performed At: 01 Labcorp RTP

1912 TW Alexander Drive RTP, NC 277090150

Chenn Anjen MDPhD Ph:8007354087

f2: AFP Gestat Age Based on LC

06/01/2023

Recalculations are not recommended when gestational dating by LMP and ultrasound are within 10 days.

f3: AFP Interpretation LC

Interpretation: Screen Negative

This result is screen negative for fetal OSB. The AFP MoM calculated is based on the gestational age provided. MS-AFP can identify up to 80% of open fetal neural tube defects. Closed neural tube defects and some open defects may not be detected by this test. This test does not screen for fetal Down Syndrome or Trisomy 18. If screening for Down Syndrome or Trisomy 18 is desired, contact Genetic Customer Services to discuss available options. The American College of Obstetricians and Gynecologists recommends amniocentesis be offered to women age 35 and older.

## Result Comments

f1: HIV-1/2 AG/AB 4G CDD LC

Performed At: 1 CENTER FOR DISEASE DETECTION  
 11603 CROSSWINDS WAY SUITE 100 SAN ANTONIO, TX 78265  
 SKELLEY DEAN PHD Ph:8888588663

## Interpretive Data

i1: Chlamydia Scrn, GC Scrn

The Aptima Combo 2 Assay is a target amplification nucleic acid probe test that utilizes target capture for the in vitro qualitative detection and differentiation of ribosomal RNA (rRNA) from Chlamydia trachomatis (CT) and/or Neisseria gonorrhoeae (GC) in female cervical/vaginal swabs, male urethral swabs, and male urine specimens to aid in the diagnosis of chlamydial and/or gonococcal urogenital disease using the Panther System.

Female urine has been validated by Madigan Army Medical Center. A first catch urine specimen is acceptable, but may detect up to 10% fewer infections when compared with vaginal and endocervical swab specimens. Performance characteristics for female urine samples were determined by Madigan Army Medical Center. The limit of detection for female urine samples is 1.25 IFU/mL for CT and 12.5 GC cells/mL for GC.

Patient Name: **Amieva, Yessenia**

MRN: 5293210000001

DOD ID (EDIPI): 1548801377

Sex/DOB/Age: Female 5/19/1998 25 years

Veterans ID (ICN):

## **Infectious Disease**

Legend: c=Corrected, @=Abnormal, C=Critical, L=Low, H=High, f=Result Comment, i=Interp Data, \*=Performing Lab

### Interpretive Data

i1: Chlamydia Scrn, GC Scrn

A positive result indicates that DNA of Chlamydia trachomatis (CT) and/or Neisseria gonorrhoeae (GC) is present in the specimen tested and strongly supports a diagnosis of chlamydial/gonorrhreal infection. For those patients for whom a false positive result may have adverse psycho-social impact, the CDC recommends retesting IAW regulations/SOP.

A negative result indicates that DNA for CT and/or GC was not detected in the specimen. A negative result does not exclude the possibility of infection. Improper specimen collection, concurrent antibiotic therapy, presence of inhibitors, or low number of organism in the specimen may cause false negative results. When clinical indications strongly suggest gonococcal or chlamydia infection, additional specimens should be collected for testing. A result of indeterminate indicates that a new specimen should be collected and submitted for further testing.

The performance of the Aptima 2 Assay has not been evaluated in pregnant women and adolescents less than 14 years. The Aptima Combo 2 Assay is not intended for the evaluation of suspected sexual abuse or for other medico-legal indications. The assay has not been evaluated with patients who are currently being treated with antimicrobial agents active against CT or GC. In general, this assay should not be used to assess therapeutic success or failure since nucleic acids from these organisms may persist for 3 weeks or more following antimicrobial therapy. Results should be interpreted in conjunction with other laboratory and clinical information.

i2: SARS-CoV-2 PCR

### **Results Interpretation:**

Positive = SARS-CoV-2 was detected in the sample

Negative = SARS-CoV-2 was not detected in the sample

Presumptive Positive = SARS-CoV-2 may be present but result is unable to be verified. Recommend recollect and repeat on a different day.

**\*NOTE:** A Result of Negative does not definitively rule out infection with SARS-CoV-2 as the viral load may be below the detectable level for this test. If patients are still symptomatic, they should be retested on a different day.

### **Test Performed on Cepheid GeneXpert.**

### **Limitations:**

Performance of the Xpert Xpress SARS-CoV-2 has only been established in nasopharyngeal swab specimens. Specimen types other than nasopharyngeal swabs may give inaccurate results.

A false negative result may occur if a specimen is improperly collected, transported, or handled. False negative results may also occur if inadequate numbers of organisms are present in the specimen, bacterial or viral.

\*\*\*Electronically Signed \*\*\*

bsg/9/24/2022 CPT Brittney S. Graham, DO

#### **Clinical Diagnosis and History**

Patient woke in the middle of the night last Friday with back pain. Soon the pain radiated to the front of her belly. She felt there was pain across her upper abdomen that seemed to be worse than the back pain. The back pain was still there.

#### **Pre-Operative Diagnosis**

Cholelithiasis.

#### **Post-Operative Diagnosis**

Cholelithiasis.

#### **Gross Description**

"Amieva, gallbladder," submitted in formalin is an intact and distended gallbladder measuring 13.5 cm in length, 3.0 cm in diameter at the neck, and 4.0 cm in diameter at the fundus. The serosal surface is gray to purple, smooth, and dull. The lumen contains a copious amount of watery and cloudy yellow to gray bile. Present

Veterans ID (ICN):

### ***Surgical Pathology***

within the lumen of the gallbladder is a 2.0 cm bosselated yellow-orange calculus. The mucosal surface is gray to pink and trabeculated. A mucosal mass or polyp is not grossly identified. The wall of the gallbladder ranges in thickness from 0.1 to 0.3 cm. The cystic duct is 1.0 cm in length x 0.8 cm in average diameter.

Representative sections of the gallbladder to include a shave of the cystic duct resection margin are submitted in cassette A1. 1SS.

Accession 00057-US-22-0029501	Exam Date/Time 12/20/2022 14:40 CST	Exam US OB Limited	Ordering Physician GABBITAS,ROBERT L	Patient Age at Exam 24 years
----------------------------------	--	-----------------------	---	---------------------------------

**Reason for Exam**

(US OB Limited) Vaginal Bleeding

**Report**

EXAM: US OB Limited

COMPARISONS: OB US 11/18/2022

TECHNIQUE: Transabdominal OB ultrasound was performed.

INDICATION: Vaginal Bleeding

FINDINGS: Intrauterine pregnancy without fetal heart rate noted on this exam.

The placenta is anterior with no evidence of placenta previa. Cervix is closed.

Fetal biometric measurements are as follows: Not performed

Composite estimated gestational age based on today's measurements: 15w6d

Impression:

Intrauterine pregnancy without fetal heart rate noted on this exam. Finding is consistent with fetal demise.

Above finding was discussed with Dr. Gabbitas by Dr. Yoon via telephone 12/20/2022 3:09 PM.

## ***Ultrasound***

### **Report**

#### **PELVIC SONOGRAM**

Ultrasound of the pelvis was assessed with gray scale and color doppler.

Prior study: None.

#### **Findings:**

There is a single intrauterine gestational sac contains a fetal pole.

Crown-rump length measures 5.5 cm corresponding with 12 weeks and 1 days.

Estimated date of delivery is 6/1/2023. Fetal heart rate measures 183 bpm.

There is a complex hypoechoic heterogeneous structure lower uterine segment measuring 4.4 x 4.4 x 3.2 cm most consistent with a subchorionic bleed.

The right ovary measures 3.4 x 1.6 x 3.7 cm. The left ovary measures 3.3 x 2.1 x 2.4 cm. There is Doppler flow within the right and left ovary. There is no adnexal mass. There is no free fluid in the cul de sac.

**IMPRESSION:** Single live intrauterine gestation corresponding with 12 weeks and 1 days. Large complex subchorionic bleed lower uterine segment, and consider short-term follow-up.

#### **Report**

abdomen were obtained limited to the right upper quadrant.

Comparisons: None available.

Findings:

The gallbladder wall thickness is 2 mm. 1.8 cm gallstone at the gallbladder fundus. No pericholecystic fluid. Negative sonographic Murphy sign. The common bile duct measures 5.8 mm in diameter at the porta hepatis. No visualized choledocholithiasis. Normal caliber main portal vein with normal hepatopetal flow. The remaining interrogated structures in the right upper quadrant are unremarkable.

IMPRESSION: Cholelithiasis. No sonographic evidence of cholecystitis. The common bile duct is at the upper limits of normal in caliber. No visualized choledocholithiasis.
